Please reject PacifiCorp's latest integrated resource plan which continues to invest in antiquated coal plants. Rather, demand PacifiCorp develop a modern plan that includes utility-scale solar photovoltaic projects. Utah's solar resource is among the country's best and we must take advantage of solar PV projects with our vast, underutilized, wide-open spaces. Utility-scale solar is cheaper and healthier than coal. Solar means clean, abundant and affordable energy. Let's show PacifiCorp that Utah will lead the way into our clean energy future.
