I chose to invest in solar panels on my house this past year. I installed enough panels to cover between 50-75% of my power use. I'm not rich, and I'm not an idealist tree-hugger. It's just become clear that our air quality and climate are degrading, and that a different approach to powering our lives is needed now. I want Pacificorp and Rocky Mountain Power to make the same investment in transitioning to clean energy. Instead of investing in upgrading outdated carbon and mercury spewing coal plants, it is time to make a significant investment in the future of energy: wind and solar. I'm not asking for much, I'm not asking for 100% conversion. I'm asking for RMP to choose to work towards a cleaner, more liveable environment by committing the billion dollar investment to industrial scale wind and solar installations instead of coal plants.
