To: psc@utah.gov

I'm writing to express my concern that PacifiCorp's latest resource plan would continue investments in aging coal plants, putting ratepayers on the hook for as much as 1.3 billion dollars over the next decade to prolong the lives of over a dozen coal plants.

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year.

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. Instead, please demand that PacifiCorp come up with a new plan that takes advantage of our state's bountiful renewable resources and decreases our reliance on risky coal.

Do you not see the air in the Salt Lake Valley in the winter? Do you like to breath fresh air? Thats because you're sitting behind your desk in your office thinking about how you can make more money through the dirtiest form of energy we have created and almost fully rely on in this state. Face it, coal is far outdated and you are really looking like assholes for not giiving a shit about the planet. There are much cleaner ways of producing energy, yet you're too caught up in the money to not think about how your childrens children may not be able to go outside without choking to death.

I'm writing to express my concern that PacifiCorp's latest resource plan would continue investments in aging coal plants, putting ratepayers on the hook for as much as 1.3 billion dollars over the next decade to prolong the lives of over a dozen coal plants.

To: psc@utah.gov

I'm writing to express my concern that PacifiCorp is moving in the wrong direction in terms of investing my utility dollars. They want me - and other rate payers - to pay for investments in 12 aging coal plants, to the tune of \$1.3 billion over the next 10 years.

This is the wrong place to spend \$1.3 billions. PacifiCorp needs to be investing in wind and solar. Wind is the cheapest form of electricity and utility scale solar projects are competitive with fossil fuels and becoming cheaper each year.

Please reject PacifiCorp's preferred portfolio that focuses on out-dated fossil fuels and does not move us fast enough in the direction of clean energy. It truly is our future.

Thank you!

I am hoping that common sense will prevail when considering future power sources for our state. It is indisputable that our state of Utah has enormous potential to harvest solar energy. For that reason investing in solar research and development and by employing current technological means to harvest this energy now is not only prudent but essential for future healthy development and growth in Utah. I am counting on you to make the correct decision. Our future is in your hands.

**Dr. Jack W. Sites, Jr.** <jack\_sites@byu.edu>

Wed, Aug 12, 2015 at 11:16 AM

Reply-To: jack\_sites@byu.edu

To: psc@utah.gov

I'm writing to express my absolute dismay that PacifiCorp's latest resource plan would continue investing in aging coal plants when these should be phased out as rapidly as possible, while we shift to wind and especially solar sources to hasten the US transition to Green Energy. Further, PacifiCorp's plan will soak Utah ratepayers for well over one billion dollars over the next decade to extend the operation of out-moded coal plants. Why not retire one coal plant each year, and invest the 100 million saved by this move into non-carbon sources of energy?

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year. The transition is on the way and Rocky Mountain Power should be doing EVERYTHING possible to hasten this shift!!!

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. Instead, please demand that PacifiCorp come up with a new plan that takes advantage of our state's bountiful renewable resources and decreases our reliance on risky coal.

I'm writing to express my concern that PacifiCorp's latest resource plan would continue investments in aging coal plants, putting ratepayers on the hook for as much as 1.3 billion dollars over the next decade to prolong the lives of over a dozen coal plants.

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year. The counties that currently produce Utah coal (Carbon and Emery) could become the areas where PacifiCorp starts investing in 21st century technology energy jobs like a wind or solar farms. Why invest over a billion dollars in outmoded technology that pollutes our air and water? Is it because these are taxpayer and consumer dollars?

Please reject PacifiCorp's preferred portfolio which tethers Utahns to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. Instead, please demand that PacifiCorp come up with a new plan that takes advantage of our state's bountiful renewable resources and decreases our reliance on risky coal. We can do so much better in providing for our future energy needs and future jobs.

I'm writing to express my concern that PacifiCorp's latest resource plan would continue investments in aging coal plants, putting ratepayers on the hook for as much as 1.3 billion dollars over the next decade to prolong the lives of over a dozen coal plants.

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year.

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. Instead, please demand that PacifiCorp come up with a new plan that takes advantage of our state's bountiful renewable resources and decreases our reliance on risky coal.
