

## Exhibit A-1

Currently, no lines are constructed to Customer "A" or Customer "B" (as shown in the purple and red lines above); however, estimates were compared between Rocky Mountain Power (red line) and Mt. Pleasant (purple line) as depicted above. Although the Rocky Mountain Power existing facilities are closer to the new customers, the estimate for Mt. Pleasant was more than \$24,000 less so it was determined that the more economical course would be to allow Mt. Pleasant to serve the customers.
