

1 **Q. Please state your name, business address and present position with Rocky**
2 **Mountain Power ("the Company"), a division of PacifiCorp.**

3 A. My name is Douglas L. Marx. My business address is 1407 West North Temple,
4 Salt Lake City, UT 84095. I am the Director of Engineering Standards and
5 Technical Services for the Company.

6 **QUALIFICATIONS**

7 **Q. Briefly describe your educational and professional background.**

8 A. I have worked for the Company for 35 years in various engineering, operations and
9 management positions. I hold a bachelor's degree in electrical engineering from the
10 University of Utah and a master's degree in business administration from Utah
11 State University. I am a licensed professional engineer in the state of Utah.

12 **Q. What are your responsibilities as Director of Engineering Standards and**
13 **Technical Services?**

14 A. I oversee all non-routine technical studies including distributed generation, power
15 quality and smart grid reports. I am responsible for the development of all material
16 and equipment specifications and standards used in the construction and
17 maintenance of the transmission and distribution systems.

18 **PURPOSE OF TESTIMONY**

19 **Q. What is the purpose of your testimony in this proceeding?**

20 A. My testimony supports: (1) the Company's proposed Advanced Substation
21 Metering Program described in the Application, and included as Exhibit C thereto;
22 and (2) the Company's proposed Solar and Energy Storage Technology Program
23 described in the Application, and included as Exhibit D thereto. The Company

24 respectfully requests the Commission approve the Advanced Substation Metering
25 project pursuant to U.C.A. § 54-20-105(1)(c) and (h), as an electric grid related
26 project and an innovative utility program in the interest of the Company's utility
27 customers. The Company also respectfully requests the Commission approve the
28 Solar and Energy Storage Technology project pursuant to U.C.A. § 54-20-105(1)(c)
29 and (h), as both a battery storage or electric grid related project and an innovative
30 utility program in the interest of the Company's utility customers.

31 **ADVANCED SUBSTATION METERING PROGRAM**

32 **Q. Please describe the Company's proposed Advanced Substation Metering**
33 **Program.**

34 A. The Advanced Substation Metering project, if authorized, will enable the Company
35 to purchase and install advanced substation meters at approximately 50 circuits
36 connected to distribution substations in order to enable greater data visibility of the
37 distribution system and integration of distributed generation resources. The
38 Company is requesting authorization of \$1.1 million over the five-year STEP pilot
39 for this project. A full description of the proposed Advanced Substation Metering
40 Program is included as Exhibit C to the Application. The substation monitoring and
41 measurement of various electrical quantities will provide information necessary for
42 the development of a more progressive electric grid, in particular for the integration
43 of distributed generation resources. Data collection and analysis at substations will
44 be of paramount importance as the Company continues to integrate the rapid growth
45 of distributed energy resources into its system.

46 **Q. What benefits will the program provide?**

47 A. In addition to providing a greater understanding of innovative solutions that will
48 allow the Company to make the grid more progressive, the program will also enable
49 the Company to manage increasing levels of distributed energy resources on the
50 power grid in an affordable and reliable way by providing increased visibility on
51 loading levels, load shape and event information needed to develop thorough
52 interconnection studies and hosting capacities for customers; determining safe
53 switching procedures; and cost effective capital improvement plans in the future,
54 as well as helping the Company identify and control risks associated with the
55 integration of significant penetration of distributed energy resources. The
56 management of distribution resources is a critical technological issue that the
57 Company needs to gain as much information on to protect the system and its
58 customers.

59 **SOLAR AND ENERGY STORAGE TECHNOLOGY PROGRAM**

60 **Q. Please describe the Company' proposed Solar and Energy Storage**
61 **Technology Program.**

62 A. Pursuant to the STEP legislation, the Company is requesting authorization to use
63 \$5.05 million of the STEP funding to install a stationary battery system, to be
64 connected to one or both of the 12.5 kilovolt distribution circuits connected to a
65 Company-owned substation in central Utah. In addition, the Company proposes to
66 utilize an additional \$1.95 million from Blue Sky community funds to install a
67 large-scale, company-owned solar project in conjunction with the battery
68 installation. The storage and solar technology is expected to defer or eliminate the

69 need for traditional capital investments, and will reduce the loading on the power
70 transformer, improve voltage conditions and mitigate costs associated with
71 connection on the 69 kilovolt bus at the substation. A full description of the
72 proposed Solar and Energy Storage Technology Program is included as Exhibit D
73 to the Application.

74 **Q. What kind of benefits will the program provide?**

75 A. The program will provide a number of benefits to the Company's customers. The
76 benefits include: (1) reducing load on the transformer at the substation, ensuring
77 the voltage on the transmission line does not drop below ANSI standards; (2)
78 providing high-speed reactive power support to ensure load rejection in the area
79 does not impact voltage levels; (3) deferring the need for traditional capital
80 investment; (4) enabling the Company to get first-hand operational experience with
81 control algorithms and efficiency levels associated with energy storage combined
82 with solar; (5) enabling the Company to become familiar with and utilize innovative
83 technologies to provide customers with solutions to power quality issues; and (6)
84 providing an opportunity for the Company to meet requests from its Blue Sky
85 customers for physical “steel in the ground” renewable facilities. The Company
86 anticipates that the application of combined solar and battery storage projects may
87 exist in the future, and experience with the technology will provide the Company
88 with valuable insight into how the two technologies interact, and how the Company
89 could implement future projects more efficiently.

90 **CONCLUSION**

91 **Q. Please summarize the proposal for Solar and Energy Storage contained in this**
92 **Application.**

93 A. The Company consistently implements reliability and power quality enhancements
94 on its transmission and distribution system to mitigate system operation problems.
95 This project enables us to not only correct a voltage issue with an innovative
96 technology in lieu of traditional infrastructure, but it provides a platform to
97 objectively study and enhance the operational performance of a technology that will
98 begin to permeate the system as more renewable and distributed generation systems
99 are connected to the future grid.

100 **Q. Please summarize the proposal for the Advanced Substation Metering**
101 **Program contained in this Application.**

102 A. As the energy sector moves towards more distributed renewable resources,
103 advanced data will be needed about the distribution systems to enable us to more
104 readily connect these generation sources. This project will provide the information
105 necessary for the development of a more progressive electric grid and for the
106 integration of distributed generation resources.

107 **Q. In your opinion, are these two projects consistent with STEP and in the interest**
108 **of Rocky Mountain Power's customers?**

109 A. Yes.

110 **Q. Does this conclude your direct testimony?**

111 A. Yes.
