Dear Public Service Commission,

Please reject Rocky Mountain Power's proposal to implement demand charges on solar customers. Demand charges are confusing and extreme.

Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state's regulatory body or withdrawn entirely.

Solar customers and businesses need certainty. RMP's proposal puts local solar jobs across the state at risk. Please reject RMP's demand charges proposal and keep existing rates for rooftop solar customers.

Regards,
James Haslam

To: Utah Public Service Commission <psc@utah.gov>

Dear Public Service Commission,

As a ratepayer in Utah, I urge you to please reject Rocky Mountain Power's solar proposal, which will endanger the growth of the solar industry and threaten local jobs across the state. RMP's extreme demand charge proposal will make it difficult for me and my family to control our energy bills.

Another Berkshire Hathaway subsidiary, NV Energy, proposed similar demand charges on solar customers last year, and the Nevada Public Utilities Commission rejected the implementation of those charges. Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state's regulatory body or withdrawn entirely.

Please reject Rocky Mountain Power's proposal to implement these unprecedented and unpredictable charges on solar customers. I urge you to support balanced policies that will spur market competition and local economic growth, and bolster consumer choice.

Dear Public Service Commission,

Please reject Rocky Mountain Power's proposal to implement demand charges on solar customers. Demand charges are confusing and extreme.

Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state's regulatory body or withdrawn entirely.

Solar customers and businesses need certainty. RMP's proposal puts local solar jobs across the state at risk. Please reject RMP's demand charges proposal and keep existing rates for rooftop solar customers.

Regards,
Timothy Fleming

Dear Public Service Commission,

As a ratepayer in Utah, I urge you to please reject Rocky Mountain Power's solar proposal, which will endanger the growth of the solar industry and threaten local jobs across the state. RMP's extreme demand charge proposal will make it difficult for me and my family to control our energy bills.

Another Berkshire Hathaway subsidiary, NV Energy, proposed similar demand charges on solar customers last year, and the Nevada Public Utilities Commission rejected the implementation of those charges. Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state's regulatory body or withdrawn entirely.

Please reject Rocky Mountain Power's proposal to implement these unprecedented and unpredictable charges on solar customers. I urge you to support balanced policies that will spur market competition and local economic growth, and bolster consumer choice.

Dear Public Service Commission,

Please reject Rocky Mountain Power's proposal to implement demand charges on solar customers. Demand charges are confusing and extreme.

Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state's regulatory body or withdrawn entirely.

Solar customers and businesses need certainty. RMP's proposal puts local solar jobs across the state at risk. Please reject RMP's demand charges proposal and keep existing rates for rooftop solar customers.

Regards,

Dianne Gaschler

Dear Public Service Commission,

As a ratepayer in Utah, I urge you to please reject Rocky Mountain Power's solar proposal, which will endanger the growth of the solar industry and threaten local jobs across the state. RMP's extreme demand charge proposal will make it difficult for me and my family to control our energy bills.

Another Berkshire Hathaway subsidiary, NV Energy, proposed similar demand charges on solar customers last year, and the Nevada Public Utilities Commission rejected the implementation of those charges. Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state's regulatory body or withdrawn entirely.

Please reject Rocky Mountain Power's proposal to implement these unprecedented and unpredictable charges on solar customers. I urge you to support balanced policies that will spur market competition and local economic growth, and bolster consumer choice.

Dear Public Service Commission,

I am a customer of Rocky Mountain Power who is currently on a net metering account due to my connected solar power system. I am opposed to any modification of the current PSC rate structure especially if it would implement demand charges as the basis for rates. I am also opposed to additional fees applied to solar customers. I have had my solar system in operation for two years and have witnessed a steady and stealthy upward trend in rates for solar customers as RMP tries to offset our declined use of power.

Another Berkshire Hathaway subsidiary, NV Energy, proposed similar demand charges on solar customers last year, and the Nevada Public Utilities Commission rejected the implementation of those charges. Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state's regulatory body or withdrawn entirely.

Please reject Rocky Mountain Power's proposal to implement these unprecedented and unpredictable charges on solar customers. I urge you to support balanced policies that will spur market competition and local economic growth, and bolster consumer choice.

Dear Public Service Commission,

Please do not support Rocky Mountain Power's proposal to increase rates for solar power. Solar power in Utah is exactly the perfect solution for clean energy and the employment this growing industry provides.

Dear Public Service Commission,

Please reject Rocky Mountain Power's proposal to implement demand charges on solar customers. Demand charges are confusing and extreme.

Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state's regulatory body or withdrawn entirely.

Solar customers and businesses need certainty. RMP's proposal puts local solar jobs across the state at risk. Please reject RMP's demand charges proposal and keep existing rates for rooftop solar customers.

Dear Public Service Commission,

I am a ratepayer in Utah. Please reject Rocky Mountain Power's solar proposal: Utah is in a fair position to be a solar industry leader, with many local jobs across the state. Do we want to wean ourselves of fossil fuel, and become energy independent? It won't happen if we let the local utility price it out of reach. Nevada Public Utilities Commission rejected the implementation of similar charges. Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state's regulatory body or withdrawn entirely.

Please reject Rocky Mountain Power's proposal to implement these unprecedented and unpredictable charges on solar customers. I urge you to support balanced policies that will spur market competition and local economic growth, and bolster consumer choice.
