opposition to PacifiCorp-RMP's "Advice No. 16-13",1 message

Fred Davis <DAVISFR@uvu.edu>
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 5:01 PM

To: Public Service Commission

As a solar power customer I am in opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

To: psc@utah.gov

Dear Commissioners,

I oppose "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers.

It is problematic on many levels:

- It implies a grandfathering system that will be troublesome to administer and to qualify homeowners for.
- There is not sufficient outside input on the cost/benefit of the proposal and not enough time to evaluate this.
- Raising rates for one type of user instead of all users of the grid breaks the promise to enhance infrastructure and spread its cost across all users.
- The change appears to be designed to stop solar adoption which will have the side effect of slowing attempts to use clean energy at a time when we need to be accelerating it.

Thank you for accepting our comments.

To: Utah Public Service Commission

Docket No.: 16-035-T14

Subject: Public Comments--Rocky Mountain Power will stifle rooftop solar without even having to raise rates

Rocky Mountain Power is attempting to keep Utahans from installing rooftop solar without even having to raise rates. Two weeks ago, it asked this Commission to allow a retroactive rate and fee increase for new rooftop solar customers, and its request comes with a shortened timeline, an insufficient cost-benefit analysis, and no public witness hearing. Even though this Commission is yet to determine whether Rocky Mountain Power will be successful in its 2014 proposal to raise fees and increase rates for solar customers (see Docket #14-035-114), the power company wants to set a deadline of December 9, 2016: those who apply for net metering after this date will be subject to the proposed increases if such increases are granted by this Commission after the hearing on August 14-18, 2017.

But even if rates and fees remain as-is after August 2017, the solar industry--and therefore our air quality--will suffer in the meantime. Rocky Mountain Power itself stated that "the net metering program has experienced exponential growth since the Company's initial request for a fixed net metering facilities charge in the 2014 GRC" (RMP cover letter, page 3). There has been "a growth rate of 200 percent in just two years," and "a 160 percent growth in just one year" at the close of 2016 (*Id.*). Growth in Utah's solar industry is exactly what the country, our state, and our cities have been wanting and hoping for; what other reason would the state and federal governments provide such generous energy tax credits but to make solar a more economically viable option for more citizens? Rocky Mountain Power itself has contributed to this endeavor. But now that the very thing we have all been working toward is starting to occur, Rocky Mountain Power wants to stop it in its tracks without sufficient justification, without a public witness hearing, and without a sufficient cost-benefit analysis. The fact that so many are using solar is not a justifiable reason for this Commission to determine that those who have not yet purchased solar will suffer the uncertainty of higher rates/fees in the upcoming months before the Commission's determination of the proposal in Docket #14-035-114.

We are all solar customers--the sun is available for all of Rocky Mountain Power's customers and, therefore, we should not delineate between those who have rooftop solar panels now and those who are yet to install them. The same requirements to which Rocky Mountain Power must adhere for raising rates/fees for some or all of its net metering customers should also apply to its request to retroactively raise rates/fees for customers who install solar between December 10, 2016, and August/September of 2017. Almost a year of stifled solar will affect our health and our jobs, and I urge the Commission to reject Rocky Mountain Power's proposal under Docket #16-035-T14.

Thank you for your consideration in this very important matter.

To: psc@utah.gov

Dear Commissioners and all those involved:

I am very very opposed to and would like to clearly state my opposition to PacifiCorp-RMP's "Advice No. 16-13" filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I would urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

No rate increases that strangle solar energy in any way should be implemented!

This is a huge step backward in every way I would urge you instead to require all new construction to have at least 50% of available space be required to install solar panels. If they install solar panels, their property tax goes down; if they do not, their property tax is increased. That way the tax stays level and it costs the taxpayer nothing. We will breathe easier with cleaner air. If existing homes or businesses install solar panels, they get a lower property tax rate, in ten years, if you have not installed solar panels, you pay higher property tax. Really, it's all just common sense.

Just because RMP makes political contributions, they should not be allowed to unreasonably raise the costs for rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. Again, this is a huge step in the wrong direction. Instead, I would urge you to move the refineries, not the prison, and take this action on new construction to help clean our air.

Thank you, for accepting public input, though the deadline should be extended. I would respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request, and urgently require all new construction to install solar panels NOW.

If you have any questions, or if I can be of any further assistance, please do not hesitate to ask.

Dear Commissioners,

as a solar user I am very concern that the power company is trying to change the solar system . I have had my system for one year and I am upset that I will be charged in the future with higher costs

In good faith I had placed the system on my home with the idea I would repay my out lay of money in 8 years. I am concern that it will possble take twice to three times as long to pay for system.I feel that the power company has said one thing and then when people started to put systems in they have changed there outlook on solar and Iam concern.

please do not allow them to make changes to the system that is in place in turn causing me and other to have to pay more for our system.

If you need anyother info please feel free to call me or email me

Dear Commissioners:

I am opposed to PacificCorp-RMP's "Advice No 16-13:., filed November 9, 2016 that would change the rate structure for rooftop solar customer. I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I am a advocate of clean energy. I feel that solar customers are being punished for their actions in helping keep are environment more clean. I feel that this proposal punishes free enterprise and will create a hardship for the businesses that provide this service as well as their cus tomers. I feel that it would be appropriate to find a third party to evaluate a fair cost for the utilization of the power grid, for maintenance of the power equipment and for all costs that are relevant to a solar customers when their power leaves their homes. Please do not make such a important discussion without looking at who it helps and who it hurts.

Thank you for accepting this public input and I hope you will extend the deadline on this critical issue.

Opposition to Rocky Mountain Power, "Advice No. 16-13"

1 message

Zachary Allen <zachlallen@gmail.com>

Tue, Nov 22, 2016 at 5:08 PM

To: psc@utah.gov

Dear Commissioners,

I strongly oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I would urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am very concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Best,

Zach

Cherae Federico <rcfed5@gmail.com>

Tue, Nov 22, 2016 at 5:08 PM

To: psc@utah.gov

Dear Commissioners,

I am adamantly opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes. It seems unprofessional and unethical that Rocky Mountain Power has left the least amount of time for public comment or for anyone but RMP to be able to provide research or analysis for consideration. I also don't like that they have chosen the week of

the Thanksgiving holiday for the deadline for public comment to discourage participation. This deadline is unreasonable and should be extended.

I feel that Rocky Mountain Power should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. Not only do I have family members who have roof top solar, my close friend is the founder of Intermountain Wind and Solar and has employed my husband. He's grown this business for the last 8 years and it's shame to allow a monopoly to come in and bulldoze all of their hard work and aspirations. Rooftop solar adds value to the power system and grid. This rate increase would impose a 3-tiered rate system on solar customers only that would double or triple the payback period for a solar investment. This rate increase is the most **anti-solar** and **anti-business** rate proposal to date across the nation. If accepted, it very well could destroy the solar industry overnight therefore eliminating thousands of jobs and would resulting in us no longer having a livelihood. Destroying the solar industry seems like a disregard for the quality of our air and other environmental concerns. I feel that this is also a loss of a freedom to choose how I power my home. I'm astounded by this proposal and view it as a drastic overreach by a government regulated monopoly. Rocky Mountain Power's rate increases will effectively eliminate future investments in rooftop solar and significantly harm Utah's rapidly growing solar industry and eliminate consumer choice in energy production.

I would like to sincerely thank you for accepting public input. I do hope you will extend the deadline for public comment. I respectfully request the PSC, in the interests of ratepayers and the Utah public, reject PacifiCorp-RMP's current rate change request.

Thank you,

Cherae Federico

Solar power rate change

1 message

Carl Thummel <cthummel@genetics.utah.edu>

Tue, Nov 22, 2016 at 5:09 PM

To: "psc@utah.gov" <psc@utah.gov>

I am writing to voice my strong opposition to the proposed rate change for solar power customers of Rocky Mountain Power. I ask the PSC to deny Schedule 136 and its related Schedule 5 tariff.

We installed solar panels on our house over one year ago. Our motivation to do this was two-fold - to help the environment and to save money over the long run. We have seen both of these objectives met. More than 90% of our power is now covered by the solar panels, saving us significant money. At the same time, we are reducing the need to power our house through fossil fuels. In spite of these advantages, I am amazed that we are one of the only houses in our neighborhood that has solar panels. The sun beats down on our city most of the year, yet few people rely on solar power. It does not make sense! The main barrier is financial. It costs a lot of money to install the panels in the first place. Asking customers to then pay a fee for their solar power would be a mistake. This provides only more reasons to rely on fossil fuels. We need more support for solar power, not less. It is time for Rocky Mountain Power to step up and renovate their electrical grid to accommodate more solar electricity. Lets move forward, not backward. Salt Lake City should be all solar. Let's use the sun in our favor. Please don't provide further disincentives for doing the right thing to save our planet.

thank you,

Carl Thummel

Lisa Reinhart <lisa.reinhart@gmail.com>
To: psc@utah.gov
Cc: Chris Reinhart <mmmsquid@gmail.com>

Tue, Nov 22, 2016 at 5:12 PM

Dear Commissioners,

I am opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and allow the Commission time to complete their analysis to provide reasonable rates for net metering.

I am concerned by this proposal because I am a strong advocate for renewable energy development and this is a slap in the face to Utah's progressive achievement in the solar and wind industry. Just last year I purchased \$14,000 worth of solar panels to power my 2,700 sq. ft home. I thought it was unattainable and unaffordable for a middle income family like mine to do the right thing. I felt my children and this world deserved it and it was my duty as a human being. I am also concerned that even though I read through the Docket, I really don't understand what tariff is proposed nor do I understand how the net metering charge is established. I am an educated woman who has a career tied to Utah energy development, yet I can't figure out how net metering is established. For such an important topic, I would expect a little more public outreach and education.

When I was told I would pay RMP the ~\$10.00 a month for net metering, I asked... for what? What service am I receiving if I don't use RMP energy? The answer lies in those months in which I use more energy than my panels generate. Last year, that was 2 months out of 12. So, okay... I will pay the \$10/mo to have a backup. It was never explained to me from RMP where that money actually goes, and even though Google knows all... it doesn't know this. Even when I asked the RMP employee installing my box... he didn't have a logical answer other than the one I mentioned above.

I have personally been very aware of and involved in Utah coal mining and related policy. The fact is, Clean Coal does not exist in Utah. Clean Coal is a fluffy way of saying stricter emission standards for coal plants, which due to our unique geography and location of plants it is not financially reasonable in Utah. Under the next administration, the regulation to clean up power plants will lose all momentum. This proposal seems to be RMP's adjustment to a loss in revenue from coal power and conversion to solar power. Of course they want to promote coal power because they own the coal mines. It's completely logical that if they can prevent the people from going solar, they may be able to save their coal mines and keep coal alive. I understand it takes power and mining to make solar panels, but we must reduce our dependence on non-renewables. Coal mining is no longer a lucrative business, it does not make financial sense to support it politically. With thoughtful planning, solar production, installation, and maintenance could help mend the broken job force that once relied on coal mining.

I took a huge risk by purchasing those solar panels last year. In the end, I didn't put a dime down and I only pay \$150 a month on my 7 year loan. I also pay Rocky Mountain Power that \$10/mo. for the box on the side of my house to measure how much energy I use and how much I give back. When I use more energy than I produce, I pay for it, just like everyone else. When my non-solar neighbors have their air conditioning blasting during those hot summer days, my panels are soaking up the sun and putting that energy back into the grid... thus helping the RMP distribute power. But do they pay me for my investment or helping them regulate power availability? Of course not. So why should I have to pay more for that box to help them maintain a system I barely use? This, I urge you and RMP to convince me of. Not by allowing the price to go up, but by educating me... and with real effort. If RMP truly warrants additional funding from solar owners, please explain that to the people who want it most.

Please look out for the interests of the state's resources and it's citizens. RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. At a minimum, there should be an unbiased case made for any adjustments. Furthermore, a real effort to get those interested involved in the decision should be made. The filing was made on Nov. 9th and

comments are only taken until Nov. 22nd. If my solar company hadn't made me aware, I never would have known. What kind of advertising or public awareness was made. This is a big deal and that is less than a 2 week comment period, which is clearly not a reasonable effort to get public comments. Rooftop solar has so much value to the people in Utah, the power system and the grid. Please don't contribute to its demise.

Taken from your own website: "Governor Gary R. Herbert recognizes energy as one of the four cornerstones of Utah's strength, along with education, job creation, and self-determination. In recognition of this priority, the Governor's Office of Energy Development (OED) was created in 2011 **to advance Utah's diverse energy sector through planning, policy and direct engagement with the private sector; and thereby to foster economic growth through energy development and conservation activities and through the provision of affordable, reliable energy .**

Thank you for accepting my comments. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Jon Osmond

Cc: Intermountain Wind and Solar <info@imwindandsolar.com>

Dear Commissioner s,

• I strongly oppose PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes. The window of time is much too short to allow for responsible comments from the public and professionals involved with solar design.

- RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy that can be provided with solar energy.

- Today I printed out the draft of my design for a 7200 watt solar design – I will be submitting for building permits this next week. Now without any clear understanding of the impact of the rate increase for home owner's like myself – I will have to delay both the financing and justification to proceed with the project.

- **Please provide a detailed written justification on how increasing electrical power rates for net meeting services is justified.**

- With the goals published by Rocky Mountain Power and the State of Utah to encourage investment for renewable energy – How can RMP speak from both sides of the mouth?

- How can the state of Utah offer tax incentives that will encourage solar power investment <> and at the same time allow rate increase that target the same industry

Thank you for accepting public input, we expect the deadline will be extended.

I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Richard Marback <richard.marback@gmail.com>

Tue, Nov 22, 2016 at 5:18 PM

To: psc@utah.gov

In regard to rooftop solar , please suspend and reject the tariff f that is scheduled to begin December 9th 2016.

I am asking that you require Rocky Mountain Power to use the normal rate-making process for its proposed changes.

I was planning to add roof top solar to my home in 2017. This tariff f greatly impacts several key choices relating to that decision. Rooftop solar adds value to the power system and grid and solar should be encouraged, not discouraged.

Thank you for accepting public input on this, respectively , I feel that the deadline should be extended. I ur ge you to reject PacifiCorp-RMP's current rate change request on roof top solar .

In many states solar is having a positive impact on the community and the environment. Let's not halt these positive changes by adding charges that are simply punitive.

Respectfully,

Richard Marback

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

Sincerely,

Natalie Laird, jcnkdl@hotmail.com, Orem, UT

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy.

My seven-year-old son, Zachary, has terrible respiratory issues. As a parent, I look at the smog in our valley and worry for his future. I have lived in Utah for more than 20 years and I have considered relocating my family because of this issue. I don't believe rooftop solar will entirely solve our air quality issues, but I do believe it should be part of the solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Hello Utah Public Service Commission,

I am writing to signal my displeasure with the recently proposed rate hike by Rocky Mountain Power that would effectively and artificially remove the cost effectiveness of solar energy. As our country and world continue to careen down the path of ever increasing CO2 emissions, and wherever on the divide of man-made climate change you may be, a diversified panel of energy production options remains our surest way forward.

Please critically evaluate this proposed rate hike by Rocky Mountain Power. Decentralized and sustainable energy production options have great potential to improve both society and the environment. Please avoid letting the greed of RMP overwhelm this important chance to invest in our future with renewable energy options.

Thank you for your time.

To: psc@utah.gov

Dear Commissioners,

I am writing to comment on Rocky Mountain Power's Advice # 16-13. I am a strong advocate for developing renewable energy sources and believe it is in the public interest to promote and encourage adoption of solar energy production.

I believe that RMP's proposal would unfairly change the rate structure for rooftop solar customers, and this proposal has not gone through the normal rate-making review process. I'd like to see this proposal rejected and prevented from taking effect on Dec 9th as proposed, with a recommendation to go through the normal rate-making process and full cost/benefit study.

Thank you for being willing to listen to public comments on this topic.

Sincerely,
Rich Larson

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar, such as myself. My fiancé and I have made numerous offers on homes in Salt Lake County within the past few weeks and are looking in particular for our starter home that is solar-ready. If the proposed rate structure and tariff are adopted, it will become prohibitively expensive for us to install and operate solar equipment on our own home. Please do not remove the financial incentive associated with helping to save the environment through responsibly installing a clean energy generating system on our new home. Our winter inversions in Salt Lake County are bad enough without adding to it with the energy consumption in a home that is considerably less carbon-neutral than the one we are planning.

I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

Sincerely,

Sean Paul

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Further, I find it disturbing that just two years ago in 2014, Rocky Mountain Power claimed a cost-shift of \$4.65 (while still ignoring all the environmental and other benefits (avoided energy costs, reduced line loss, avoided capacity investment, grid resiliency, air quality, job creation in Utah) net metering provides, and now has come back with this proposal claiming a cost shift of nearly \$400 per year. This type of action erodes public trust, and makes me question Rocky Mountain Power's true intention.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

Dear Public Service Commission,

I support the continued subsidy/incentives for individuals putting solar on their houses. This industry is having a positive impact on Utah's economy with job growth and I believe it will only grow more. The incentive is also making this a reality for many Utah homeowners. It seems short sighted to disincentive this program as it helps with Utah having cleaner air, which I think is something we all value for our future generations. I am sure you have heard better arguments more articulate than mine, however please do NOT support Rocky Mountain and PacificCorp's proposal!!!

Paul Domgaard <c8551@aol.com>

Tue, Nov 22, 2016 at 5:26 PM

To: psc@utah.gov, hstephenson@le.utah.gov, dmccay@le.utah.gov

Dear Commissioners,

In 2013 my family installed enough solar panels (panels) on the roof of our home to bring our monthly electric bills down to the minimum charge for most of the year.

We signed in good faith a "Net Metering Agreement" (NMA) with Rocky Mountain Power (RMP) that we expected to last for 30 years or more.

RMP is a monopoly and there are good reasons to allow them to operate as such.

Continually changing our original Net Metering Agreement should not be one of them.

Our panels have not changed.

Our ability to recoup our monetary investment in the panels has not changed.

The quality of the Kilo Watts Hours (Kwh) of electrical energy delivered to the grid has not changed.

We do not offer our Kwh put back on the grid for sale to the general public.

We do get credit for Kwh put back on the grid for use only in our account with RMP as outlined in our NMA

Why do the fees associated with our NMA keep changing?

Sometimes we draw Kwh's from the RMP grid and we expect to pay the current rate for the service rendered.

Any other contract I enter into within our community the "Rule of Law" does not allow changes to the contract without mutual consent of the contracted parties.

We agree that the PSC serves an important role to check the RMP and how they operate the "Public Trust" they have been given.

When we started the minimum monthly charge was \$5.00 now its \$9.00.

Before we installed the panels we would experience brown outs and power outages on a regular basis during the summer months.

Since the panels installation using NMA we executed with RMP our home quality of power has been much better .

We took the initiative to purchase the panels for our home to improve the power quality in the home.

We provided a power generating point in the electric grid that is a benefit to us and our fellow electric power grid users.

I have heard a radio advertisement promoting RMP's Solar Farm Project.

RMP promotes 20 years of level monthly electric power payments to customer that sign up for the program.

Its renewable, Green and Sustainable.

When we put our original proforma together We figured of the 25 year warrantied life of the panels it would take 17 years of level rate operation to recover the cost of the panels installation.

We committed ourselves to eight years of free board after the capital costs where recovered would make a wise investment for the family

The last couple years the minimum monthly charge has increased 180 percent.

Some people occupy them selves complaining about how panels owners take advantage of the "system".

Its easy to complain about what your neighbor has done while you yourself have taken none of the monetary risk to improve the energy conditions of their homes.

We have paid our electrical energy dollars forward.
This is a benefit to the entire electrical grid.

We have seen the electric power quality at my home improve.
We do not burden the RMP grid much since we have provided a "point of electrical power generation."
Fees need to remain as outlined in the original NMA.
We have no way of raising income to cover additional fees.
As with any investment conditions need to be predictable in order for the projections to realize the desired result.
By spending our household energy dollars forward to purchase the panels, we expect to realize a small monetary savings over the long term life of our home.
This requires that the NMA does not continue to change.
There is no guarantee that we will be successful to realize a return on our investment.
We do not expect RMP and/or anyone else to back us up if our investment does not work out,
We do request that the conditions of the original NMA be upheld.
This action is more socially responsible than complaining about what the neighbor is or is not doing.

In March each year our Net Metering Agreement Zeros out.
In 2014 we had a balance of 900+ KWH swept from our account.
We understand it is part of the NMA.
Since this time we have purchased some Kwh from RMP during the dark months of the year.

I believe the Kwh from our panels put on to the grid does not go any further than the transformer box that services 3 homes in our neighborhood even on the best production days.
The impact of our panels are minimal on the electrical grid as a whole.
We do not waste huge amount of the Kwh produced shipping it long distances.

We request that the conditions of the original NMA be upheld.

I would like this letter to be entered as part of the public comments for the above referenced Docket.

Respectfully Submitted
Paul R. Domgaard
Riverton, Utah

To: psc@utah.gov

Dear Commission:

I am writing you to voice my opposition to Pacificorp-Rocky Mountain Power's advice Number 16-13. I recently moved to Utah from out of state so I could help build the solar industry in this great state. However, I believe that RMP's proposal would unfairly change the rate structure for rooftop solar customers. This is not fair

Would you please suspend the tariff and please prevent RMP's proposal from taking effect on December 9th? In my non-utility perspective, this seems to bypass their typical rate-making process. Would you please force them to use the normal process that has been set up to protect all rate payers, not just those who are seeking a renewable future for our world via solar. Following a normal rate-making process would ensure equality and fairness to all.

Utah has most recently been showcased as an ideal state for business to thrive. However, allowing RMP's proposal to advance will retard that general perspective by putting the needs of a large, semi-monopolistic organization over the small solar businesses that are a great employment driver in Utah. This not only subrogates the needs of small business to big business, but also ignores the long-term benefits that a renewable power source will have to Utah and to our planet. Please consider this in your deliberations.

Thank you very much for listening and for being willing to consider the needs of Utah's public--it will make a difference.

Kind regards,

Kent R. Williams

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Kash Montana, Kash.Tollis@vivintsolar.com Salt Lake City, UT

Please, please, please, do the right thing. Backwards legislation and greedy corporations have got us into the mess we are currently in. It's time we start looking towards a future of sustainable energy - a future of solar power. Please do not hike your rates for non-metering. We NEED solar power. It's time to work together to save the planet, and stop being motivated by greed alone. Now more than ever before.

Thank you,

Jocelyn Taylor

David <davidslcutah@gmail.com>

Tue, Nov 22, 2016 at 5:29 PM

To: psc@utah.gov

Dear Commissioners,

I am in opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov . 9, 2016, that would change the rate structure for rooftop solar customers. I encourage you to suspend the tariff of Rocky Mountain power should be forced to use the normal rate making process. I also feel that the deadline for comment is unusually short and has been timed by Rocky Mountain power to when people are focused on end of the year holidays. I have recently made, what is for me, a massive investment in clean energy and clean air for the state of Utah. My investment of over \$30,000 shows how much I care about the environment. Furthermore there are lots of solar jobs on the line and I'm afraid that if this new net metering agreement goes into effect that solar will die a quick death in Utah just as it did in Nevada. Also I fear that the grandfathering clause will eventually be eliminated also. That would be extremely unfair for all of the people who have signed a net metering agreement with Rocky Mountain power . Anyone who signed this agreement has done so knowing that they will be able to recoup their investment over the course of many years. I personally am suffering from the poor air quality in Utah. And so do many other people. I have heard the air-quality, on bad days, is worse than Beijing. I personally run Merv 16 air filters 24 hours a day in my house as it makes a big difference in my energy level. What will happen if air pollution gets worse and more people have to take the same measure? That will mean more energy use and worse air quality if rooftop solar is allowed to die in the state of Utah. That's a scary statistic and one of many reasons we need to promote clean air in the state of Utah and keep the status quo with net metering.

Thank you for taking the time to read my comments. Respectfully ,

David Chapman

Dear Commissioners,

I strongly oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov 9, 2016. Please suspend the tariff and prevent it from taking effect on December 9th. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. The proposed increase in rates will make rooftop solar uneconomical in Utah. Rocky Mountain Power should include all the benefits of solar when doing their analysis, not just a select few benefits.

I am deeply concerned about Utah's environment, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Bryan Christiansen

Dear Commissioners,

I wish to state my strong opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

The current issue is just another attempt for Rocky Mountain Power (hereafter RMP) to unfairly penalize those who take advantage of the Federal and State rebates which encourage clean solar power. Rocky Mountain Power wants to raise the rates of the "Net Meter" customer so that they can, in effect, be the recipient of those government incentives and the home owner won't be able to break even on their investment in solar or afford to install a solar system in the first place. Does this government believe in safe, clean, power when it is available or doesn't it? I hope that you will continue to support the people you have been put in a position to protect as you have done in the past

RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy.

I used to constantly receive information in the mail from Rocky Mountain Power talking about thermostat control and other ways to save power so that there would be enough for all customers. Now they complain that those with solar panels on the roof and who put power back into the grid are unfairly affecting those who don't have solar power. They are worried about their bottom line (which is natural) but they shouldn't be allowed to protect their bottom line at the expense of the customers that they have been given the opportunity to serve. What RMP has done with legislation and rules in Nevada has effectively killed solar power in that state. A state with so much potential for clean efficient power. I hope that will never be allowed to happen here in Utah.

Thank you for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Sincerely,

Keith R Buys

Dan Stone <dstone_44@yahoo.com>

Tue, Nov 22, 2016 at 5:39 PM

To: psc@utah.gov

Dear Commissioners,

I am strongly opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I strongly urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I strongly feel that this rate change is bad for the state of Utah. First of all the timing of this is extremely unfair and does not allow the public a fair and ample opportunity to voice our concerns and opinions. This deadline should be pushed back until sometime next year at the earliest. This is V ery shady and sneaky practices with the short deadline and timing around all the holidays.

Also, all of the data I have seen is coming directly from Rocky Mountain Power . What ever happened to a third party unbiased review of the data? It's also interesting to note that Rocky Mountain Power just built a solar farm and are trying to get people to sign up for that. Sounds like they just want to take over the market.

Rocky Mountain Power should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & ef ficient energy.

Utah has some of the worst air quality in the country and this proposal would be a contributor to making it worse. It is important that we do what we can to improve our air quality and solar is one way that we can do that.

Also I believe that rates should be even cheaper for those with solar. They contribute to the grid and many places even pay those who produce more than they use. How can they pay those customers yet here in Utah they want to charge them more? Sounds more like Rocky Mountain Power wants to double dip at our expense not only in our pocket books but our health and our children's health.

Next, this is bad for small businesses all across our state. One of the great things about Utah is how business friendly we are. We support small businesses and start-ups. W e should not allow a monopoly to destroy a large number of small businesses. This will negatively impact the lives of many people and many people will lose their jobs. How can you justify taking away someone's income and livelihood for a large corporation based solely on because they said so! This would devastate the solar industry, takes away consumer choice, and is a profound overreach by a government regulated monopoly.

Rocky Mountain makes so much in profits I find it hard to believe that this is about anything other than controlling the solar and utility market. I am not opposed to changes but they need to be fair and evaluated through a third unbiased party.

I am not aware of all of Utah's laws or all individual city laws, however I strongly feel that any city that has laws requiring businesses and households to be tied into the grid must be given the option to disconnect without any form of penalty . If you are going to force us to pay for a service we don't want we should be allowed to choose whether we want that service or not.

I am a Rocky Mountain Power customer that has never had any issues. I do not have solar panels but I do support small business and a healthy environment. I would like to have the option in the future to add panels without rate hikes if I ever decide to. It is very important that you reject this proposal!!

Please carefully read over all our input and data when making your decisions.

Thank you Commissioners for accepting public input even though the deadline should be extended. I request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change.

Thank you for your time,

To whom it may concern:

I wanted to express my **opposition** to the recent proposal from Rocky Mountain Power Advice No. 16-13 that would change rates for roof-top solar companies on December 9th.

The worse thing as a society that we can do is make short term decisions that could have a negative impact on an industry that in 20 to 30 years could be the norm for the vast majority of residential power generation. We need to think long term, not just short term and the precedent it will create.

Nevada is a mess due to a similar decision that effectively killed solar growth in a state where the sun should be a valued resource of energy. The solar industry is currently providing many jobs in the state and is growing steadily as it becomes more economically feasible for many customers. Without a doubt allowing Rocky Mountain Power to raise the costs for rooftop solar customers will dramatically hurt the growth of solar impacting Utah jobs and harming the environment.

This needs to be looked at as a long term decision. I would like to see more innovation from Rocky Mountain Power to adapt to changing energy sources. This tariff would again give all the 'power' to a monopolistic source to dictate the future of critical energy choices in our state.

Thank you for accepting my input to such an important issue. I appreciate your time and consideration.

Regards,

Jeff Hansen

To: PSC@utah.gov

Regarding Rocky Mountain Power proposing to hike the rates on net-metering for solar customers, making solar a bad investment. I think that we need to invest in solar to move to a clean energy economy in order to fight climate change and protect our winters. I'm an avid skier and I have noticed the effects of climate change on skiing, especially this year. The resorts in Utah have all had to push back there opening dates. Climate change will dramatically effect the snow in Utah. It might not be next year or in five years but if we do nothing to combat climate change, in who knows how long. The snow will be gone or minimized. Why is that a big deal? Because Utah thrives economically on snow, because we are a ski/snowboard driven state. "Utah, the greatest snow on earth." People come from around the world to ski here. The snow generate so many jobs and tons of money. By no mean is this going to solve climate change, but we need to do everything we can to protect our environment. I hope you can make the right choice. Thank you for your time.

Dear Commissioners,

I am 100% opposed to PacifiCorp-RMP "Advice-No. 16-13, filed Nov, 9, 2016 that would change the rate structure for rooftop solar customers. I would also urge the Public Service Commission to suspend the tariff and not let it take effect on December 9th as Rocky mountain has proposed and require Rocky Mountain Power to use the NORMAL rate-making process for it's proposed changes.

I feel that this move is a robbery of the free market for Utahans regarding their choice of power for their home. This is a massively unreasonable increase in charges for solar customers and would greatly restrict if not kill free trade in Utah for power and would limit access to clean and efficient energy. I am in a phase of life where my family and I are looking for a home to purchase, on which I have planned to install solar and many of my friends are looking forward to doing the same. If this increase is passed, then my right to choose how I want to power my home will essentially be robbed as it will kill solar growth in Utah. I am the type of person that wants to be as independent as possible and owning my own solar system would enable me to take steps toward my own self sufficiency. Passing this rate change would essentially rob me of that choice. Please don't take away my ability to own clean, economical, and environmentally friendly power by approving this robbery of a rate change.

I thank the Commissioners in advance for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interest of the ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

To whom it may regard,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Jesse Olsen

1 message

Benjamin Smith <benpsmith@gmail.com>

Tue, Nov 22, 2016 at 5:47 PM

To: psc@utah.gov

Dear Concerned State Government,

Learning of PacifiCorp-Rocky mountain Power's Advice No. 16-13 has left me opposed to the Advice and very concerned of our state's future and the influence it has on the rest of the nation.

I understand that this proposal raises the rates of solar energy residences. This is **unreasonable** in that citizens shouldn't pay more to a fossil fuel company for using clean energy, **unsubstantiated** in that Rocky Mountain's reasoning for increasing rates is anti-competitive and monopolistic, and **unfathomable** to participate in when the effects of such a proposal on the solar industry are vividly illustrated next door in Nevada; there is next to no solar interest in Nevada.

Having said that, I would ask that you suspend the tariff to prevent Rocky Mountain Power's proposal from taking effect on December 9th. They need to stick to their normal rates. We, as a people, as a state concerned with air quality, must not let regulations suppress the use of clean-energy alternatives.

Please consider what has happened in Nevada. Consider the perception you give to your state's residents and the nation when you pass laws that hinder air quality and a free market. It is simply un-American. We cannot support an industry that is mature and declining when the alternative sources are becoming. Especially in a state that has a myriad of solar companies, it is better for the economy, jobs, and the environment.

Sincerely,

Ben Smith, benpsmith@gmail.com, Lehi, UT

To: psc@utah.gov

Dear Public Service Commission:

First, I want to just let you know , I realize you are in a difficult position. Thank you for taking the time to read my email. It's important to me, as someone who believes in green energy options.

I want to be clear, I feel it's unfair to allow Rocky Mountain Power to abuse their power by forcing unfair fees for installing rooftop solar.

I officially oppose PacifiCorp-Rocky Mountain Power's Advice No. 16-13.

Please suspend the tariff and prevent Rocky Mountain's Power's proposal from taking place December 9th.

Please have them use the normal price. It makes no sense.

I believe you should not be allowed to unreasonably raise the cost of rooftop solar. You are punishing people for wanting to go green. These people want to save the environment. For me, I personally have asthma, and ANY effort to promote green energy, use less fossil fuels helps me breathe better . It's a medical issue for me. By trying to charge unfair dollar amounts, you are increasing fossil fuel usage, and you increase pollution.

I have signed affidavits regarding previous criminal cases regarding illegal pollution, and I feel like this would be on the similar line as illegally polluting, if you don't allow solar on roofs.

Thanks again for taking the time to read this.

Brandon Federico <brandonfederico@icloud.com>

Tue, Nov 22, 2016 at 5:51 PM

To: psc@utah.gov

Dear Commissioners,

I am adamantly opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes. It seems unprofessional and unethical that Rocky Mountain Power has left the least amount of time for public comment or for anyone but RMP to be able to provide research or analysis for consideration. I also don't like that they have chosen the week of the Thanksgiving holiday for the deadline for public comment to discourage participation. This deadline is unreasonable and should be extended.

I feel that Rocky Mountain Power should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. Not only do I have family members who have roof top solar, my close friend is the founder of Intermountain Wind and Solar. He's grown this business for the last 8 years and it's shame to allow a monopoly to come in and bulldoze all of their hard work and aspirations. Rooftop solar adds value to the power system and grid. This rate increase would impose a 3-tiered rate system on solar customers only that would double or triple the payback period for a solar investment. This rate increase is the most **anti-solar** and **anti-business** rate proposal to date across the nation. If accepted, it very well could destroy the solar industry overnight therefore eliminating thousands of jobs and would resulting in us no longer having a livelihood. Destroying the solar industry seems like a disregard for the quality of our air and other environmental concerns. I feel that this is also a loss of a freedom to choose how I power my home. I'm astounded by this proposal and view it as a drastic overreach by a government regulated monopoly

Rocky Mountain Power's rate increases will effectively eliminate future investments in rooftop solar and significantly harm Utah's rapidly growing solar industry and eliminate consumer choice in energy production.

I would like to sincerely thank you for accepting public input. I do hope you will extend the deadline for public comment. I respectfully request the PSC, in the interests of ratepayers and the Utah public, reject PacifiCorp-RMP's current rate change request.

Thank you,

Brandon Federico

agfanfam@netzero.net <agfanfam@netzero.net>

Tue, Nov 22, 2016 at 5:50 PM

To: psc@utah.gov

Dear Commissioners,

I am writing to voice my opposition to PacifiCorp-RMPs "Advice No. 16-13" filed 9 Nov 2016, which would allow Rocky Mountain Power to change the rate structure for rooftop solar customers. Rocky Mountain Power should have to follow the normal rate making process, rather than try to circumvent the process by using a holiday weekend for public input. I urge you to suspend this action until the normal process can be applied.

As a recent solar customer, I am outraged by Rocky Mountain Power's attempt to discourage the use of natural, renewable, clean energy in an attempt to solely protect their bottom line. Solar power is beneficial to the environment and the community, and I have several friends and neighbors who are interested in solar power as well. Allowing this proposal to be approved will cripple, if not totally destroy, the solar power industry. Additionally, this proposal will now punish people like me who have decided to invest in solar power by unfairly doubling or tripling the time needed to pay off our investment. Imagine the outrage if the housing community suddenly decided to double or triple the interest rate on mortgage loans just so that industry could protect their investment. The government would not allow such a thing to happen.

Rather than trying to find ways to discourage solar power initiatives, Rocky Mountain Power should be encouraged and incentivized to invest in solar power and pass those incentives on to the consumers. Imagine the benefits if more people were encouraged to lease their roof space to install solar panels and generate clean, renewable energy. The costs for Rocky Mountain Power to generate power using inefficient hydroelectric dams, wind mills, and fossil fuel generators would be significantly reduced and would also improve the environment. It would be a true win-win for both the corporation and the customer.

Thank you for your time and consideration for public input into this issue. I respectfully request that, at a minimum, the deadline for considering this very important issue be extended so that proper studies can be conducted.

Respectfully,

To: "psc@utah.gov" <psc@utah.gov>

- Address your comment email to: psc@utah.gov
- **Subject line:** Docket #16-035-T14 Public Comment
- **Greeting:** Dear Commissioners,
- **Paragraph #1:** State your opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.
- **Paragraph #2 (optional):** Summarize the key reasons why you feel RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. Consider expressing how such changes would personally impact you. Also, feel free to include that you have read articles and studies from other regions where they have found rooftop solar to have value to the power system and grid.
- **Last paragraph:** Thank the Commissioners for accepting public input, though the deadline should be extended. Respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Dear Commissioners:

I am a rooftop solar owner. We will die before we recoup the cost of our solar panels even with the incentives and rates currently available. We bought solar panels because we want our neighbors, children and grandchildren to breathe clean air.

I am opposed to PacifiCorp RMP Advice no. 16-13 filed Nov 9 2016. I urge you to use the normal rate making process for your proposed changes.

I am so discouraged that I even have to write this email urging you to do this.. Utah Power and Light is putting profit before the health of Utah citizens. Solar panels produce clean efficient energy. Do not agree to a rate change that discourages rooftop solar. Be wise. Be brave. I thank you for reading my comments.

Sincerely,

Marion Johnson 343 E Edith Ave. SLC Utah 84111

Loralee Kurzius <ljkurzius@gmail.com>

Tue, Nov 22, 2016 at 5:54 PM

To: psc@utah.gov

Commissioners,

I highly oppose PacifiCorp-RMP's "Advice No. 16-13", filed Nov . 9, 2016, that would change the rate structure for rooftop solar customers!

Please, we beg you, the Public Service Commission, to suspend this absurd tariff and the December 9th deadline that Rocky Mountain Power has proposed. Any changes should be required to go through the normal rate-making process.

We have seen first hand, how the power company in Nevada has devastated the solar industry there. Family members and friends have been left footing a huge bill for panels that don't pay off. It is simply criminal to do this in a state where the sun is so abundant and air conditioning bills are easily \$600 a month. Utah is more progressive than that! We can and should openly embrace the chance to utilize the abundant resource that the sun is in our state.

After much study and research, we invested in solar panels. Our family is trying to live green, and shrink the footprint we leave behind for following generations. We power our home and two cars purely from the sun and still feed excess electricity back into the grid that Rocky Mountain can then sell to others for a profit. We should not be punished for making the effort to be environmentally conscious. We need to be encouraging all to take advantage of the clean and efficient energy that falls from the sky like manna from heaven. I understand that Rocky Mountain Power is running scared as more and more households recognize the many benefits and turn

to solar, but they, like every other industry, must embrace the future rather than fight it and make positive changes.

Thank you for accepting public in-put, but please, extend the deadline. Again, we beg you, for the sake of our great state, to reject Pacific-Corp-RMP's current rate change request in all its absurdity.

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

Sincerely,

Angel Rogers

Please do not allow Rocky Mountain Power's proposed rate hike on solar to go through. We are starting to gain some momentum against climate change. We need to foster this and do what's right for our planet and economy. Keep the solar companies in business. We don't want to lose these jobs like Nevada did.

In addition, the families that already did solar should not have the rug pulled out from under them.

Thank you,

Bryan Godlewski

To: psc@utah.gov

Dear Commissioners,

I am 100% opposed to PacifiCorp-RMP "Advice-No. 16-13, filed Nov, 9, 2016 that would change the rate structure for rooftop solar customers. I would also urge the Public Service Commission to suspend the tariff and not let it take effect on December 9th as Rocky mountain has proposed and require Rocky Mountain Power to use the NORMAL rate-making process for it's proposed changes.

I feel that this move is a robbery of the free market for Utahans regarding their choice of power for their home. This is a massively unreasonable increase in charges for solar customers and would greatly restrict if not kill free trade in Utah for power and would limit access to clean and efficient energy. I am in a phase of life where my family and I are looking for a home to purchase, on which I have planned to install solar and many of my friends are looking forward to doing the same. If this increase is passed, then my right to choose how I want to power my home will essentially be robbed as it will kill solar growth in Utah. I am the type of person that wants to be as independent as possible and owning my own solar system would enable me to take steps toward my own self sufficiency. Passing this rate change would essentially rob me of that choice. Please don't take away my ability to own clean, economical, and environmentally friendly power by approving this robbery of a rate change.

I thank the Commissioners in advance for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interest of the ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

1 message

Benjamin Smith <benpsmith@gmail.com>

Tue, Nov 22, 2016 at 5:47 PM

To: psc@utah.gov

Dear Concerned State Government,

Learning of PacifiCorp-Rocky mountain Power's Advice No. 16-13 has left me opposed to the Advice and very concerned of our state's future and the influence it has on the rest of the nation.

I understand that this proposal raises the rates of solar energy residences. This is **unreasonable** in that citizens shouldn't pay more to a fossil fuel company for using clean energy, **unsubstantiated** in that Rocky Mountain's reasoning for increasing rates is anti-competitive and monopolistic, and **unfathomable** to participate in when the effects of such a proposal on the solar industry are vividly illustrated next door in Nevada; there is next to no solar interest in Nevada.

Having said that, I would ask that you suspend the tariff to prevent Rocky Mountain Power's proposal from taking effect on December 9th. They need to stick to their normal rates. We, as a people, as a state concerned with air quality, must not let regulations suppress the use of clean-energy alternatives.

Please consider what has happened in Nevada. Consider the perception you give to your state's residents and the nation when you pass laws that hinder air quality and a free market. It is simply un-American. We cannot support an industry that is mature and declining when the alternative sources are becoming. Especially in a state that has a myriad of solar companies, it is better for the economy, jobs, and the environment.

Sincerely,

Ben Smith, benpsmith@gmail.com, Lehi, UT

Dear Public Service Commission:

First, I want to just let you know , I realize you are in a difficult position. Thank you for taking the time to read my email. It's important to me, as someone who believes in green energy options.

I want to be clear, I feel it's unfair to allow Rocky Mountain Power to abuse their power by forcing unfair fees for installing rooftop solar.

I officially oppose PacifiCorp-Rocky Mountain Power's Advice No. 16-13.

Please suspend the tariff and prevent Rocky Mountain's Power's proposal from taking place December 9th.

Please have them use the normal price. It makes no sense.

I believe you should not be allowed to unreasonably raise the cost of rooftop solar. You are punishing people for wanting to go green. These people want to save the environment. For me, I personally have asthma, and ANY effort to promote green energy, use less fossil fuels helps me breathe better . It's a medical issue for me. By trying to charge unfair dollar amounts, you are increasing fossil fuel usage, and you increase pollution.

I have signed affidavits regarding previous criminal cases regarding illegal pollution, and I feel like this would be on the similar line as illegally polluting, if you don't allow solar on roofs.

Thanks again for taking the time to read this.

Brandon Federico <brandonjfederico@icloud.com>

Tue, Nov 22, 2016 at 5:51 PM

To: psc@utah.gov

Dear Commissioners,

I am adamantly opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes. It seems unprofessional and unethical that Rocky Mountain Power has left the least amount of time for public comment or for anyone but RMP to be able to provide research or analysis for consideration. I also don't like that they have chosen the week of the Thanksgiving holiday for the deadline for public comment to discourage participation. This deadline is unreasonable and should be extended.

I feel that Rocky Mountain Power should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. Not only do I have family members who have roof top solar, my close friend is the founder of Intermountain Wind and Solar. He's grown this business for the last 8 years and it's shame to allow a monopoly to come in and bulldoze all of their hard work and aspirations. Rooftop solar adds value to the power system and grid. This rate increase would impose a 3-tiered rate system on solar customers only that would double or triple the payback period for a solar investment. This rate increase is the most **anti-solar** and **anti-business** rate proposal to date across the nation. If accepted, it very well could destroy the solar industry overnight therefore eliminating thousands of jobs and would resulting in us no longer having a livelihood. Destroying the solar industry seems like a disregard for the quality of our air and other environmental concerns. I feel that this is also a loss of a freedom to choose how I power my home. I'm astounded by this proposal and view it as a drastic overreach by a government regulated monopoly

Rocky Mountain Power's rate increases will effectively eliminate future investments in rooftop solar and significantly harm Utah's rapidly growing solar industry and eliminate consumer choice in energy production.

I would like to sincerely thank you for accepting public input. I do hope you will extend the deadline for public comment. I respectfully request the PSC, in the interests of ratepayers and the Utah public, reject PacifiCorp-RMP's current rate change request.

Thank you,

Brandon Federico

agfanfam@netzero.net <agfanfam@netzero.net>

Tue, Nov 22, 2016 at 5:50 PM

To: psc@utah.gov

Dear Commissioners,

I am writing to voice my opposition to PacifiCorp-RMPs "Advice No. 16-13" filed 9 Nov 2016, which would allow Rocky Mountain Power to change the rate structure for rooftop solar customers. Rocky Mountain Power should have to follow the normal rate making process, rather than try to circumvent the process by using a holiday weekend for public input. I urge you to suspend this action until the normal process can be applied.

As a recent solar customer, I am outraged by Rocky Mountain Power's attempt to discourage the use of natural, renewable, clean energy in an attempt to solely protect their bottom line. Solar power is beneficial to the environment and the community, and I have several friends and neighbors who are interested in solar power as well. Allowing this proposal to be approved will cripple, if not totally destroy, the solar power industry. Additionally, this proposal will now punish people like me who have decided to invest in solar power by unfairly doubling or tripling the time needed to pay off our investment. Imagine the outrage if the housing community suddenly decided to double or triple the interest rate on mortgage loans just so that industry could protect their investment. The government would not allow such a thing to happen.

Rather than trying to find ways to discourage solar power initiatives, Rocky Mountain Power should be encouraged and incentivized to invest in solar power and pass those incentives on to the consumers. Imagine the benefits if more people were encouraged to lease their roof space to install solar panels and generate clean, renewable energy. The costs for Rocky Mountain Power to generate power using inefficient hydroelectric dams, wind mills, and fossil fuel generators would be significantly reduced and would also improve the environment. It would be a true win-win for both the corporation and the customer.

Thank you for your time and consideration for public input into this issue. I respectfully request that, at a minimum, the deadline for considering this very important issue be extended so that proper studies can be conducted.

Respectfully,

I feel that Rocky Mountain Power should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. This change will personally impact me because not only do I have solar on my roof, but my husband is the founder of Intermountain Wind & Solar. He's grown this business for the last 8 years and it's a shame to allow a monopoly to come in and bulldoze all of our hard work and aspirations. Rooftop solar adds value to the power system and grid. This rate increase would impose a tiered rate system on solar customers only that would double or triple the payback period for a solar investment. This rate increase is the most **anti-solar** and **anti-business** rate proposal to date across the nation. If accepted, it very well could destroy the solar industry overnight. This would result in us no longer having a livelihood. Destroying the solar industry seems like a disregard for the quality of our air and other environmental concerns. That this is also a loss of a freedom to choose how I power my home. I'm astounded by this proposal and view it as a drastic overreach by a government regulated monopoly.

Rocky Mountain Power's rate increases will effectively eliminate future investments in rooftop solar and significantly harm Utah's rapidly growing solar industry and eliminate consumer choice in generation.

I would like to sincerely thank you for accepting public input. I do hope you will extend the deadline for public comment. I respectfully request the PSC, in the interests of ratepayers and the Utah public, reject PacifiCorp-RMP's current rate change request.

Thank you,

Mike Telford

I want to log my personal opposition to to PacificCorp-Rocky Mountain Power's Advice No. 16-13.

I have Solar on my house and want Solar adoption to grow.

I would like the Commission to Suspend the tariff from taking effect on December 9th.

Rocky Mountain should follow the normal rate-making process.

Thank you for reading this.

- Address your comment email to: psc@utah.gov
- **Subject line:** Docket #16-035-T14 Public Comment
- **Greeting:** Dear Commissioners,
- **Paragraph #1:** State your opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.
- **Paragraph #2 (optional):** Summarize the key reasons why you feel RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. Consider expressing how such changes would personally impact you. Also, feel free to include that you have read articles and studies from other regions where they have found rooftop solar to have value to the power system and grid.
- **Last paragraph:** Thank the Commissioners for accepting public input, though the deadline should be extended. Respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Dear Commissioners:

I am a rooftop solar owner. We will die before we recoup the cost of our solar panels even with the incentives and rates currently available. We bought solar panels because we want our neighbors, children and grandchildren to breathe clean air.

I am opposed to PacifiCorp RMP Advice no. 16-13 filed Nov 9 2016. I urge you to use the normal rate making process for your proposed changes.

I am so discouraged that I even have to write this email urging you to do this.. Utah Power and Light is putting profit before the health of Utah citizens. Solar panels produce clean efficient energy. Do not agree to a rate change that discourages rooftop solar. Be wise. Be brave. I thank you for reading my comments.

Sincerely,

Marion Johnson 343 E Edith Ave. SLC Utah 84111

To: psc@utah.gov

Dear Commissioners,

I write to voice my opposition to the recent proposal from Rocky Mountain Power "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

Sincerely,

Brandon Hale, brandonhale6@gmail.com, American Fork, UT

Commissioners,

I highly oppose PacifiCorp-RMP's "Advice No. 16-13", filed Nov . 9, 2016, that would change the rate structure for rooftop solar customers!

Please, we beg you, the Public Service Commission, to suspend this absurd tariff and the December 9th deadline that Rocky Mountain Power has proposed. Any changes should be required to go through the normal rate-making process.

We have seen first hand, how the power company in Nevada has devastated the solar industry there. Family members and friends have been left footing a huge bill for panels that don't pay off. It is simply criminal to do this in a state where the sun is so abundant and air conditioning bills are easily \$600 a month. Utah is more progressive than that! We can and should openly embrace the chance to utilize the abundant resource that the sun is in our state.

After much study and research, we invested in solar panels. Our family is trying to live green, and shrink the footprint we leave behind for following generations. We power our home and two cars purely from the sun and still feed excess electricity back into the grid that Rocky Mountain can then sell to others for a profit. We should not be punished for making the effort to be environmentally conscious. We need to be encouraging all to take advantage of the clean and efficient energy that falls from the sky like manna from heaven. I understand that Rocky Mountain Power is running scared as more and more households recognize the many benefits and turn

to solar, but they, like every other industry, must embrace the future rather than fight it and make positive changes.

Thank you for accepting public in-put, but please, extend the deadline. Again, we beg you, for the sake of our great state, to reject Pacific-Corp-RMP's current rate change request in all its absurdity.

Dan Schilaty <imdanite@gmail.com>

Tue, Nov 22, 2016 at 5:54 PM

To: psc@utah.gov

Dear Cpmmissioners,

We are strongly opposed to PacificCorp-RMP's Advice No. 16-13, filed November 9, 2016 that would change the rate structure for rooftop solar customers. We urge the PSC to suspend the tariff and not let it take effect December 9th as RMP has proposed and require it to use the normal rate-making process for any proposed changes. This is the most regressive proposal I have heard of in years, and by a government regulated monopoly less.

Solar users are simply trying to do their part to protect the environment. Our valley has poor air quality as it is, and allowing RMP to proceed does not help this situation. Individuals should have the freedom to choose how to power their homes, and this freedom should not be taken away by an overreach by a government regulated monopoly. This seems so inconsistent with what our federal government is trying to do in protecting our environment. From my reading, there are many advantages to the grid added by the solar users that need to be given serious consideration.

I am also very concerned with the impact this will have on the solar industry in Utah.

- There are numerous solar companies operating in Utah that would be negatively impacted
- Many jobs would be lost
- One of the basic opportunities that the average citizen has to positively impact the environment would be taken away.

RMP's filing should not be allowed without the benefit of a full cost-benefit rate study for solar power is completed in an open, transparent manner. To "rush" this proposal through the process with a full disclosure should not be allowed.

We believe in renewable energy and should be cultivating and encouraging the use of more solar power and should not allow RMP's proposal that discourages its use.

I am also wary of the supposed "grand fathering" arrangement proposed.

We express our thanks to the Commissioners for accepting public input, and request that the deadline for public comment be extended. We respectfully request that the PSC, in the interest of ratepayers, the Utah public and future generations, reject RMP's current rate change request.

Thank you,

Daniel J. and Jonni Sue Schilaty

Dear Utah Public Service Commission,

My name is Michelle Stone and I am a Sales Director for Evelar Solar here in Utah. We are a rapidly growing company.

I work on hiring new people every week. Some are part time and many are full time. Many families depend on our company and the solar industry to provide income for them. Rocky Mountain Power's proposed rate hike would seriously impact the income for me and my employees. In addition, many Utah families will choose to not go solar which has a negative impact on our environment. We are asking for this rate hike to not be approved. Please consider the cost of this rate hike to the thousands of solar industry workers across this state and the environmental cost when making this decision.

Sincerely,

Michelle Stone

Rocky Mountain Power's PacifiCorp-RMP's "Advice No. 16-13",1 message

David Howell <david.howell@uvm.edu>

Tue, Nov 22, 2016 at 5:56 PM

To: psc@utah.gov

I am strongly opposed to the proposal by Rocky Mountain Power's proposal to change the rate structure for solar power.

For some time I contributed a separate payment for RMP to support the use of solar. They were buying solar at extra cost, and I was helping to pay for it. I did that because I think that solar power is very important for our future. This summer we installed power on our roof, presumably at the encouragement of RMP and their literature. Now they want to kill the solar industry through a very significant rate hike to people like us who have worked to advance the use of solar power. That is blatantly unfair. They say that they would grandfather existing solar users, but that they reserve the right to change that agreement. That is unfair to existing users, and it will kill the future of solar for new installers. That is clearly a very disturbing state of affairs.

In Nevada a similar change was introduced. It had a huge effect on the installation of new systems, and put thousands of people out of work, along with major solar companies. This is certainly not what we want for Utah.

I urge you to reject this proposal in its entirety. It will take the country backward in its energy production and harm those people who have done what the country has been encouraging them to do. And all of this for the profits of RMP and PacificCorp.

Please don't go along with this very bad proposal. (And have you noticed that they submitted this the day after election day, hoping few people would notice. Is that the way they should be doing business?)

Manfred Kurzius <makurzius@gmail.com>

Tue, Nov 22, 2016 at 5:59 PM

To: psc@utah.gov

Dear Commissioners,

I oppose PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

What RMP wants to do is unacceptable, un-American, and bad for Utah in general. If approved, RMP's rate increases will effectively eliminate future investments in rooftop solar and significantly harm Utah's rapidly growing solar industry and eliminate consumer choice in energy production. It will restrict free trade, limit access to clean and efficient energy, and undo any forward momentum we already had at cleaning up our air/planet. Surely my excess power I generate and provide to my neighbors is of value to the power system and company.

Thank you for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Steven Lloyd <dwarfmoss@gmail.com>

Tue, Nov 22, 2016 at 5:59 PM

To: psc@utah.gov

To whom it may concern:

I am opposed to PacifiCorp-Rocky Mountain Power's Advice No. 16-13. RMP's proposed rate structure would be an unfair for those owning solar.

Solar and solar technology is important to humanity's future for sustained power (and preserving our planet). This rate change, that is specifically aimed at solar owners, will turn many away from getting solar which will, in turn, retard developments and progress in solar technology which will only improve what RMP can offer it's customers.

I believe that RMP should be doing what it can to encourage the development of solar and solar technology, as moving in that direction could seriously help the stability of the power grid and help defray the costs of power to the consumer and to the utilities. They should even go as far as offering solar as an option themselves. Good will come from developing and researching technology.

Please suspend the tariff and prevent Rocky Mountain Power's proposal from taking effect on December 9th.

Thank you for being willing to listen to the public on this matter .

Sincerely,
Steven Lloyd

To: psc@utah.gov

I am opposed to Rocky Mountain Power's (RMP) advice No. 16-13. This proposal would unfairly change the rate structure for rooftop solar. Please suspend this tariff and stop RMP's proposal from taking effect on 9 Dec 2016.

RMP should use the normal rate-making process. What RMP does not take into consideration is the greater environmental impact solar can have on air pollution here in Utah especially when the inversion is severe. Their only consideration is their pocketbook and maintaining a monopoly. Similar and less severe anti-competitive measures were taken in Nevada and it effectively shut down roof top solar.

The members of this commission need to consider all the factors, not just monetary interests.

Additionally, although not on the official public record, the 15,000 people who petitioned against RMP ought to be taken into consideration. Not doing so would be an irresponsible oversight.

If this is not given fair consideration, any elected official involved will not get my vote in the future. I do not approve of back door deals forced through without sufficient time for public response. To me, this whole situation reeks of nepotism. I truly hope this is not the case.

Thank you for taking my public comment into consideration.

1 message

Andrew Edtl <andrew.edtl@gmail.com>

Tue, Nov 22, 2016 at 6:06 PM

To: psc@utah.gov

Dear Commissioners,

I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff, not let it take effect December 9th as Rocky Mountain Power (RMP) has proposed, and require Rocky Mountain Power to use the normal rate-making process for its proposed changes.

As a Veteran, I've had the opportunity to defend freedom for this great country of ours. However, the proposal from RMP goes is a direct assault against free trade, and people's access to clean and efficient energy. There are many reasons people choose solar energy: to reduce pollution, help save the environment, to make an investment, or to continue their journey of disaster preparedness. Each of the reasons has one thing in common though, it's the individual's choice, and that's what is at stake here, our ability to choose. By unreasonably raising rates, RMP is waging an attack against competition, and the free market system. For years, RMP has enjoyed a monopoly on our choice of power. As technology has improved, they've seen a threat to their complete control over a utility that is essential to our way of life. RMP's rate increases will not only be a significant impact to choice and new solar installations, but will stunt industry growth for years to come. Studies in other regions where similar measures have been enacted were devastating to the solar industry, and to individual choice.

Thank you so much for accepting public input, and for all that you do. I would ask that you extend the deadline for public comment, as so many of our great citizens here are preparing for dinner, pie, and thanksgiving, as we give thanks to the many freedoms we have, as well as our free market system.

I would respectfully request, in the interests of ratepayers and the Utah public, that you reject PacifiCorp-RMP's current rate change request.

Sincerely,

Andrew Edtl

Dear Commissioners,

As a commercial solar customer that has made a significant capital investment of installing a large solar array on my warehouse I am in strong opposition to PacifiCorp - Rocky Mountain Power's Advice No. 16-13. I urge you to suspend the tariff and prevent it from taking effect. Furthermore, I urge you to require RMP to use the normal rate-making process for the proposed changes.

While I understand the underlying reason RMP is requesting these changes, the way they are proposing the changes, the timing for public comment and the obvious intention to subvert due process is underhanded and shouldn't be tolerated by the commission. The proposed changes severely restrict free-trade and will limit access to clean and renewable energy. I made my decision to install solar based on a scheduled period of payback on my investment and this proposed rate change will more than double the time I estimate the system will pay for itself in savings.

While I understand that solar customers such as myself are not paying a rate that is in-line with the costs of maintaining the grid they are tied into, there are much better and more efficient ways of finding that equilibrium. Also, I have researched and read a number of articles and arguments that demonstrate the value of having the grid being supported by small scale solar systems that can offset higher demand during peak periods. RMP is presenting only one side of the argument and isn't taking into consideration the value of solar customers and their effect on reducing demand during peak periods (hot summer days). I feel solar customers like myself are creating more value than RMP will acknowledge and this is simply an underhanded attempt to increase profits. The proposed changes aren't as centered on overhead and maintenance as they are trying to fool the commission into believing.

I am grateful for your willingness to accept public comment although I feel the time allotted for comment is too short and during a very inconvenient time for rate payers. I respectfully ask that the commission will consider the interest of rate payers and the Utah public and reject the proposed changes.

I am open for further discussion and can be contacted at:

To: psc@utah.gov

Dear Commissioners,

I am opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I would urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I feel RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. I plan on building a new home this next year and with the change in rate structure this would make the cost of solar panels prohibitive. I believe many others feel the same way as I do.

Therefore our environment will continue to become more polluted without using solar power. I also believe it would have a significant negative impact on Utah jobs and tax dollars from that income. In other regions they have found rooftop solar to have value to the power system and grid.as well.

Thank you for accepting public input, though the deadline should be extended as not many people are aware of the potential changes yet.

I Respectfully request in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Regards,

Kevin Larsen

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

John Knudsen

Scott C <scott.corpe@gmail.com>

Tue, Nov 22, 2016 at 6:10 PM

To: psc@utah.gov

Dear Commissioners,

-
- I am opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov . 9, 2016, that would change the rate structure for rooftop solar customers. The timing of this proposal, and extremely short notice is more than unreasonable in that it allows insufficient time for ordinary public comment, and the fact that this response time is further reduced due to the Thanksgiving Holiday . I urge you to suspend this tariff, and not allow it to take effect on December 9th as Rocky Mountain Power (RMP) has proposed. Rather , they should be expected, and required, to use the normal rate-making process for this, and any other , proposed changes.

The primary reasons I chose to have a rooftop solar system installed was to reduce my monthly utility bill, reduce demand on RMP's grid, and to posture myself for a better retirement which will coincide with paying off this system. The side benefits are also that I feel I am doing more towards trying to alleviate the effects of our air pollution problem in this area by producing carbon-free energy to my home, as well as taking some measure of my own choosing in promoting free trade by having the system installed by an independent company. Finally, this system was proposed to, and I fully expected that it would, increase the value of my home. Now , if RMP is allowed to enact their proposed tariff, these benefits may be in jeopardy , and in fact, I am concerned that this system could actually be a detractor on my property's value if this development is allowed to take place.

One final thought on my contribution to RMP's power grid, is that during heavy demand, such as in the summer, when demand is at it's highest, my system is not placing additional load on the grid, but rather reducing it. It would seem reasonable to assume that this would aid RMP in meeting the demands of their customers, not detract from it. There are several articles that provide information showing that solar is actually good for the grid, environment, and economy . One such article can be found at:

https://www.washingtonpost.com/national/health-science/ utilities-sensing-threat-put-squeeze-on-booming-solar-roof-industry/2015/03/07/2d916f88c1c9-11e4-ad5c-3b8ce89f1b89_story.html

I would like to thank you for the time to read my comments, and accepting public input to this topic. I do feel strongly, however , that the time to accept our input should be extended, as I stated previously , the timing and short deadline certainly make this proposal look suspicious, and RMP should not be allowed to benefit from this tactic. Therefore, I respectfully request that you, the Public Service Commission, reject PacifiCorp-RMP's current change request.

Thank You,

Scott Corpe

Dear Utah Public Service Commission,

As a resident of the Rocky Mountains, I find it immensely important to make my voice heard to you on the crucial issue of solar power. Encouraging the increased use of solar energy is vital to preserving our nature, our winters, and our planet. This is vital to any part of the country and the world, but it is especially relevant in Utah and the Rockies, which have some of the most beautiful environments in all of planet Earth. This is why I cannot be silent and must implore you to say NO to Rocky Mountain Power's proposal to hike the rates on net-metering for solar customers. We should be encouraging more people to use solar power, not less. Please consider your environment, your children, and the future of mankind when making this decision. Thank you for reading, and have a wonderful day

Mitchell Drew

Tue, Nov 22, 2016 at 6:16 PM

To: psc@utah.gov

Last year a representative of Rocky Mountain Power stopped by my house and also at the homes of several of my neighbors and asked us to have our air conditioners modified with "Cool Keeper". Our Cool Keeper at our previous home had malfunctioned two years in a row and the contractors seemed to struggle with the repairs. So we had it disconnected. I wanted to help out on hot sunny days but did not want to put up with the problems I had previously encountered. So I asked about other options and was told there are none. Then I thought about solar panels. Solar just makes sense to not only reduce my demand on the grid but helps supply my neighbors.

I studied systems and options. Asked for bids and advice and had panels installed on my roof. What a wonderful and low impact way to reduce stress on the grid. So I am surprised when I see Rocky Mountain Power discouraging residential solar. But as I read online it appears that it is nearly exactly the same attack with the same phrases and strange "facts" as in other states.

I encourage the careful study and consideration of the actual costs and benefits that are related to solar and not rush into decisions that may not take into consideration all factors. Please contact me if I can be of any assistance with this matter. Thanks.

Lee Robinson <Lee_Robinson@byu.edu>

Tue, Nov 22, 2016 at 6:18 PM

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

It has come to my attention that there is a proposal from PacificCorp-RMP (Advice No. 16-13) filed November 9, 2016 to change the rate structure for rooftop solar customers. I am writing to express my objections to these rate changes. I already have solar panels on my roof so as I understand it I would be exempt from these changes but I a) do not feel secure in my exempt status, if RMP can up the rates for future business then they can change my rates too, at a later time, using this current change as a precedent and b) Rocky Mountain Power currently has a monopoly on energy in the state of Utah. I have no choice but to buy power from them. I made the choice to install solar panels and now I am being punished for generating clean energy and creating jobs for those who work in the solar industry.

Please suspend the tariff, do not let it take effect December 9, 2016. This rate change will have a huge negative impact on private citizens such as myself. Rocky Mountain Power should have to go through the normal rate changing process for solar customers.

Clean energy is a very important issue that should not be political. Installation of solar panels on private homes should be encouraged with tax incentives. The price of solar panels has gone down over the years, making it more affordable for private home owners to install solar. This is a good thing. We should be harvesting power from the sun. The sun is a sustainable power source. Business growth in the solar industry is good for the people of Utah. Private installs of solar panels creates jobs, which in turn helps the economy in Utah. When I decided to install solar panels on my home I saw it as a win win win scenario. I win because I lower my power bill, Utah wins because of the positive impact on the economy and future generations win because we tap into a sustainable energy source that creates clean energy. We all share this planet and we need to figure out how to enjoy energy production with less impact on the earth. Eventually fossil fuels will run out. Let's focus on energy that will be sustainable for our children and our children's children.

Thank you for asking for public input. The deadline for public comment should be extended. Today is the deadline and it is the week of Thanksgiving. Many people who normally would comment are already celebrating the holiday with their families. Please extend the public comment deadline. Please, I urge you to reject PacificCorp-Rocky Mountain Power's rate change request. A rate change of this magnitude will stunt the growth of this industry and add to the notion that Rocky Mountain Power is a monopoly.

Matthew Owens <mattowens@byu.edu>

Tue, Nov 22, 2016 at 6:24 PM

To: psc@utah.gov

Dear Commissioners,

I am opposed to the Rocky mountain proposal. Docket #16-035-T14. Please do not allow it to be fast tracked. Please have RMP utilize the regular rate increase channels thus allowing for proper, timely and complete review of the proposal.

My rooftop solar array is slightly over sized. Although I have nighttime power demands, the result is that daily i make a non refundable donation of power to RMP. Most solar array , All arrays that i am aware of are considerably oversized. These systems are providing a significant subsidy of free power to RMP. In fact, the only day that they don't subsidize the power on the grid is that one hottest day of the year . And on that day the arrays are either only a slight demand or no demand at all! A tax would be an additional cost to people who are already subsidizing the utility company .

In conclusion, let me reiterate my opposition to Docket #16-035-T14. It is not getting proper review and it is a bad proposal. A public monopoly should not be allowed to make unwarranted rate hikes, especially without proper review.

Pacificcorps RMP's Advice No 16-13

1 message

Cesar Sandoval <cesars1974@icloud.com>

Tue, Nov 22, 2016 at 6:24 PM

To: psc@utah.gov

To Whom It May Concern

I am writing this in regards to PacificCorp RMP's "Advice No. 16-13" filed November 9, 2016 that would change the rate structure for rooftop solar customers.

In particular I urge you to suspend the tariff and not let it take effect December 9 as Rocky Mountain Power has proposed and ask that they continue using the normal rate making process for its proposed change.

I currently own rooftop solar panels and am hoping more people will invest in them to help slow climate change. This change in the rate structure could severely hurt the solar industry and prevent people from investing in something that can be both cost beneficial and environmentally friendly.

Thank you for your time,

Dave Bean <contact@davebean.net>

Tue, Nov 22, 2016 at 6:25 PM

To: psc@utah.gov

Dear Commissioners,

I am writing to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I believe that RMP's proposed tariff not be approved and instead require that established procedures be used for any rate adjustment.

I believe that this proposed tariff would have negative consequences, not just for current and future solar power customers, but for Utah's general public and the progress of the energy industry in Utah and Utah's sphere of influence. The continued expansion of rooftop solar power helps to democratize Utah's energy needs, reduce our reliance on increasingly outdated, destructive, and overly-centralized power sources, and reduce cost by increasing competition in the energy market. Utah's energy infrastructure should work towards the public's general benefit, with RMP designated as compensated caretakers of this energy infrastructure—public good & future progress should not be sacrificed in order to protect RMP's profits and status quo. If there are changes that need to be made to better accommodate the affects of increased solar power production on our current power infrastructure, these should be studied and implemented not by RMP, but by through the public service commission, working for the benefit of the people of Utah.

Thank you for the consideration and for accepting public input. I respectfully request that PacifiCorp-RMP's current rate change request be rejected.

Regards,

David Bean

To: psc@utah.gov

Dear Commissioners,

I am writing to recommend that you suspend PacifiCorp-RMP's "Advice No. 16-13" and the proposed rate increase.

I personally am a solar user and while I know the proposed rates will not affect me, I have concerns for potential future solar users.

In all honesty, I have not taken the time to truly study out PacifiCorp's proposal. The only information I received is from my solar company. I understand the information they provided me may be biased and one-sided. That being said, is it too much to ask to give everyone more time to understand the proposal?

If PacifiCorp truly is incurring more of a cost because of solar users, then it makes sense for them to be able to pass that cost on. However, if they are simply getting less revenue because solar users are buying less power, then it doesn't seem right for them to be able to increase fees against those users. I understand they are a business and need to make money, but the information I've seen portrays that they are unfairly targeting individuals who have taken steps to produce our own power.

Thank you for taking the time to read my opinion. I work for a government entity and understand how frustrating and thankless of a job it can be. I also know that there is much about this issue I do not understand. I trust that you will make the best decision for all the stakeholders.

Best Regards,

Dear Commissioners,

As a Solar Owner, I am adamantly opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes. It seems unprofessional and unethical that Rocky Mountain Power has left the least amount of time for public comment or for anyone but RMP to be able to provide research or analysis for consideration. I also don't like that they have chosen the week of the Thanksgiving holiday for the deadline for public comment to discourage participation. This deadline is unreasonable and should be extended.

I feel that Rocky Mountain Power should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. Not am I a rooftop solar, my close friend is the founder of Intermountain Wind and Solar and has employed my Brother in Law and many of my friends. He's grown this business for the last 8 years and it's shame to allow a monopoly to come in and bulldoze all of their hard work and aspirations. Rooftop solar adds value to the power system and grid. The myth that RMP and others are trying to sell you on how bad rooftop solar is infuriates me.

This change will not only increase rates, the change would impose a 3-tiered rate system on solar customers only that would double or triple the payback period for a solar investment. It is clearly a decision by RMP Brass to save their profits in an already monopolistic industry. The change is **anti-solar** and **anti-business** that has the potential to disrupt the industry on a national scale.

If accepted, it very well could destroy the solar industry overnight and eliminate thousands of jobs and wreck the livelihood of thousands of ~~ax~~ Paying Utahans. Destroying the solar industry seems like a disregard for the quality of our air and other environmental concerns. It is also a loss of freedom to choose how I power my home. I'm astounded by this proposal and view it as a drastic overreach by a government regulated monopoly

Rocky Mountain Power's rate increases will ~~ef~~ effectively eliminate future investments in rooftop solar and significantly harm Utah's rapidly growing solar industry and eliminate consumer choice in energy production.

I would like to sincerely thank you for accepting public input. I do hope you will extend the deadline for public comment. I respectfully request the PSC, in the interests of ratepayers and the Utah public, reject PacifiCorp-RMP's current rate change request.

Thank you,

—

Lance Jeffery

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

Sincerely,

Corbin Earl, Lehi, Utah

To: "psc@utah.gov" <psc@utah.gov>

I am writing to you about the request from Rocky Mountain Power (RMP) to increase fees paid by those of us who have net metering solar systems. I am against this increase and don't agree with RMP's reasoning. RMP touts that they have 3.3 million solar panels (not sure if that number includes the private solar panels in the system) yet they want to punish those who have private solar systems. They claim that if we have a solar array that we don't pay for the infrastructure to keep of the grid in their service area. I disagree, Utah is growing and the overall demand for power is increasing and since those with solar systems help reduce the peak power demand on the system (similar to those conserving power using various methods) which reduces the need for a new power plant, how much would that cost? Also, those with solar systems continue to use electricity produced by RMP at night or on cloudy days, so RMP is still getting paid, just not as much, by all power users of the electric grid.

Solar power also is helping to reduce emissions from existing power plants as well as green house gasses, which they produce. So why punish those who are also helping the air quality of the overall area and reducing the carbon foot print. It seems that while RMP is touting their involvement with wind and solar power, that they are being hypocritical when they say they and others without solar systems are impacted negatively by those with net metering solar systems. In my opinion they are more concerned by their loss of overall revenue by the loss of electrical consumption from everyone in their service area. RMP should be grateful to those installing net metering solar systems, because with the regulations on existing coal power plants and the cost of a new power plant, net metering solar systems are helping to keep the electricity flowing at a reasonable cost.

Please do not "punish" those with net metering solar systems by allowing RMP to increase any fees which we presently pay to be hooked up to the electrical grid.

Thank you,

Robert Radtke, PhD.

1 message

Brad Dorner <bdorner@gmail.com>

Tue, Nov 22, 2016 at 6:35 PM

To: psc@utah.gov

Dear Commissioners,

I want to express my strong opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. Please suspend the tariff and do not let it take effect December 9th as Rocky Mountain Power has proposed. These type of changes should be required to go through and require the normal rate-making process.

The solar system that I had installed last year helps the environment, helps me and my neighbors during peak usage times, and was an investment I made for the future of my family. I see this as no different than the solar systems that the power company is creating themselves. The one difference I see is that I have to maintain my system myself even though I help RMP produce power when they need it most. Sense I produce more power than I use most of the time. Specially during the summer when everyone is running their air conditioners

I invested in solar for several reasons. First. It is good for the environment. Second, it made sense for me to do so as it would save me money in the mid term, 7 to 10 years, and it was some thing that would improve the value of my home. Both of these would be eliminated by RMP's request. Third, RMP kept telling me they could. It provide the power needed during high demand periods, like those during summer heat waves. So in installing solar I would be helping out during those time RMP expressed power concerns. There were more reasons but those are the primary ones.

RMP's move to make this request is nothing more than an attempt to control the power and energy market. I consider this an attach on my personal freedom and rights. It negates all of the reasons to put a system in and allows a monopoly to control how all of us obtain and use electricity. Why are they allowed to ask me to invest in their solar and other green power programs, which they benefit from, but I can't invest in my own without them also trying the profit from it? Seems very one sided to me.

Thank you for allowing me to express and voice my concerns. Please reject RMP's rate change request. Not only for my benefit but for the interest and be fit of the whole community in which I live.

Again thanks

Reply-To: Alyece Judd <judd_1414@yahoo.com>

To: "psc@utah.gov" <psc@utah.gov>

To Whom It May Concern,

I am writing this in regards to PacificCorp RMP's "Advice No. 16-13" filed November 9, 2016 that would change the rate structure for rooftop solar customers.

In particular I urge you to suspend the tariff and not let it take effect December 9 as Rocky Mountain Power has proposed and ask that they continue using the normal rate making process for its proposed change.

I currently have friends that have rooftop solar panels and I am hoping more people will invest in them to help slow climate change. This change in the rate structure could severely hurt the solar industry and prevent people from investing in something that can be both cost beneficial and environmentally friendly.

Thank you for your time,

Alyece Judd

Don't kill solar

1 message

sam taggart <smtggrt@gmail.com>

Tue, Nov 22, 2016 at 6:37 PM

To: psc@utah.gov

To whom It may concern:

I am extremely troubled about the new proposals being considered to combat / offset the residential solar. I have been following the news reports, and online articles, all which create fear as of Dec 9. Meaning should I proceed with my own solar project, no. I must now wait until August to understand the real impact of what is being considered. This is unfair and unreasonable as an energy consumer. I want freedom of choice and want to make financial decisions that are good for my family, now. I please ask that you honor the current net metering plan until August, I can proceed with my project. Additionally, as a "Public Service" please don't kill competition.

I have begun following the recent events that regarding power generation, the public impact, and most importantly RMP role. It is obvious that RMP is wanting to kill residential solar to protect their own interests and revenue. That means taking away choice for me, the homeowner, who wants to go solar for financial and environmental reasons. The inversion in Utah is horrible, while you may say that most of this is cause by cars and industry , some can be attribute to power generation. Anything counts. As members of the public service commission, please do not allow RMP ambiguity around the rates and net metering.

Clean energy, clean jobs!! Is there a public meeting for public comment, or just email. The newly proposed net metering changes from RMP require more public input than just an email. The residential solar industry is growing faster than any other job market, and now the Dec 9 date will cease solar sales, kill installation jobs, delay homeowner improvements, until the commission reviews and votes on the RMP new rates.

Docket number 16-035-T14 – what a great read. As a clean energy advocate and residential solar consumer, I find this proposal to be self-serving to RMP, and does no public service. The Dec 9th date creates fear and doubt since the August net metering changes are not known, the docket reads as if there is a grandfathering period. The months of delay will kill solar immediately, jobs will be lost and consumer will have no choice. I cannot think of any product/service that I purchase that I have no choice.

I am writing to express my concern with Docket 16-035-T14, and the impact it will have on local businesses and consumers. The Dec 9th proposed rate change will halt solar activity and sales, especially since a decision will not be made until the August timeframe, 136. As of Dec 10th a consumer will now be subject to any as changes described in 135A and will NOT be confident in making a solar investment. RMP's power and position with this docket creates consumer anxiety. For instance, line 225 states that current NEMs will be honored based on homeowner investments. But as of 12/10 that same commitment will not be honored. For the public service, I kindly ask that 135A not move forward and allow consumers to make a sound financial decision.

Any good decision is based on sound information. This is true with any potential solar consumer as of Dec 9th, they will not have sound information to execute a residential solar project because of the imposed NEM ambiguity with 135A. I firmly believe that this will have the negative impact of halting solar activity in Utah, thereby eliminating jobs, eliminating consumer choice and environmental. Therefore I ask that 16-035-T14 have no further consideration.

Dear Commissioners,

Thank you for responding to my call but i also I wanted to write a note letting you know I oppose the recent proposal from Rocky Mountain Power and plan do everything in my power to fight it "Advice No. 16-13". I understand that its your responsibility to protect us against Monopolistic practices that are unfair will hurt rate payers and the state. After reviewing other studies (here are some of them) <https://www.brookings.edu/research/rooftop-solar-net-metering-is-a-net-benefit/> i have concluded that the RMP proposal is crazy is aimed at killing their competition (solar) in an unfair way and is completely out of line from what other experts and PUC's are assigning to the "value of solar". This proposal will Kill solar in our sta, and is the worst in the Nation. 3 new fees including a demand charge is completely unfair. Can you imagine anyone signing up for solar when their fee is based on how many appliances are all working at the same time in a given month.. Would you ever sign up for solar not knowing what your fee is going to be every month for doing it? A home-owner could use less energy and less of the grids resources but have a fee thats bigger than their neighbors. The only reason they would propose this would be to kill their competition. A fee structure not only so big but also so complicated that no one would sign up for it. As a Public Service Commission I am asking you to suspend and Veto. Rocky Mountain Power should be required to use the normal rate-making process vs jam this down quickly. Burning coal to power the country is also not sustainable, and the pollution and carbon is damaging our planet, it has to change. Id like to be apart of the Generation to create this change. Also our air quality is gross. We live in one of the most beautiful places on earth yet there are days we can't see the mountain a few miles away and choke down filthy air. On top of that this here is an article in the desert news states its killing a few thousand Utahns a year <http://www.deseretnews.com/article/865560535/Clearing-the-air-That-air-youre-breathing-may-be-slowly-killing-you.html?pg=all>

. By further polluting our air we are killing more people, and making our state less attractive to work and live in. Was there value assigned to that by RMP? Thats real value for us and future generations. I have solar on my home and it powers my home and my family, its incredible actually sun hits my roof and six feet later (vs hundreds or thousands of miles) its powering everything we do. Its a better way to power the world, clean, sustainable, reliable. Plus I want to be able to choose! Also i produced ~6000 KWh of energy more than i used last year that the credits were wiped away before the summer. Did RMP include those extra KWH they got from my power plant on my home in their study? Point being this is really rushed and unfair and requires more time and consideration from you and I am pleading with you to reject it.

Sincerely,

Chance Allred chanceallred@gmail.com cel-801-787-6119 6194 w 10760 n highland ut.

onalee W ilson <onalee.b@aggiemail.usu.edu>

Tue, Nov 22, 2016 at 6:42 PM

To: psc@utah.gov

Dear Commissioners,

I would like to express my extreme opposition to PacifiCorp-RMP's "Advice No. 16-13" filed Nov.9, 2016 that would change the rate structure for rooftop solar customers. I please urge you to suspend the tariff and to please not let it take effect on Dec 9th as Rocky Mountain Power has proposed.

I have family that has made an investment with installing rooftop solar and my husband and I would also like to go rooftop solar when we're in a better position to do so. However, if this fee goes into effect, I understand this could very well undermine the whole solar industry in Utah. This is simply ludicrous, especially when Rocky Mountain Power has been a monopoly for so long. Now that consumers have had the choice of choosing solar for their homes, RMP must be feeling vulnerable to clean energy competition, which is what free trade is all about--the power to choose. A monopoly should not be allowed to squash their competitors when, in my opinion, greed is most likely the main culprit regardless of how RMP may make it sound. Nearly every industry throughout the world knows the healthy challenges of competition, and RMP should not be any different. They should not have the ability to fully regulate energy, and that's what this fee will help them to do.

So I'm writing to you, knowing our government officials are to help in matters of personal freedom and for the common good. It also seems that this fee would be taking away from the vision of the governmental push to invest in solar in the first place. In addition, I have talked to someone more in the know with solar, and they informed me that there are articles and studies from other regions where rooftop solar has proven to have value to the power system and grid.

Thank you for taking the time to listen to my plea to reject PacifiCorp RMP's current rate change request in the best interest of ratepayers and the Utah public. I believe more would have taken the time to write if this wasn't announced so closely to the Thanksgiving holiday, which was probably strategically planned. Therefore, if anything, the deadline should be extended to let this issue be given the full attention and time it deserves with how much is at stake.

Respectfully,

Onalee Wilson

Jen Hudak <jen.hudak@gmail.com>

Tue, Nov 22, 2016 at 6:50 PM

To: PSC@utah.gov

On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems.

The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah.

The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost.

Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed.

Your leadership on this issue is critical. Thank you for your time.

Tue, Nov 22, 2016 at 6:53 PM

To: PSC@utah.gov

Please do not allow Rocky Mountain Power to hike rates on net-metering for solar customers. As a UT resident and staunch renewable energy proponent we cannot allow these surreptitious maneuvers happen. Climate change is real and we MUST encourage and support those that use solar and wind energy, not penalize them. If this does pass that means that those that might have explored solar now will not. This is not acceptable.

Please do the right thing. Rocky Mountain Power's success as a company does not hinge on this- many of those that might invest in solar does.

Thank you.

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

As a concerned citizen of Utah, I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

For reasons that seem to be obvious to us as residents of Utah, these actions of Rocky Mountain Power should not be allowed. They simply should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. These changes proposed by Rocky Mountain Power not only affect me, but every other individual within the state who currently breathes the unclean air we experience within the state. Various articles support that the use of solar helps to reduce the need for other less clean forms of energy generation.

I would personally like to thank the Commissioners for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

My Comments Regarding Docket #16-035 T14

1 message

James Klein <jamesrkj@gmail.com>

Tue, Nov 22, 2016 at 6:59 PM

To: psc@utah.gov

Dear Commissioners,

As a taxpayer I am writing to let you know my feelings regarding the proposed changes from Rocky Mountain Power, "Advice No. 16-13", filed Nov 9, 2016. I ask the Public Service Commission suspend the tariff and prevent it from taking effect on December 9.

I don't feel that punishing solar customers for choosing an alternative power source, other than Rocky Mountain Power, should be punished by the company. The mere fact that Rocky Mountain Power has the power to request such a ridiculous thing only proves the power they have as a Monopoly. This is an obvious move to squash healthy competition when it comes to the generation and distribution of power. To me this would be similar to fuel companies charging more for gasoline to users of Hybrid cars because they don't buy as much as normal customers.

I feel that we as a people need to be looking for better ways to do things. We see it in technology, we see it in medicine. Why should we punish those on the cutting edge of making our state, our country, even our world a cleaner place? Punishing solar panel users will only stand to help Rocky Mountain Power. It is NOT in the best interests of anybody else for RMP to make this change, indeed, the opposite is true. By allowing RMP to charge more money to solar users negates any savings customers would have seen and will discourage people from choosing solar in the future. This is the real issue here! It creates an unfair advantage for the monopoly giant and does not allow the many alternative energy companies to compete and for the customers to decide for themselves, where and how they want their power to be generated.

I appreciate your taking time to consider both sides of this important issue in an effort to make the best decision for the people of Utah.

Regards,
James Klein

Dear Commissioners,

I am adamantly opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes. It seems unprofessional and unethical that Rocky Mountain Power has left the least amount of time for public comment or for anyone but RMP to be able to provide research or analysis for consideration. I also don't like that they have chosen the week of

The Thanksgiving holiday for the deadline for public comment to discourage participation. This deadline is unreasonable and should be extended.

I feel that Rocky Mountain Power should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. Not only do I have family members who have roof top solar but close friends. A good friend of mine owns Intermountain Wind and Solar. He's grown this business for the last 8 years and it's shame to allow a monopoly to come in and bulldoze all of their hard work and aspirations. Rooftop solar adds value to the power system and grid. This rate increase would impose a 3-tiered rate system on solar customers only that would double or triple the payback period for a solar investment. This rate increase is the most **anti-solar** and **anti-business** rate proposal to date across the nation. If accepted, it very well could destroy the solar industry overnight therefore eliminating thousands of jobs and would resulting in us no longer having a livelihood. Destroying the solar industry seems like a disregard for the quality of our air and other environmental concerns. I feel that this is also a loss of a freedom to choose how I power my home. I'm astounded by this proposal and view it as a drastic overreach by a government regulated monopoly. Rocky Mountain Power's rate increases will effectively eliminate future investments in rooftop solar and significantly harm Utah's rapidly growing solar industry and eliminate consumer choice in energy production.

I would like to sincerely thank you for accepting public input. I do hope you will extend the deadline for public comment. I respectfully request the PSC, in the interests of ratepayers and the Utah public, reject PacifiCorp-RMP's current rate change request.

Thank you,

Melody Olson

To: psc@utah.gov

Dear Commissioners,

Our family is opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. We specifically urge the PSC to suspend the tariff plan and NOT let it take effect on Dec. 9th as Rocky Mtn. Power has proposed. We would like to have them required to use the normal rate-making process for any changes they wish to have implemented.

The primary reason we are asking you to do this is for selfish reasons. I have an incurable and fatal lung disease (Non-Specific Interstitial Pneumonitis, or NSIP), that is greatly exacerbated by polluted air. I am on supplemental oxygen, and the air quality in the Salt Lake Valley makes breathing difficult on days with high pollution. We would like more homes to be powered by clean solar energy as ours is, to help me and others like me who love living here, but who have pulmonary-related health problems.

The 2nd reason is that although RMP may offer a grandfather benefit to existing solar customers like us, we've read nothing that would compel them to honor it a few years in the future. We are now on fixed income and we bought solar panels to insulate us from the annual price increases from RMP. The fees RMP is proposing, if applied to existing customers as well, would impose a financial hardship on us.

I just heard about the deadline for input and hope that you will still accept our comments. Perhaps an extended deadline would enable more power customers like us to learn about, and give you their input.

Finally, we respectfully request that the PSC reject RMP's rate change request, to benefit the people of Utah and specifically the Wasatch Front.

Respectfully,

John and Jody Elsholz

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Jason Lund

Dear Sir/Madam,

I am contacting you in regards to the PacificCorp RMP's Advice 16-13 filed 11/09/16.

In particular I want to express and request that you suspend the tariff and not let it take effect December 9, as Rocky Mountain Power has proposed, and ask that they continue using the normal rate making process for its proposed change.

I currently have close relatives that own rooftop solar panels and am hoping more people will invest in them to help slow climate change. This change in the rate structure could severely hurt the solar industry and prevent people from investing in something that can be both cost beneficial and environmentally friendly.

Thank you for your time,

Ivan Sandoval

Dear commissioners, I would like to email you to tell you my opposition to PacifiCorp-Rocky Mountain Power's Advice No. 16-13 filed Nov 9, 2016 and to ask you to suspend the tariff and not let it take effect on Dec. 9th. Please use the normal rate-making process for the proposed changes.

I have a photovoltaic system on my house at this time and enjoy the savings it brings my family and I. I also love the fact that I am contributing to a more clean air environment. I am terribly afraid that if this proposed change is placed into effect, there will be very few new Solar systems installed which will directly effect Utah jobs, the economy, cleaner air and my career as a Solar installer and electrician. All People should have a choice to lower their utility bills by installing "Affordable " solar. For RMP's proposed rate change will make roof top solar not affordable any more. I have read and learned about similar proposals that have been passed in other states that have drastically effected the solar industry in very negative ways. Solar should be embraced not pounded down to the ground by public utility companies that only have their own interests in mind. The proposed rate increase is a very big step in the wrong direction.

Thank you so much for accepting input from the public on this matter . Please don't let this change take into effect.

Sincerely Michael Allen

Steven Schmidt <schmidticus@gmail.com>

Tue, Nov 22, 2016 at 7:23 PM

To: psc@utah.gov

Hi,

I am writing to express my opposition to PacifiCorp-Rocky Mountain Power's Advice No. 16-13.

It is very important that as a state we continue to support the expansion of rooftop solar. The benefits not only help the environment, but also encourages people to become more energy independent, and in the near future as more people also use a home battery, it will make our electric grid more reliable as energy spikes will more likely be handled by local battery power instead of requiring power-plant output increases.

PacifiCorp-Rocky Mountain Power's Advice No. 16-13 would unfairly change the rate structure for rooftop solar customers, and thus will stifle the rooftop solar industry in ways that will be detrimental to the future of these important new technologies. Please, suspend the tariff and prevent Rocky Mountain Power's proposal from taking effect on December 9. Instead, use the normal rate-making process.

Thank you for listening.

Sincerely,

Steven Schmidt

Tony Pavlantos <tony@privalusa.com>

Tue, Nov 22, 2016 at 7:27 PM

To: psc@utah.gov

Dear Commissioners,

I oppose any moving forward to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. Urge the PSC to deny the utility's fast-track request and require it to use the normal rate-making process for its proposed changes.

Low rates to alternative power incentivizes consumers living in Utah metropolitan to use clean energy in hopes of cleaning up our air and allowing them to change into electric vehicles and charge them accordingly . This decreases the vehicle emissions and will considerably clean the air quality of these highly populated areas. I RMP should not be allowed to raise the costs for new rooftop solar customers. The rural areas of Utah make a considerably less income. Alternative power like solar needs to be affordable especially to the ones providing food crops and commercial related solar operations in places with enough space to harvest the abundant energy .

Thank you for accepting public input, though the deadline should be extended. I Respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Thank you

Dear Commissioners,

I am writing to ask you to NOT change the rate structure for those with solar panels.

I have made this short as I just found out that today is the last day to make comment. And I hope that this note will make it to you in time for consideration.

I have made a significant investment for the benefit of our Utah environment. The power required for my neighborhood is reduced now with my house helping to supply power. I find it ironic that after much encouragement from Rocky Mountain Power to conserve more power, that they now want to punish us for conserving too much.

Thank you for excepting public input.

Again, may I ask you to reject the rate change, for the good of Utah's environment that we are fighting so hard to improve.

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

I am opposing the recent proposal from Ricky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, which would alter the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking place on December 9 as Rocky Mountain Power has proposed.

I believe the proposal from Rocky Mountain Power is unfair for customers and homeowners seeking to utilize cleaner sources of energy and lessen their carbon footprint. Rocky Mountain Power should be required to maintain the normal rate making process. As member of the Utah community , I am deeply concerned about the future of our planet. Solar provides an opportunity to turn from the high carbon emission lifestyles of yesterday and seek for a cleaner and more reliable solution. Air quality in Utah must improve, and I believe solar energy is a step in the right direction and must be a part of the equation.

Thank you upholding the value of the voice of the public voice. I respectfully request that you place the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Utah Public Service Commission-

I am attending the University of Utah and am an environmental studies major. The public needs to know that climate change is real and is happening now. I'm sure since you live in Utah you have skied before or have friends who would want to go skiing now, but they can't because it is too warm and has barely snowed this season. Climate change is not a theory anymore, this is a very important issue and is the most serious problem today. Raising the prices of solar panels would make it difficult for people to invest in them and is a step in the wrong direction towards clean energy. Hopefully you will take this into deep consideration.

Thanks,
Mikayla Howitz

Proposed Solar rate changes, PacifiCorp-RMP's "Advice No. 16-13"

1 message

Rachael Sheffield <rasheffield@gmail.com>

Tue, Nov 22, 2016 at 7:36 PM

To: psc@utah.gov

To all of you on the Public Service Commissi on:

I am writing to express my deep concern about the proposal made by Rocky Mountain Power to change the rooftop solar rate structure here in Utah. As the owner of recently installed solar panels, I am very excited about the cleaner power we are producing, as well as the greater move toward self-sufficiency and less dependence on others providing the power we need in our home. We already face 15 years of paying for the investment in the solar panels, which will be worth it as we get closer to our goals. In addition to the price for the panels and installation, we continue to pay Rocky Mountain a monthly fee plus taxes for the ability to stay "on the grid" during the times we may not be able to provide for our own.

There are several reasons why the proposal by RMP is so disturbing. One is that it seems to be their way of discouraging homeowners from finding ways to produce more energy on our own because the return on our investments is greatly diminished with the proposed rate hike. I can understand the need to pay for the privilege of still being tied into RMP , but when we are producing our own power, it does not seem equitable to continue to pay into the other production methods. It also seems that RMP feels like it can make such a request because they already have a monopoly on providing electricity , and rooftop solar producers are threatening to take away some of that monopoly . I would think that RMP would be grateful that solar power being produced helps to lessen the impact that comes when electricity is in high demand, such as during peak summer seasons. This proposed rate hike and re-structure seems to be self-serving and certainly not customer oriented.

My other concern is that the process for making this proposal has not been done in the normal way when changes are requested. My understanding is that RMP has proposed to begin this "tariff" on December 9, a mere two weeks away , with very little public input and little time to completely consider all the ramifications of such a rate change. I strongly urge you, in your capacity as the watchdog for citizens of Utah, to not let this happen at all, or at very least until the normal rate-making process has been followed.

I appreciate your consideration of my concerns.

Sincerely,

Rachael Sheffield

To: PSC@utah.gov

Hi,

As a Salt Lake City native and someone who loves this city more than anywhere in the world, I (along with everyone I know in this city) beg you, please do not hike the rates on net-metering for solar customers.

We all know our air quality is a reason people don't move here and it takes people away from our growing economy. Please protect our health, protect our winters, and protect our economy and help fight climate change.

We can do this together and make our economy stronger for it.

Thanks for your time,

-Baya Voce

Evan Blair <evanmblair@gmail.com>

Tue, Nov 22, 2016 at 7:46 PM

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Evan Blair, evanmblair@gmail.com, Lehi, UT

To: psc@utah.gov

Dear Commissioners,

I am asking that you reject Rocky Mountain powers proposal to add a service rate to solar customers. First of all we have a serious air quality problem in the Wasatch front. Penalizing solar customers who are making an effort to curb the burning of fossil fuels for the health and wellbeing of all our neighbors is a horrible idea.

Please reject Rocky Mountain Power's proposal and consider the input of citizens that must live in this valley .

Respectfully,

Terri Gilfillan

Dear Commissioners,

I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I and all my family and neighbors urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I have a right to choose how I supply power to my home. This is unconstitutional and restricts free trade. Why would you or how can we as a state limit access to clean and efficient energy. This would unreasonably raise the costs for new rooftop solar customers as well. The solar industry is providing so much of an economic boom in Utah that to not suspend the proposal, therefore effectively killing the industry, is going to cause hardship for so many people and business'.

The use of renewable energy, in particular rooftop solar, is a win, win, win for everyone. From the economic boom it provides to residential customers and business', to the power company being able to more efficiently and more effectively keep up with demand charges, and lastly reducing our carbon footprint which Utah so desperately needs.

Lets cause change here. Lets be at the forefront of this industry for others to follow. Our future generations need this and depend on us to put our foot down and demand a better place for them then what we are currently leaving behind. I have read many articles and seen countless studies from other regions where it has been proven that rooftop solar has significant value to the power system and the grid.

Thank you very much for accepting public input. Please keep in mind the interests of the ratepayers and the general public. Please reject PacifiCorp-RMP's current rate change request. Or suspend it until we can find a more reasonable agreement. If we do not then we again are effectively killing the entire industry and we will regret that decision.

Corey Henderson <corman@cormander.com>

Tue, Nov 22, 2016 at 7:53 PM

To: psc@utah.gov

Dear Commissioners,

I urge you to reject or suspend the request of Rocky Mountain Power to pass a rate increase for solar net-metering customers.

I understand the business aspect of their proposal, and as an Engineer by trade, I understand the real world impacts as well. The bottom line is, now is not the time to change the net-metering arrangement that's in place. Solar installations have not even come close to the point where it has become a burden on the electrical grid. As it stands, and will be for the foreseeable future, home solar installs work to benefit the efficiency and robustness of the grid.

The two main arguments I hear from the business are; 1) lost revenue from customers who generate their own electricity, and 2) net-metering agreements don't pay their "fair share" of maintaining the grid.

To the first item I would like to remind the commission that while they pay less on their electricity bill, they also save the utility on various costs such as power transmission losses and reduction of peak power demand, due to solar homes feeding power to their neighbors.

To the second; my base connection fee to the grid after taxes and minimum rate charges, ends up as \$9.01 per month on my electric bill. This is what I pay to maintain the grid. This is what everyone pays. If this amount is not enough to maintain the grid, the rate ought to be increased for everybody, not just solar customers. Price the rates fairly; everyone pays the same base, and then pays for the power they use. To tip the scales against home solar generation is both greedy and unethical. Greedy, because the true purpose of this targeted rate increase is to send a message of stifling competition, and unethical because it reduces freedom of choice of those who would make investments in technology that collectively benefits wider society by providing cheaper, more efficient, and much needed clean-air energy sources.

In my professional opinion, RMP should be using their money for investments in smart grid and energy storage projects, rather than lobbying to protect their monopoly secured profit stream.

I can give additional testimony upon request.

Thank you for your time,

Corey Henderson

Nate Casados <marththeweird@gmail.com>

Tue, Nov 22, 2016 at 7:59 PM

To: psc@utah.gov

Rocky Mountain Power should not raise pricing for rooftop solar companies and here is why.

Rocky Mountain Power is owned by the PacifiCorp, although this is not a problem, it's a good base for the problem. NVEnergy, Nevada Energy, another power company owned by PacifiCorp, had raised the price on residential solar in 2014.

This effectively killed the solar market in Nevada. Many companies that were doing good there had to pull out because sales were no longer good. It just was not worth a customers money to afford solar when it did not actually save them much money.

This really puts a curb into state business tax revenue when companies have to stop selling in a particular state because they're unable to maintain sales. It affects the state government in this way which affects the community at large.

Right now, a major benefit of solar power is it takes stress off the grid. This means less chances of black outs during particularly high usage times of the year, such as a hot summer day and every one is running air conditioning. This helps keep it stable.

While solar panels are at a good deal now, it offers a great incentive for citizens to be doing their part to help the environment as well. Most solar panels pay themselves off in 5 to 10 years for not just their financial cost, but their ecological cost as well. This is because the citizen with solar will need to rely less on Rocky Mountain Power (RMP)'s carbon costs for generating power. Although that power will definitely be used elsewhere, it's still good for our environment.

So I've now told how it's at least commercially, economically, and environmentally good. Now let's get to some hard facts. As a worker in solar I see customer power usage all day and residential solar production estimates for installed systems. In a report from the national renewable energies lab, (attached), one of the tools I use, Aurora, is shown to be within 3% accuracy to real solar panel systems.

Another tool we use based off PV Watts, is also within 5% accuracy to Aurora. Now back to customer power usage, most solar panel systems can cover 100% of any one citizen's home electrical use. Get this too, most homes can hold as many panels as needed to accomplish this.

Looking to the future we have a chance to be a very green community with a very bright future. Allowing solar power to flourish with citizens is a great new brick to add to the foundation holding up our state.

Do not allow Rocky Mountain Power to raise the price on customers. It will harm and possibly cease the residential solar market here the same way it did in Nevada.

Thank you for reading,

Nathan Casados

NREL	National Renewable Energy Laboratory
PV	Photovoltaic
RMSE	Root-mean-squared error

1 Introduction

Aurora Solar Inc. is building a cloud-based optimization platform to automate the design, engineering, and permit generation process of solar photovoltaic (PV) installations. They requested that the National Renewable Energy Laboratory (NREL) validate the performance of the PV system performance simulation engine of Aurora Solar's solar design platform, Aurora. In previous work, NREL performed a validation of multiple other PV modeling tools [1], so this study builds upon that work by examining all of the same fixed-tilt systems with available module datasheets that NREL selected and used in the aforementioned study. Aurora Solar set up these three operating PV systems in their modeling platform using NREL-provided system specifications and concurrent weather data. NREL then verified the setup of these systems, ran the simulations, and compared the Aurora-predicted performance data to measured performance data for those three systems, as well as to performance data predicted by other PV modeling tools.

2 Methodology

Aurora Solar and NREL modeled three PV systems using the Aurora platform:

Table 1: Systems Modeled by Aurora Solar in Aurora

System	Size	Type	Location	Year Modeled
RSF1	385 kW	Fixed tilt	Golden, CO	2011
RSF2	408 kW	Fixed tilt	Golden, CO	2012
Visitor Parking	524 kW	Fixed tilt	Golden, CO	2012

Aurora Solar used system specifications and concurrent weather data provided by NREL to model these systems; see [2] for more detailed system specifications. NREL then verified the setup of these three systems in Aurora's platform, ran the simulations within the Aurora platform, and used the resulting hourly Aurora-predicted performance data in this validation study. NREL also verified that the transposition model and module model type were consistent with the methodology of the previous validation study.

The same validation methodology that was used in [1] was applied to the current study. In summary, systems were modeled as closely as possible using high-quality measured concurrent weather data as an input. Quality-control procedures had been implemented in the previous study to remove hours affected by sensor errors, component downtime, system downtime, nighttime hours, and hours affected by snow; the same quality-controlled datasets were used in the current validation. See [1] and [2] for further methodology detail.

A crucial aspect of PV modeling is understanding the magnitude of loss assumptions that are used by a PV modeling tool to account for phenomena that are not explicitly modeled, such as soiling effects, system availability, etc. NREL used all of Aurora Solar's default loss assumptions in these simulations (which are based on the default loss factors in the PVWatts tool) except for the availability loss, which was set to 0% because we compared results to data that were quality-controlled to remove downtime. This procedure is consistent with the

methodology used in [2] to determine loss assumptions, and it results in a total loss assumption of 10.5%, compared to Aurora's usual default loss assumption of 13.2%.

3 Results

The results from the Aurora simulations were compared to quality-controlled measured data and other PV modeling tools at both annual and hourly timescales.

3.1 Annual

The annual error of a PV modeling tool's prediction quantifies the over- or under-prediction of an annual energy estimate compared to measured data for that time period, normalized by the measured energy. On an annual basis, Aurora performs similarly to other tools examined in previous validation studies. Figure 1 shows Aurora's annual energy predictions, with its default loss assumption of 10.5%, compared to four other tools, also using each tool's default assumptions (a table showing those default losses can be found in [1]). Aurora compares within the same range as the other tools, showing annual error within $\pm 6\%$ of measured data for all three systems.

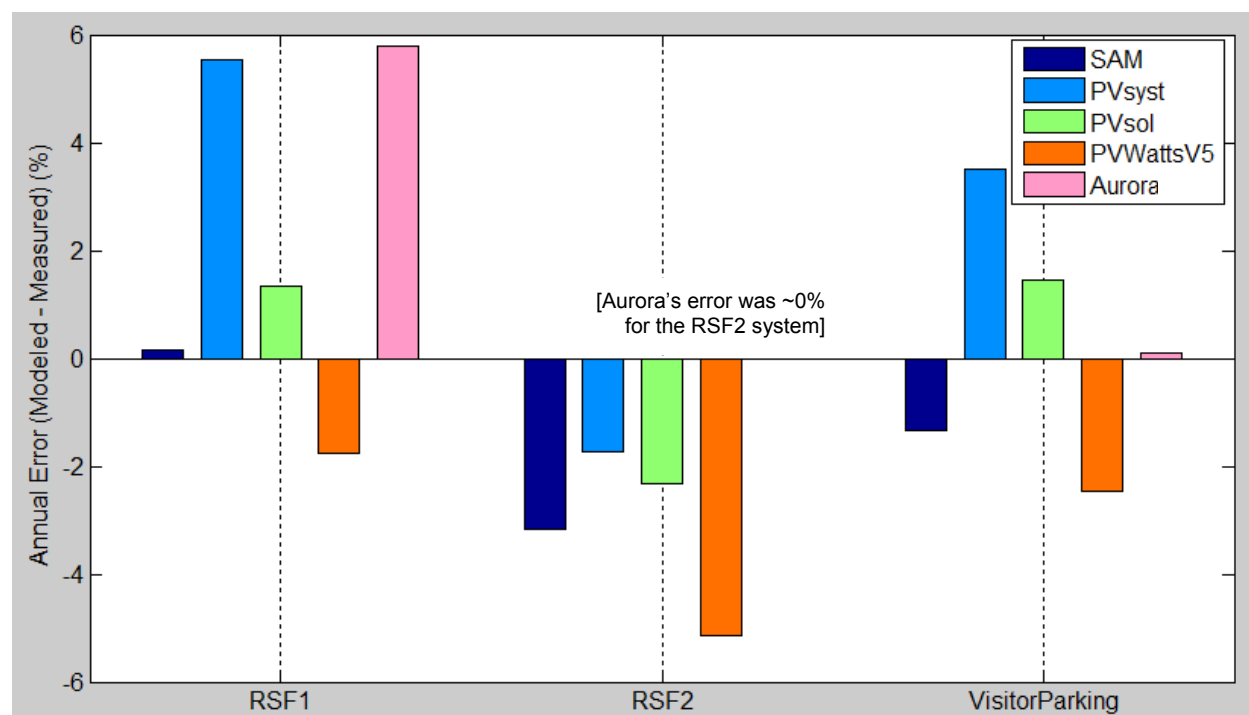

Figure 1: Annual error of tools using default loss assumptions.

3.2 Hourly

The normalized root-mean-squared error (RMSE) evaluates the PV modeling tool error on an hourly basis; see [2] for the definition of this metric. Aurora's hourly normalized RMSE falls within 4.5% for each of the three systems examined, which is comparable with the other tools analyzed in previous validation work using their default losses. To help demonstrate the necessity of including some form of losses, several tools were also run with the losses zeroed out. As expected, the zero-loss configurations show a higher RMSE than all of the default loss

configurations (including Aurora) for all three systems. This result is seen because real systems *do* experience the losses that were zeroed out in the zero-loss configurations.

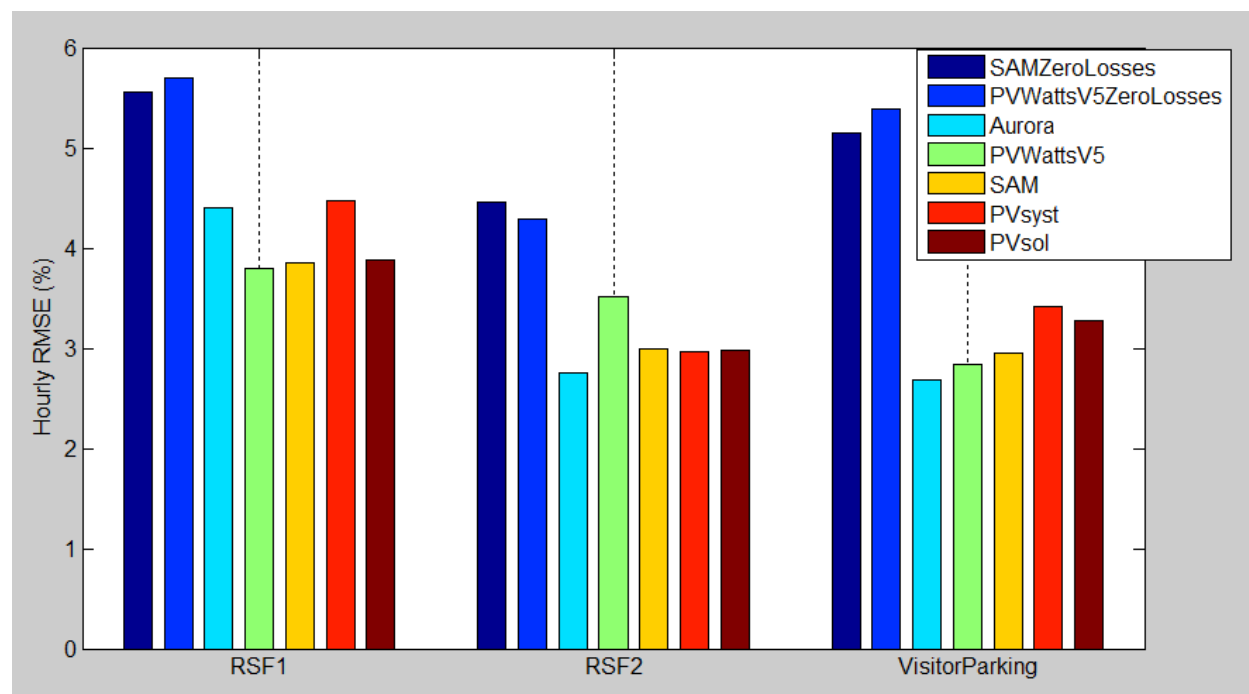

Figure 2: Hourly normalized RMSE of tools.

4 Conclusions

Three systems were initially modeled by Aurora Solar, and NREL subsequently verified, simulated, and analyzed the simulated performance as compared to measured data and other PV modeling tools that had been analyzed in a previous validation study. The Aurora predictions were comparable with predictions by other PV modeling tools, achieving an annual error within $\pm 6\%$ and an hourly normalized RMSE within 4.5% for the three systems simulated. The Aurora predictions compare more closely with the default loss configurations of other tools, rather than the zero-loss configurations, which is the expected result.

Because only three systems were analyzed in this study, this serves as a good preliminary validation of the Aurora platform, but more extensive validation with additional systems and a greater variety of system locations, types, and other aspects could provide additional information about the strengths and weaknesses of this PV modeling engine. This study does not comment on the usability of the product.

PSC Docket #16-035-T14 Letter.pdf

241K

The Public Service Commission,

Regarding : Docket #16-035-T14

My name is Chad Hofheins and I have been a Utah resident for 40 years. I have been in the construction business for 19 years and have been specializing in the solar industry now for 9 years. During this time I have been able to build my business slowly again and now I employ 45 fellow Utahns.

Rocky Mountain Power's proposal to have all new net metering customers after December 9, 2016 be placed on a new rate that has not yet been decided is necessary by your body or defined will create significant uncertainty for my business and it already has created that uncertainty. It will be unethical for me to offer a rooftop solar product to homeowners across the state without knowing how rates may change. This proposal will halt my business activity and already has cause some of my employees seek another job and quit working in the great state of Utah.

I ask you to please reject Rocky Mountain Power's proposal and maintain Utah's status as one of the most business-friendly states in the country. If this Rate Proposal is approved, it will be detrimental to my business and I will be forced to make changes to how my business operates. I was faced with this in 2007 when the economy collapsed and forced 60 of my employees out of work. I would not like to see this happen again.

Thanks for your time,

Chad Hofheins

To: psc@utah.gov

To Whom It May Concern

I am writing this in regards to PacificCorp RMP's "Advice No. 16-13" filed November 9, 2016 that would change the rate structure for rooftop solar customers.

In particular I urge you to suspend the tariff and not let it take effect December 9 as Rocky Mountain Power has proposed and ask that they continue using the normal rate making process for its proposed change.

I currently own rooftop solar panels and am hoping more people will invest in them to help slow climate change. This change in the rate structure could severely hurt the solar industry and prevent people from investing in something that can be both cost beneficial and environmentally friendly.

Thank you for your time,

Christian C Sandoval

Tue, Nov 22, 2016 at 8:07 PM

To: psc@utah.gov

Type this in and send it:

@everyone: here is the sample letter to use:

Dear Commissioners,

I strongly oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Dallin Maw

Tue, Nov 22, 2016 at 8:07 PM

To: psc@utah.gov

Dear Commissioners,

We are in opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. We urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

We feel RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. We feel this adds value to our home. We feel it helps clean our environment and helps Salt Lake City's pollution problem. We have read articles and studies from other regions where they have found rooftop solar to have value to the power system and grid.

We would to thank the Commissioners for accepting public input, though the deadline should be extended. We respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Concerned solar citizens,

Shane and Rachelle Martin

To: psc@utah.gov

Greeting: Dear Commissioners,

I oppose PacifiCorp-Rocky Mountain Power's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge you to deny the fast-track request and require the use of the normal rate-making process for the proposed changes. This quick deadline is unreasonable and should be extended.

I feel that Rocky Mountain Power should not be allowed to raise the cost to homeowners who choose to use rooftop solar power. I am a professional working in the outdoor industry and I am a firm believer in climate change and I feel that this decision by RMP is a threat to my livelihood, and the future of Utah and the entire planet. I also feel that it is unjust for them to profit and penalize those who choose to use solar power, who are trying to do the right thing, simply because RMP sees solar power as a threat to their bottom line. I would urge and hope that RMP could become a more forward thinking business, turn away from coal and invest in their own solar and wind programs in a way that does not penalize people for doing what is right to advance our state to a sustainable society that is at the front of making a better world and not stuck in the past simply because we wish to fill our pockets. If anything RMP and the State of Utah should be rewarding those who choose to install and use solar panels.

Thank you Commissioners for accepting public input, though the deadline should be extended. I respectfully request that the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Dear Commissioners,

I strongly oppose the proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016. It's uncalled for, unfair and based off of biased incomplete reports from Rocky Mountain Power. Clean energy benefits everyone and the environment. RMP is acting like a monopoly. Completely unfair that they would impose fees on residential roof top solar companies in an effort to make you buy all your power from them in from their solar farms.

This will also greatly effect all the solar jobs and economy in Utah.

Thank you for listening , please reject Advice No. 16-13.

Sincerely,

Jake Turk, American fork, UT

To: psc@utah.gov

Dear Commissioners,

Please take note of the strong public opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov . 9, 2016, that would change the rate structure for rooftop solar customers. The PSC should deny the utility's fast-track request and require it to use the normal rate-making process for its proposed changes.

If prices are raised the availability of solar to middle and low income homes will decrease sharply . The earth is warming, it's an indisputable fact, and we need to take every measure available to slow its warmth. This includes moving away from the traditional means of electricity production.

Thank you for considering the public input in our request for the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Scott Azevedo

To: psc@utah.gov

Dear Commissioners,

I would like to adamantly oppose PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

RMP should not be allowed to raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. The fact that RMP consistently brings new unethical legislation each year is like fighting a cancer. Why can't we just find a cure and make them stop trying to monopolize the market? Also, there are several peer reviewed articles and research studies from other regions where they have found rooftop solar to have value to the power system and grid.

I would like to thank the Commissioners for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers, a moral ethical code of conduct, and the Utah public, to reject PacifiCorp-RMP's current rate change request. Have a happy and safe Thanksgiving holiday

To Whom It May Concern

I am writing this in regards to PacificCorp RMP's "Advice No. 16-13" filed November 9, 2016 that would change the rate structure for rooftop solar customers.

In particular I urge you to suspend the tariff and not let it take effect December 9 as Rocky Mountain Power has proposed and ask that they continue using the normal rate making process for its proposed change.

I currently own rooftop solar panels and am hoping more people will invest in them to help slow climate change. This change in the rate structure could severely hurt the solar industry and prevent people from investing in something that can be both cost beneficial and environmentally friendly

Thank you for your time,

Eder Lopez

Jordan Galley <jgalley@apexsolarsolutions.com>

Tue, Nov 22, 2016 at 8:14 PM

To: psc@utah.gov

Dear Commissioners,

I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I and all my family and neighbors urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I have a right to choose how I supply power to my home. This is unconstitutional and restricts free trade. Why would you or how can we as a state limit access to clean and efficient energy. This would unreasonably raise the costs for new rooftop solar customers as well. The solar industry is providing so much of an economic boom in Utah that to not suspend the proposal, therefore effectively killing the industry, is going to cause hardship for so many people and business'.

The use of renewable energy, in particular rooftop solar, is a win, win, win for everyone. From the economic boom it provides to residential customers and business', to the power company being able to more efficiently and more effectively keep up with demand charges, and lastly reducing our carbon footprint which Utah so desperately needs. Lets cause change here. Lets be at the forefront of this industry for others to follow. Our future generations need this and depend on us to put our foot down and demand a better place for them then what we are currently leaving behind. I have read many articles and seen countless studies from other regions where it has been proven that rooftop solar has significant value to the power system and the grid.

Thank you very much for accepting public input. Please keep in mind the interests of the ratepayers and the general public. Please reject PacifiCorp-RMP's current rate change request. Or suspend it until we can find a more reasonable agreement. If we do not then we again are effectively killing the entire industry and we will regret that decision.

Thanks,

—

To: psc@utah.gov

Dear Commissioners,

I would like to express my opposition to the proposed rate change by Rocky Mountain Power .

Rooftop solar is a viable addition to the power grid and a growing industry that employs many people in Utah.

Solar not only provides clean energy but helps diversify the power grid. I think micro energy generation is very important in terms of national energy security. The more sources of energy we have the harder it will be for our enemies to cripple our communication and our defenses.

Thanks for taking the time to consider this proposal and reject this rate increase or at least extend the comment period.

I just cannot understand who benefits from this proposed change.

Sincerely , Tom Barber 345 S Main Providence Ut. [435-881-7707](tel:435-881-7707)

Julianne P AUL <Julianne_P@msn.com>

Tue, Nov 22, 2016 at 8:20 PM

To: "psc@utah.gov" <psc@utah.gov>

To Whom it May Concern,

I have been watching the progression of rooftop solar in Utah with great interest. My husband and I own a home in West Jordan and have considered adding solar when we are financially able to do so. The news that PacifiCorp has decided to change the rate structure for rooftop solar customers makes us very uneasy. As it is proposed, no homeowner will be able to recoup the cost of their solar panels in lower energy costs. This is completely unacceptable to us.

As customers and citizens, we recognize Rocky Mountain Power's need to keep and improve the power grid. But the rate structure change looks much more like a bid to make money on the backs of customers. It unfairly penalizes citizens who choose to use clean power. We would be better served with the existing rate structure, which provides clean power to the grid.

I suffer from asthma and also have worked in schools where many of my students also suffer. They were required to stay indoors during bad air days, but how can a child stay indoors when they must walk to and from school? The air is causing health problems for the most vulnerable people in our society and anything we can do to mitigate that damage should be a high priority. I do not want to see more children sent to the ER for breathing-related issues exacerbated by poor air quality. Rooftop solar may not completely solve that problem, but it's so much better than the alternative.

Please consider the need for more green options when looking at Rocky Mountain Power's proposal and err on the side of the people. Surely there is a way for RMP to maintain our grid without unfairly penalizing solar users. Please keep Rocky Mountain Power's proposal from taking effect.

Thank you for the opportunity to speak to this issue. It means so much to me, both as a health issue for myself and for my children and the children I have worked with over the years.

Sincerely,

Julianne (and Michael) Paul

Dear Commissioners,

I am writing today to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. Whatever you can do to help suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I feel like Rocky Mountain Power has a unique situation where they are the only power provider and they are trying to discourage the growth of solar energy in fear that the technology will replace or offset the power grid almost entirely.

My friends at Intermountain Wind & Solar have generously donated a solar system to a 501(c)(3) in which I am a board member. I don't know if you've seen the news piece on channel four the other day. Here is the link. <http://www.good4utah.com/news/local-news/intermountain-wind-and-solar-donates-energy-system>

I owe it to them to support their cause and reach out to you as a friend in an effort to help support Intermountain Wind and Solar and other growing Utah solar power companies.

Thank you for accepting public input. Please reject the request submitted by Rocky Mountain Power to charge customers different rates based on the measures they have put in place to save money on energy costs.

Respectfully,

Lance Hori, CPA

Brady Schimpf <brady_ls@icloud.com>

Tue, Nov 22, 2016 at 8:30 PM

To: psc@utah.gov

Dear Commissioners,

I believe in the free market. I believe in clean air and an environmentally sustainable existence. I believe that I, and all people, have the right to life, liberty and the pursuit of happiness. I believe it is incumbent upon government officials to defend those rights, protect the environment, our air and our free markets. Because of this, I am opposed to PacifiCorp-Rocky Mountain Power's Advice No. 16-13.

Free Market

Generally speaking, monopolies are illegal in this country . As is the case many utility companies, Rocky Mountain Power is allowed to function as regulated pseudo-monopoly . Within the Rocky Mountain Power grid, consumers are not able to benefit from the free market, which Econ 101 tells us provides consumers with a better product at a lower cost.

Distributed PV Solar solves this problem. With the fairly recent advent of economically viable PV , homeowners suddenly can reap the benefits of the free market. They now can choose their power provider , and those providers can compete for their business. Electricity customers can now get a better product (clean electricity) at a lower price.

RMP has made the argument that net-metering unfairly shifts costs from solar customers to non solar customers, this is absolutely false. Many studies, by a broad range of institutions across the country have shown that net metering is actually a net benefit to the grid, utilities and non-solar rate payers. The Brookings institution recently published an article detailing these studies and concluded,

The economic benefits of net metering actually outweigh the costs and impose no significant cost increase for non-solar customers. Far from a net cost, net metering is in most cases a net benefit—for the utility and for non-solar rate-payers.

This article also cited a Nevada study which found that as of 2014, the solar installed in the state provided a net *benefit* of \$36 million to *all* NV Energy customers. Please take a few moments to read this [article](#) which succinctly compiles dozens of studies into a few pages.

Lastly, think of the Costco analogy . Rocky Mountain Power's proposal is like Costco saying, "We know you are paying your annual membership fee (charges that all grid connected customers pay regardless of usage) for access to our store (power grid), but because you are buying some of your groceries (electricity) elsewhere, you are spending less monthly at our store than the average customer , so we are going to increase your annual fee."

PacifiCorp-Rocky Mountain Power's Advice No. 16-13 is anti-free market, and increases the financial burden on the citizens of the state of Utah.

Air & Environment

Utah, is ranked as one of the worst states for air quality in the nation. I'm sure you have read the studies. Poor air quality is linked to all kinds of health issues, asthma, lung disease, heart disease, early death etc. As stated in this [article](#) the bad air here is literally killing people. When air quality was really bad earlier this year ,

hospitals and urgent cares saw a 30% spike in patients! [link](#)

The Utah Division of Air Quality [2015 Annual Report](#) shows that Salt Lake and Utah Counties are so bad that they are classified as "Nonattainment Areas" by the EPA. It also shows that "point sources", which includes power plants are major contributors to the problem.

While there are many factors at play here, clean energy could have a massive impact on the air quality in the state. Distributed PV Solar, which costs *nothing* to the taxpayers of the State of Utah, could have a great impact.

PacifiCorp-Rocky Mountain Power's Advice No. 16-13 is anti-clean air, and will damage the health of the citizens of the state of Utah.

The Right to Life and the Pursuit of Happiness

I am fairly new to the State of Utah. I moved here with my job, about 2 years ago. I purchased a home, bought a car, met the love of my life, got married and put down roots. I planned to live here for a long time and enjoy all that the state has to offer. The beautiful mountains, clean cities, great roads, generally well run government, wonderful people, low crime rate, low cost of living, booming economy etc, but the bad air here has had such a negative effect on my health, that I am being forced to re-think that plan.

I grew up in the Pacific Northwest, only a few miles inland and enjoyed clean air. Shortly after my move to Utah, my respiratory health problems began. After 25+ years of no issues, I developed asthma. I began to regularly catch respiratory infections. Earlier this year, when the air was particularly bad, I caught a minor cold, partially recovered, then got another cold, which developed into an upper respiratory infection. That combined with my asthma made breathing so difficult that I had to go on a combination of steroidal anti-inflammatories, anti-histamines, and an Albuterol inhaler.

Towards the end of this bout, I thought I was doing a little better and could get some exercise. That was not a good idea. Despite having dosed up before starting, I had an asthma attack and had to take another dose of Albuterol. Except, I couldn't breathe deeply enough to get it into my lungs. Multiple puffs later, I could breathe again.

I have always been for smaller government, less regulation and lower taxes, but as I sat there in my car, shaking from all of the meds I had to take to keep my airway open, just to simply breathe, I realized that the push for clean air and a clean environment is not about bigger government, or more regulation. It is so much bigger than that. It is about our government officials defending our right to life, to breathe- our rights to Life, Liberty and the Pursuit of Happiness.

And here is the best part- PV Solar & net metering are part of the solution to all these problems. PV Solar provides access to the free market, reduces rates and provides a net economic benefit to *all* electricity consumers. Solar produces zero emission electricity, which helps reduce air pollution without the government spending a dime. Most importantly, by supporting clean air, solar protects the inalienable rights of all people to Life and the Pursuit of Happiness. Really, PV Solar net metering is a no-brainer and a win win for all.

So, why is RMP so bent on killing distributed PV solar? while I have my guesses, one thing is certain- they do not have the best interest of Utahans in mind.

Sincerely,

Brady Schimpf

Dear Commissioners,

I live in South Jordan and recently had solar panels installed in hopes of saving some money on costs for electricity and to help reduce certain emissions into the atmosphere. This comes to you to request that PSC require that more time be allotted for discussion with Rocky Mountain Power before consideration is given for approval of RMP's proposed rate increase for all customers who use solar as a component of their respective electrical power needs. From my perspective, it is apparent that RMP "arranged" this short period for public discussion in order that it would give RMP an advantage that cannot be justified. I trust that you will deny this rate increase request from RMP and instruct them that subsequent rate increase request(s) must allow a reasonable and fair amount of time for public discussion for this group (solar) of customers.

Thank you for allowing me to offer my comments on this most unfair rate request presented by Rocky Mountain Power.

Jon Jensen <jon5jensen@icloud.com>

Tue, Nov 22, 2016 at 8:49 PM

To: psc@utah.gov

This is a very sad day.
I object to Advice No. 16-13

Solar is but a consumer choice, and has provided thousands of jobs for Utahans and give us, the consumers, an option to our power. Normally, if you live in a specific area, you have NO CHOICE, but you have to use RMP and are at their dictates... this is called a MONOPOLY. Name me one other product in your life that this happens.. that's like saying 'because you live in west Valley, you have to buy a honda'... that sounds sadistic and communistic.

Also, having been born and raised in Utah, the air quality is horrific and isn't getting better... solar is a way to try and scientifically prove that it's helping out beautiful state.

Also, solar generally saved consumers money on their electric bills, which will only be put BACK into the Utah economy to continue to boost consumer spending.

So the 4 main pain points solar has fix:

1. Thousands of Utah jobs. This is great for everyone.
2. Cleaner air. Everyone wants to breath cleaner air.
3. Consumer choice! We are a democratic republic with a free market system that demands choice. If this passes it is a poor show of favoritism and communism.
4. More money into utahs economy. This helps our state.

So, in summary, if I asked you these yes or no questions, how would you respond?

Are you in support of thousands of Utah jobs with that number continuing to increase?

Are you in support of cleaner air?

Are you in support of free enterprise and consumer choice?

Are you in support or stimulation and more consumer spending into Utah's economy?

If you answers Yes, to these 4 questions, then we must not allow RMP to pass this. Solar is the answer to all of these.

Your respectfully,
A very concerned Utahan,

Jon Jensen

Steve Jolley <mysolarconsultant@gmail.com>

Tue, Nov 22, 2016 at 8:50 PM

To: psc@utah.gov

Dear Commissioners,

I am opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

The information Rocky Mountain Power has provided by their study is not valid because it is not an independent study. This study needs to be audited by an independent qualified source. RMP has not included important information on all the good that rooftop solar provides. Primarily, rooftop solar provides power during peak energy times where RMP can sell the excess power generated by solar for much more money than they are crediting the rooftop solar customers. During demand times for large needs of power, rooftop solar provides many MegaWatts of power. It's quite sad if the public service commission that has public trust and put in place to keep RMP from becoming an entity like a monopoly become a monopoly. RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy primarily because the State of Utah has goals to implement solar. If RMP is allowed to charge rooftop solar customers, this will negatively affect all future solar customers and thousands of jobs. I have studied solar photovoltaics for over 6 years now and have read articles and studies from other regions where experts have found rooftop solar to have value to the power system and grid. The costs to maintain the grid balance out. I have also heard lies coming from Rocky Mountain Power's employees telling people with solar and people without solar that "solar is dirty power". This statement is completely false. The pure sign-wage coming from a dc inverter is the cleanest power you can achieve.

I wish to sincerely thank each of you serving on the Public Service Commission for accepting public input, though the deadline should be extended. I respectfully request the Public Service Commission, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Sincerely,

Steven R. Jolley

Ryan Hecker <rhecker@live.com>
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 8:54 PM

Dear Commissioners,

We would like to expressly state our opposition to PacifiCorp/Rocky Mountain Power's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, we urge the Commission suspend the tariff and not let it take effect December 9th, 2016 as proposed by RMP and that the normal rate-making process be followed for the proposed changes.

We feel RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers within such a jaw-droppingly short time for comment, restrict free trade, and limit access to clean & efficient energy. We find it very ironic that a monopoly with all the protections of the State and the freedom from competition only a monopoly can enjoy can choose to crush any other valid options for energy in a state which presumes to place free-market capitalism in high regard. Many other states and utilities have found that rooftop solar add great value to the power system and grid. Rocky Mountain Power has chosen to ignore the wishes of many segments of it's customer base and has been substantially behind the rest of the market in providing clean, green, renewable, non-polluting energy choices. Rocky Mountain Power continues to believe in the proposition that they can continue to force the "unseen" and unrealized but very real costs of dirty coal-fired power onto an unwitting public.

We would like to thank the Commission for accepting public input but strongly feel that the deadline for public comment should be extended. We request the Commission represent our expressed interests and the interests of all ratepayers and the Utah public by rejecting PacifiCorp-RMP's current rate change request.

Respectfully

Ryan & Deanna Hecker

Larry Bond <ldbond32@gmail.com>

Tue, Nov 22, 2016 at 8:57 PM

To: psc@utah.gov

Dear Commissioners,

My name is Larry Bond and I live in Farmington, UT. I am a recent retiree who purchased a modest 1500 square-foot home for my wife and myself and our adult disabled son. One of our goals in retirement was to become as independent as possible from rising costs of living so we installed solar panels and paid for them with a portion of our retirement savings. I believe that with the size of our home and with our solar production of electricity we have significantly reduced our carbon imprint on the community.

I am strongly opposed to the proposed PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016 because I believe that it significantly discourages further residential solar development at a time when this technology is beginning to make an impact on energy production in the State of Utah. I fear that even with the proposed "grandfathering" of existing solar systems out of the proposed penalties and fees, I will at some point be included in the new rate schedule and lose my goal of being more energy efficient.

I am certain that the PSC will do the right thing for the people of Utah and not bend to the one-sided proposals of Rocky Mountain Power and PacifiCorp as they attempt to stifle a growing and competitive industry.

Your Fellow Citizen,

Larry Bond

Dear Commissioners,

I'm writing to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I believe that RMP's proposed tariff has not been adequately justified by the company and that its assertions regarding the capital cost structure that it faces currently are not supported by compelling evidence.

RMP should be required to explain the basis on which it makes its assertion that rooftop solar customers are unfairly benefitted if a tariff is not charged. Please look carefully at the reasoning used to justify this tariff and whether the recovery of supposed capital expenditures is truly justified.

Thank you.

Matt Bean

PHIL ROMNEY <philromney@msn.com>

Tue, Nov 22, 2016 at 9:02 PM

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners:

I'm writing to voice my opposition to Rocky Mountain Power's (RMP) recent filing of Advice No. 16-13 to change the rooftop solar rate structure effective next month. My concerns are several, among which are the following:

- The timing and fast track nature of RMP's request are suspect. Important changes such as this should be subject to thorough scrutiny and should allow ample opportunity for public input. Any action that attempts to circumvent the normal rate-making process, as RMP's proposal does, should be soundly rejected by the Commission.
- RMP's proposal fails to adequately consider the many benefits of rooftop solar, among which are: reducing the need to build expensive new generation capacity and transmission infrastructure and reducing the environmental, public health and economic impacts of fossil fuel consumption.
- RMP's proposed rate increase will destabilize the burgeoning solar industry in Utah, resulting in the loss of thousands of jobs and economic loss to the state. In order for homeowners to be willing to make the significant investment in rooftop solar, there needs to be some predictability regarding future rates. I speak from personal experience. I have been investigating an investment in rooftop solar for the last three months and was very close to making the decision to invest when I learned of RMP's proposal. Now I'm seriously reconsidering my decision because I have no confidence in what future power rates will be and, thus, what the payback period will be. I can imagine that many others are having similar reservations.

If approved, RMP's rate increases will effectively eliminate future investments in rooftop solar and significantly harm Utah's rapidly growing solar industry. I respectfully urge the Commission to reject RMP's current rate change request. Thank you for the opportunity to provide input and for considering my request and similar requests of other interested and concerned citizens. Respectfully,

Phil Romney

Scott Golightly <scott_golightly@hotmail.com>

Tue, Nov 22, 2016 at 9:05 PM

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

I am writing to you in opposition to PacifiCorp-RMP's "Advice No. 16-13", filed November 9, 2016. This advice would change the rate structure for rooftop solar customers. I would urge you to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed. Any change of this magnitude should be examined and handled through the normal rate change process and not fast tracked.

I especially feel that this change and the timing was designed to reduce the amount of public discussion to enable the rate change to take effect. If this happens not only will many in the solar industry in Utah lose their jobs it will be harder for those contemplating rooftop solar to be able to pay back the system. While I believe there are costs to Rocky Mountain Power to provide power to customers I am not sure that the proposed rate change effectively addresses that issue. To me it seems punitive and designed to reduce the rate of new rooftop solar installations. While I and other owners of rooftop solar panels have been told that the rate change will only affect now installations there is no guarantee of that. In addition I feel this proposal will negatively effect the resale value of my home if I should ever choose to sell it.

Thank you so much for taking the time to read my comments. If possible you should extend the deadline for comments so more Utahans can respond to the advice from Rocky Mountain Power.

Harold Young <harleymix3360@gmail.com>

Tue, Nov 22, 2016 at 9:07 PM

To: psc@utah.gov

Cc: Creig Paskins <cpaskins@gmail.com>, Blaine Gott <pridemas@msn.com>

Dear Commissioners,

I want to express my opposition to Pacific Corp-RMP's Advice No. 16-13" filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the PSC to deny the utility's fast-track request and require it to use the normal rate-making process for its proposed changes.

The utility continues to ignore rooftop solar's contributions to reducing its peak capacity requirements, which reduces the need for building more power plants and burning more fuel. Rooftop solar means less carbon dioxide and particulate emissions from traditional power plants. Until now, the utility and traditional grid customers have passed the costs of climate change and respiratory illnesses to the general public.

Over 3,000 solar jobs in Utah would be put in jeopardy by RMP's move to halt the growth of non-utility [i.e. rooftop] solar.

It is clear that the utility prefers to concentrate Utah's future solar growth in limited-scale solar programs [e.g. Subscriber Solar] it can control.

That is not in our best interest!

What is in our best interest is CLEAN AIR, and solar can be part of the answer. We are headed into another winter where we have already started to see the inversions and poor air quality along the Wasatch. How much longer are we going to have some of the worst air on the planet.

Your actions on this proposal could be the change we need to improve the air quality in Utah.

Thank you so much for accepting public input, on this very important issue, however I do feel that the deadline should be extended.

I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

To: psc@utah.gov

Dear Public Service Commission,

I have had rooftop solar for less than 2 months. I was assured that Rocky Mtn Power would require \$6 a month...no more...I was told that this amount would not change. So now they want ...\$50 more...on top of what I am paying for my solar service and panels...\$95.00 every month ...this is what I was paying Rocky MTn Power every month. So NOW?...I will be paying \$150 every month!

They would be TOO POWERFUL!!

My husband passed and I am on a limited budget. I am 75 years old...I thought I was being responsible ..helping Utah.. Helping me...

I oppose the recent proposal ...Docket #16-035.....T14 Public comment....that would change the rate structure...they are a monopoly...no fair to me and other Utahans who care about becoming more self sufficient ! Please reject Advice no 16-13.

Thank you for listening and caring.

Tue, Nov 22, 2016 at 9:10 PM

To: psc@utah.gov

Present Commissioners,

At a time when we all are trying to help the environment and trying to achieve more benefit to families; this proposal by the power company is not favorable, realistic for families nor for the future of our environment. I urge you to reject the proposal put forth by PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016.

Please keep us in mind and reject this proposal as bad for Utah, Utah families and Utah business. Please ensure that the activities of our utilities keep a service oriented outlook on the citizens of our state. I don't believe that the timing of this movement by Pacific Corp during the Thanksgiving holiday to be friendly to us as customers or to you as those who watch over the interests of the families of Utah.

Thank you for the service you render as our representation on issues pertinent to Utah families. I ask that you reject completely PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016.

Sincerely,

Kenneth North

Kali Ehinger <kehinger@apexsolarsolutions.com>

Tue, Nov 22, 2016 at 9:14 PM

To: psc@utah.gov

Dear Commissioners,

I STRONGLY oppose Pacific-RMP's "Advice No. 16-13" filed Nov. 9, 2016. Me, my family, and friends all urge the Public Service Commission to suspend the tariff and not let it take effect December 9th.

We should all continue to have the right to choose how we want to supply power to our own homes. This is unconstitutional and restricts free trade.

I don't understand how we as a state can limit access to clean and efficient energy. The solar industry is providing such an economic boom in Utah and many other places. It's hard to even understand how this proposal is legal. We need to suspend this tariff and continue to try to better our environment and fight for our rights!

The use of renewable energy, in particular rooftop solar, is a win, win for everyone. From the economic jump it's providing residential customers and business'. To the power companies being able to more efficiently and effectively keep up with demand charges. Lastly, to reducing our carbon footprint which Utah so desperately needs.

Lets cause change here. Lets join and support this industry and recommend for others to follow. Our future generations need this and depend on us to demand change is taken!

There are many creditable articles and countless studies from other regions where it has been proven that rooftop solar has a significant value to the power system and the grid. In conclusion, I oppose the Pacific-RMP's "Advice No. 16-13".

Thank you very much for accepting public input. Please keep in mind the interests of the ratepayers and the general public. Please reject PacifiCorp-RMP's current rate change request. If we do not come to a better agreement then we are effectively killing the entire industry and we will regret that decision.

PacifiCorp--RMP's "Advice No. 16-13" filed Nov . 9, 2016

1 message

Brian Sellers <sellersksm@hotmail.com>

Tue, Nov 22, 2016 at 9:19 PM

To: "psc@utah.gov" <psc@utah.gov>

We are writing in strong opposition to PacifiCorp--RMP's "Advice No. 16-13," filed Nov 9, 2016. We are existing customers of PacifiCorp--RMP who have a great interest in solar power and are considering the installation of solar power panels for our personal electrical supply. We are doing this for two reasons: First, we live in Salt Lake County and we have great difficulties every winter from the inversions that trap the bad air in our county. We hope that the people of our county and state will have the foresight to clean up Utah's dirty air and reduce our carbon footprint. This is important for the health and wealth of all of us who live in this area. Second, we believe that ultimately solar power will be less expensive than the existing procedure of generating electricity.

Obviously Advice No 16-13 would make it financially unfeasible for us to proceed with the installation of solar panels. It is vastly unfair for a utility monopoly to make it financially impossible for individual citizens to proceed with the installation of solar power for their individual use.

It would be a huge disservice to us and all citizens of the state of Utah to shut down residential solar power. We believe that PacifiCorp--RMP also understands that energy in the future will need to be generated by solar power and by other environmentally friendly methods. However, we also think that they are very concerned about maintaining their monopoly as the sole provider and producer of electricity. Thus we see their actions in this Advice No. 16-13 as one effort to maintain their monopoly and to shut down residential solar power in Utah.

We believe that in the future residences and business will harness cleaning energy from the sun, store it in batteries, and be entirely off the grid. This scenario is becoming more of a reality and Advice No. 16-13 is a desperate effort by PacifiCorp to keep their monopoly on the production of energy and to stop progress and end consumer choice and control.

It would be our hope that the Public Service Commission would keep in mind that they represent the people and not the huge monopoly of PacifiCorp. We understand PacifiCorp--RMP made an effort in the 2016 Utah legislative session to substantially reduce the installation of residential solar power. We see this Advice No. 16-13 as a continuation of that attempt. We are aware that the utility lobbyists have great influence with the Legislature.

We need the Public Service Commission to represent us the citizens of Utah and help us maintain our financial ability to install personal solar power panels.

Thank you for your consideration.

Dear Commissioners,

I am writing to voice my opposition to PacifiCorp-RMP's advice no. 16-13, filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge you to suspend the tariff and not let it take effect on December 9, 2016 as RMP has proposed and require them to use the normal rate-making process for its proposed changes.

As a consumers in Utah, my husband and I are trying to help clean up our air , save money, and find energy sources that we can sustain through our life time. We have made a large investment in putting solar panels on our rooftop and need the lower electricity bills to help offset those costs. Where we are willing to put our own moneys into the project I don't feel it is reasonable for RMP to penalize us for our investment that will benefit them in the long term as it has in other states. Please do not allow RMP to limit fair trade and limit our access to clean and efficient energy.

I'd like to thank the commission for accepting public input on this matter . Renewable solar energy is vital to our nation and state. Please reject the PacifiCorp-RMP's current rate change request.

Sincerely,

Reply-To: Howard Quackenbush <howardquackenbush@yahoo.com>

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

I am writing to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed November 9, 2016, that would change the rate structure for rooftop solar customers. Rocky Mountain power has a history of making it very difficult for any groups or individuals to compete with energy production in Utah. It now appears that they are aggressively trying to attack private citizens and small businesses that are trying to use solar energy to offset their costs. I am also asking the commission to suspend the tariff and not let it take effect on December 9, 2016 as Rocky Mountain power has proposed and I urge you to have Rocky Mountain power use the normal rate making process for its proposed changes.

I have dealt with Rocky Mountain power several times over the past few years as a private person and as a business owner in Millard County. Any new construction is required to pay significant connection charges, reimburse Rocky Mountain power for the transformers, and are subject to rate increases frequently. I recently installed a solar system to help fund a professional building that I own to offset the cost of 3 businesses in that building. Not only is Rocky Mountain power proposing these new fee structures they are also proposing monthly fees to be allowed to connect with a net meter. **This seems very unfair and unethical since Rocky Mountain Power will take all the excess power that my system will generate and does not reimburse me for the excess. They take free power from my system to supply their network and then try to charge me extra fees because I am using a solar system.**

I am aware that they have a very powerful lobbying group in Utah but I feel you as a commission will be able to protect your constituents and individuals from this financial overreach.

Thank you for allowing me to give my input regarding this situation. I trust that you will keep the people of Utah in mind as you consider PacifiCorp-RMP's rate and tariff requests. I hope that you will reject these and have them go through the proper process.

Sincerely,

Dear Commissioners,

I am in the process of getting rooftop solar panels for my residence. We need to have the use of clear energy to save the environment. With the cost of solar panels and the increase in the rate structure will prevent future home owners from trying to do the part in providing a better future for our children. There will always be a need for power and with the increase in population and electricity consumption; rooftop solar is a method that will decrease the continual need for a power source (coal plants). RMP made solar farms to provide that option for its customers at a cheaper rate, but on the other hand this rate increase is hurting the residences that have already added solar. It would be cheaper for people to get solar power from RMP as opposed to getting electricity from their rooftop solar. On top of that it would wipe out the solar panel industry in Utah. I understand the need for infrastructure to collect the power but when solar customers are over producing, they are feeding power into the grid. I believe this is more a profit move as opposed to a need for RMP to service everybody. I also believe this big push to pass right before Thanksgiving is deceiving. They are mixing it in with the holidays to decrease public interest/comments. This statement is in regards to: PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I particularly urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I chose to go solar to help the environment for my kids and future grandkids. I am trying to do my part to help out the world. I also thought that during the summer time that I will decrease the demand/draw on the grid because I will be producing my own power. This is a profit move by RMP and I strongly oppose this.

Thank you for accepting public input in this matter, though the deadline should be extended. Respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp RMP's current rate change request.

To: psc@utah.gov

Dear Commissioners,

I strongly opposed to PacifiCorp-RMP's Advise No. 16-13, filed November 9, 2016, which would change the rate structure for rooftop solar customers. We urge the Public Service Commission to suspend the tariff and not let it go into effect December 9th as proposed by RMP. This proposal has been raised with an unreasonably short notice so that the people would not have time to learn of what was happening nor have the time to respond as needed.

As a family in Sandy, Utah, we contracted with Legend Solar, October 2015, in what we thought was a long term benefit for all parties concerned. It was being promoted by the State, and the State was willing to provide incentives to families to have clean power that would supplement the coal and hydro power. We went into debt for the next 15 to 20 years, in order to become self sufficient, thinking solar power would be a wise long term choice, even though we are paying much more per month than previously. In implementing such increases RMP would essentially become a monopoly and restrict free trade at the same time limiting access to clean and efficient energy. Additionally, studies have shown that in other regions that there is great value in having rooftop solar to supplement the local power systems and grid. As in Las Vegas, we believe, that solar companies for the most part would not survive and would leave current customers without the warranty and service needed for the long term. There is also a strong possibility that an undue hardship would occur in increasing the costs by not grandfathering in the current customers who have made large financial commitments to pay for expensive panels.

Thank you for your consideration and understanding in this matter. We respectfully request that the PSC, in the interest of the ratepayers and the Utah public, that you reject the PacifiCorp-RMP's current rate change request.

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power , "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution. Rocky Mountain Power is not promoting benefits for their customers, our communities, our families, or our futures .

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Kaytlin Landers

To: psc@utah.gov

Dear Commissioners,

I am opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

Why is there such a short public comment period when the change in rate structure will have such a large effect on solar customers? No fair! My family counted on a 10-14 year payback period. Allow other families to have the same.

I also object to the restriction on fair trade, as well as the discouraging effect on access to clean and efficient energy. The jobs provided through the solar industry are valuable to our state. It only makes sense to support solar power in a state like ours that is blessed with more than 250 sunny days a year.

Thank you for accepting public input. Please extend the deadline to allow others who may be traveling or otherwise occupied during this holiday week. Please reject PacificCorp-Rocky Mountain Power's current rate change request.

Sincerely,

Patricia and Glen Trostle

D. Bret Smith <dbretsmith@gmail.com>

Tue, Nov 22, 2016 at 9:43 PM

To: psc@utah.gov

Dear Commissioners,

I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I and all my family and neighbors urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I have a right to choose how I supply power to my home. This is unconstitutional and restricts free trade. Why would you or how can we as a state limit access to clean and ef ficient energy. This would unreasonably raise the costs for new rooftop solar customers as well. The solar industry is providing so much of an economic boom in Utah that to not suspend the proposal, therefore efectively killing the industry, is going to cause hardship for so many people and business'.

The use of renewable energy, in paticular rooftop solar, is a win, win, win for everyone. From the economic boom it provides to residential customers and business', to the power company being able to more efficiently and more effectively keep up with demand charges, and lastly reducing our carbon footprint which Utah so desperately needs. Lets cause change here. Lets be at the forefront of this industry for others to follow. Our future generations need this and depend on us to put our foot down and demand a better place for them then what we are currently leaving behind. I have read many articles and seen countless studies from other regions where it has been proven that rooftop solar has significant value to the power system and the grid.

Thank you very much for accepting public input. Please keep in mind the interests of the ratepayers and the general public. Please reject PacifiCorp-RMP's current rate change request. Or suspend it until we can find a more reasonable agreement. If we do not then we again are efectivly killing the entire industry and we will regret that decision.

Dear Commissioners,

As a concerned citizen of Utah, I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

For reasons that seem to be obvious to us as residents of Utah, these actions of Rocky Mountain Power should not be allowed. They simply should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. These changes proposed by Rocky Mountain Power not only affect me, but every other individual within the state who currently breathes the unclean air we experience within the state.

Various articles support that the use of solar helps to reduce the need for other less clean forms of energy generation. I would personally like to thank the Commissioners for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Dear Commissioners,

I am opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

The key reasons why: I feel RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. I live in a home using solar and this would limit future developments which would improve my system. There are many changes about to be made public which would suffer restricted use if PacificCorp-RMP could control users. There is enough slowdown in the industry as it is without additional restriction through regulations from affected entities.

I thank the Commissioners for accepting public input; though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Dear Commissioners,

I **strongly oppose** PacifiCorp-RMP's "Advice No. 16-13" filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes. What RMP wants to do is unacceptable. If approved, RMP's rate increase will effectively eliminate future investments in rooftop solar and significantly harm Utah's rapidly growing solar industry and eliminate consumer choice in energy production.

Our Great State of Utah is funding higher education campuses such as Applied Technical Colleges and Community Colleges to train people for the Solar Industry. This rate increase is the most anti-solar and anti-business rate proposal to date across the nation. If accepted, it very well could destroy the solar industry overnight and be very detrimental to the people of our GREAT State of Utah.

RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. I am in the commercial building construction industry and have observed many customers who want to do the right thing for our environment by using alternative energy only to find out that it is cost prohibitive for their companies due to the time for payback on their investment. Because of this experience in business I delayed purchasing solar panels for my home also, until recently. My wife and I recently decided to do the right thing for our environment and buy panels even though the payback was longer than we preferred. With the new RMP rate hikes it will take significantly longer for the payback and makes very little financial sense for us by taking two to three times longer. It is not right for a government regulated monopoly type company to take advantage like this.

Thank you for accepting public input, although the deadline should be extended. I appreciate what you do to protect us from monopoly's overreach. I respectfully request the Public Service Commission, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Respectfully submitted,

Jim Allison

Tue, Nov 22, 2016 at 10:06 PM

Dear Commissioners,

As a concerned citizen I am writing to express my opposition to the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers.

There are multiple reasons for my concern. First, this proposal will allow Rocky Mountain Power to charge **an unfair rate increase** to people using rooftop solar (It is obvious this proposal was designed so Rocky Mountain Power can monopolize the power industry in Utah) Second, **solar energy is clean and sustainable**. Something we desperately need in Utah considering our air quality in the Salt Lake Valley was ranked as one of the poorest in the country. Third, **if accepted, this proposal will have a negative impact on our economy**. (The solar industry has employed thousands of people in Utah. However, just like Nevada, if we do not protect the consumer then we will not have a market for it and jobs will be lost and companies might decide to relocate to a state that is more solar friendly)

Based on these factors, I cast my vote to protect the consumer, create a better living environment and promote a vibrant economy that welcomes sustainable energy alternatives for our great state. I respectfully request the Public Service Commission do the same by suspending the tariff and prevent it from taking effect on December 9. If you are going to protect the consumer and our economy, then Rocky Mountain Power should be required to use the normal rate-making process.

Please know I appreciate and value your willingness to accept public input on this critical issue. I respectfully request you preserve the interest of the people, environment and Utah's economy and reject Advice No. 16-13.

Sincerely,

Charles Machinski

Tracie <tracieb@digis.net>

Tue, Nov 22, 2016 at 10:06 PM

To: psc@utah.gov

Dear Commissioners,

I strongly oppose PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. Please suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

The cost increase proposal would kill the solar industry in Utah. Because most of us are not wealthy, we would not be able to afford clean energy. We are at the mercy of Rocky Mountain Power, it appears they can do whatever they want and no one can or will stop them. In the last few months we purchased 6 solar panels to help offset some of our power usage and to do our part to help save the planet. 6 panels are all we could afford, but figured it is better than none. I don't believe for a minute that we will be grandfathered into the old rate system for long, and if we are required to pay the new rates, our power bills will most likely be much higher than before we purchased the panels. We are nearing retirement age, and will have to put off retirement if that happens. This change affects real people, and Rocky Mountain Power needs to be stopped.

Thank you for accepting public input, though the deadline should be extended. Please, in the interests of ratepayers and the Utah public, reject PacifiCorp-RMP's current rate change request.

To: psc@utah.gov

Dear Commissioners,

As a concerned citizen of Utah, I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

For reasons that seem to be obvious to us as residents of Utah, these actions of Rocky Mountain Power should not be allowed. They simply should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. These changes proposed by Rocky Mountain Power not only affect me, but every other individual within the state who currently breaths the unclean air we experience within the state.

Various articles support that the use of solar helps to reduce the need for other less clean forms of energy generation. I would personally like to thank the Commissioners for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Sincerely,

Michael Windley

I'd like to oppose Rocky Mountain Power's proposal to hike rates on net-metering for solar customers. Solar is the future of sustainable energy in our community. With Utah's terrible air quality, we desperately need alternate energy sources, and this would be a dangerous step backwards.

Sincerely,
Nicole Sumner

Dear Commissioners,

I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I and all my family and neighbors urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I have a right to choose how I supply power to my home. This is unconstitutional and restricts free trade. Why would you or how can we as a state limit access to clean and efficient energy. This would unreasonably raise the costs for new rooftop solar customers as well. The solar industry is providing so much of an economic boom in Utah that to not suspend the proposal, therefore effectively killing the industry, is going to cause hardship for so many people and business'.

The use of renewable energy, in particular rooftop solar, is a win, win, win for everyone. From the economic boom it provides to residential customers and business', to the power company being able to more efficiently and more effectively keep up with demand charges, and lastly reducing our carbon footprint which Utah so desperately needs.

Lets cause change here. Lets be at the forefront of this industry for others to follow. Our future generations need this and depend on us to put our foot down and demand a better place for them then what we are currently leaving behind. I have read many articles and seen countless studies from other regions where it has been proven that rooftop solar has significant value to the power system and the grid.

Thank you very much for accepting public input. Please keep in mind the interests of the ratepayers and the general public. Please reject PacifiCorp-RMP's current rate change request. Or suspend it until we can find a more reasonable agreement. If we do not then we again are effectively killing the entire industry and we will regret that decision.

Dave Roseburg <dave@rjtechnicalservices.com>

Tue, Nov 22, 2016 at 10:20 PM

To: PSC@utah.gov

I am requesting to stop Rocky Mountain Power's rate hike proposal associated with solar residential customers. Our company installs residential solar systems all over Utah. My job is to provide all the solar materials for my companys install crews and electricians. We only buy our solar materials from Utah distributors like...Codale Electric, W esco Dist, Platt Electric, CED, Border States Electric, EWS, Royal Wholesale, Home Depot (Layton) and more. Each time I order a bill of materials for a solar job (solar panels, inverters, optimizers) I realize this is only a good thing for Utah. These solar systems provide our customer with zero emission clean electricity to run their homes on. These solar installs are keeping our UT air clean and are the responsible thing to do as humans living on this planet.

No other source of electricity is as clean as the power generated by the sun.

Myself, co-workers and all the local businesses we utilize to build these systems relies on this rate hike proposal not getting approved. I think it is great that we are contributing to a cleaner planet.

David Roseburg

Dear Commissioners,

It is REALLY hard to believe that Rocky Mountain Power is trying to abuse the established procedure for making a proposed rate increase. What they are trying to do is so similar to what happened in Nevada that its scary. This is such an over reach of government entities. Why the rush? Why not more time for community input? WHO IS IT BENEFIT BY SUCH A RIDICULOUSLY SHORT TIME FOR PUBLIC INPUT!!!!!! You guessed it, Rocky Mountain Power. If this is such an important issue then wouldn't stepping back and taking a good look from all angles? Don't you find it interesting that the minute the public chooses to make a decision that is best for the environment and are willing to personally fund it at a 10-12 year hit to recoup their money, that a power company want to put tariffs on it to their benefit. This is soooooo.....wrong in so many ways. Oh, by the way I need to include that this was proposed on November 9th as "Advice no.16-13" by PacifiCorp RMP's with a deadline for public comment on November 22. Then they want to put this into effect on December 9th. Doesn't that seem to the commissioners to have a ridiculously short time line? ARE YOU KIDDING ME! This is wrong on so many levels. Please deny this request and at the least allow more time for public input. I love my solar and really hate the fact that an entity such as Rocky Mountain Power ever has the possibility to making it financially prohibitive for other in our state to be able to use their freedom of choose to enjoy solar if they so desire. It appears to me that RMP got caught with their pants down and now are seeing their lack of being proactive costing them. So now their try to use the system to bail themselves out. Please don't let them get away with this. Vote against the proposed tariff or at least extend the time and opportunity for public comment. Thank you for listening to me. Fee free to call at [801-360-1174](tel:801-360-1174) or e-mail me at rwilke_icefisherman@yahoo.com

- Dear Commissioners:
-
- I am firmly opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge you to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed. RMP need to be required to use the normal rate-making process for its proposed changes.
-
- The key reasons why I feel RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers is that this is bad for private enterprise, it restricts free trade, and limits consumer access to clean & efficient energy. Personally I haven't purchased solar panels yet but am investigating doing so, but such changes would be an obstacle in my decision. Many articles and studies from other regions have found rooftop solar to have value to the power system and grid, and this makes sense both economically as well as environmentally.
-
- Thank you for accepting public input. Please consider extending the deadline so that the holiday week is not detrimental. Again, I respectfully request that you, the PSC, in the interests of ratepayers and the Utah public, reject PacifiCorp-RMP's current rate change request.

Dear Commissioners,

I purchased a grid-tied solar system about 2 years ago and I oppose PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power (RMP) has proposed and require RMP to use the normal rate-making process for its proposed changes.

RMP is unreasonably raising the costs for solar customers! I feel that either they are using a bait & switch tactic if they were to change things now because they said rooftop solar would be a win for them and a win for their solar customers and now they want to change things now that they have us hooked in by having purchased a system. If this was not their intent and their motives are only economic then whoever developed the initial plan and did the research should be held responsible for the errors in their projections.

I have made a large investment based upon the original rates set forth and I don't trust their analysis. If I had known that they were going to change the rates a mere 2 years down the road I would not have purchased a system. Also if they raise the rates now they will effectively kill the solar installation and related businesses/industry that have developed here in Utah because few people will want to invest so much for such a meager return on investment.

The main advantage that I see to my system is that in the hot summer months I generate excess electricity that RMP uses to offset the demand yet they don't have to pay out anything to maintain my system because I own it and maintain it at no cost to them.

I would like to thank the Public Service Commissioners for taking my input, and I would encourage you to consider extending the deadline for comment since many solar system owners are just hearing about this request for rate hike (I just heard about it yesterday).

I respectfully request the PSC, in the interests of ratepayers, and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Thank you,
John Blackham

Gary Walton <grywalton@gmail.com>

Tue, Nov 22, 2016 at 10:32 PM

To: psc@utah.gov

Dear Commissioners:

I understand the PacificCorp-Rocky Mountain Power's Advice No. 16-13, filed Nov 9, 2016, would substantially change the rate structure for rooftop solar customers. I respectfully urge the Public Service Commission to suspend the tariff and not let it take effect on Dec. 9, 2016 as proposed by RMP. Further, it would seem reasonable to require RMP to use the normal rate-making process for its proposed changes.

RMP's proposal, while protecting its own interests, is detrimental to the economy and to the interests of many of Utah's residents and citizens. It unduly protects an industry at the expense of citizens' rights to choose how to power their homes. It would limit access to clean and efficient energy and, if fewer people opt to invest in solar energy because of the rate increases, it would contribute to the further degradation of Utah's air quality. From a personal level, it seems unfair to punish homeowners who are seeking a more environmentally friendly and (in the long run) cheaper alternative for providing energy to their homes. Utahns should have the right and the option to access solar power without the disincentive of monetary penalties from RMP. They should also have the option of accessing ways of reducing their costs for utilities to protect their financial resources. As you are aware, Nevada passed similar rate increases and essentially killed the solar industry there. This seems particularly tragic in a state where solar energy could be used to such great advantage overall.

Thank you allowing public input into this process. I again respectfully urge the Commissioners to protect the interests of Utah's citizens and ratepayers and reject RMP's current rate-change request.

Sincerely,
Gary R. Walton

To: psc@utah.gov

Hello, and to whom it may concern and to who could help us...

we have recently benefited our community our state and local power situation by investing many dollars and time into a new solar system for our home. We have become solar customer enjoying the ability to producer our own power. It concerns us very much that there is what seems to be a monopoly company trying to raise rates and overcome our choice to provide ourselves with clean natural power We would ask very strongly that you consider the time, investment, and future benefit to our family in perpetuity of this investment that we have made in solar power

We would also ask very strongly that you allow people to enjoy the ability to produce power and be self-sufficient on their own in the future. Utah is a state that is in the black. We are amazed at that and feel citizens should be allowed to also maintain their personal providence in the black. Solar power is an option to be able to provide for themselves in the case of emergency with a power source that they have pre-planned, prepared for and paid for by their sweat Blood and Tears.

We would appreciate that you decline the Monopoly companies request to defeat the individual and their desire to be self-sufficient. We would also ask very very strongly that those who have power produced by solar at this time be able to recoup their investment with the contract they have made with the power company for perpetuity. We thank you for your time and consideration in this matter and would remind you that the personal freedoms that we enjoy were based on individuals being able to choose for themselves. This is one of those cases given to us by the Founding Father's and our God to allow us to be the purveyors of our own destiny. Thank you for your time and consideration in this matter , we would hope that you empower yourselves to protect our individual rights and freedoms in this case.

Thank you again,

David Hull

To: psc@utah.gov

Dear Commissioners,

I oppose all Rocky Mountains Power's Advice NO. 16-13 filed November 9th 2016, that would change the rate structure for rooftop solar customers. Please reject the tariff and do not allow it to take effect December 9th as Rocky Mountain Power has proposed. Please require them to use the normal rate making process for it's proposed changes.

Rocky Mountain Power has been allowed to have a monopoly in Utah for years and they do not have the interest of the public at heart with this new rate proposal. They should not be able to restrict free trade and impose outrageous tariffs on rooftop solar customers. If their proposal goes through rooftop solar in Utah will be dead and I will have to relocate to a state that allows free trade and competition. Rocky Mountains proposal is the most anti solar proposal that has ever been brought before a public utility board in any state. They have used skewed data in an attempt to justify killing any resemblance of competition in Utah.

Thank you for accepting public input, although I do believe the time frame for public input should be extended. Rocky Mountain Power has been planning this for months and the window that the public has been able to digest their terrible proposal has been very short. Please reject all aspects of their proposal.

Austin Somers <austinsomers@gmail.com>

Tue, Nov 22, 2016 at 10:40 PM

To: psc@utah.gov

Commissioners:

It's important for me to voice my opposition to Advice No. 16-13 as proposed by PacifiCorp' s Rocky Mountain Power.

I understand the importance energy plays in society , which is why I understand and appreciate energy providers like RMP. However, it is also important to understand the innovation and progress that is of fered by the solar industry . And, while it's not a perfect answer to our energy needs, it is truly progress to the core. In history, we've witnessed disruption innovation. And, most of the time, entrenched legacy companies fight tooth and nail to inhibit the progress. This is understandable. But, it' s not what's best for society.

We, the citizens of Utah, have subsidized RMP's growth and maintenance of the grid. W e have paid them for their service. Now that we have an additional option, RMP is attempting to practically remove that option. This is unacceptable. At the base of the issue is our ability to choose another energy option. Particularly , an option that will help improve our air quality; an option that will lead to innovation and progress. Finally , I believe it's important to support a growing vertical within the Utah economy . Utah is known for being friendly to economic growth and new enterprise. Let' s not change that element which makes Utah a great place to live.

Please reject PacificCorp's current rate change request. W e've all seen where this will lead by looking no further than Nevada, another Berkshire Hathaway territory . Overnight, they destroyed an industry that provided jobs and energy to thousands of citizens - all in the interest of self preservation.

It's time to move forward to energy independence and innovation.

Respectfully,

Austin Somers- Richfield, UT

Tue, Nov 22, 2016 at 10:41 PM

To: psc@utah.gov

Dear Commissioners,

My livelihood as well as tens of thousands of others are also at risk. Rocky Mountain has not evaluated the benefits of customers using their own solar systems. It reduces their overall production costs. The consumers are assuming the liability of their panels and RMP is not. What more could a public service as for? Passing this proposal is 1,000 steps backward. They have been a government protected monopoly because there was no other option. That option is now knocking on our door. If this proposal is accepted that is saying that we do not believe that cleaner , more reliable, and AFFORDABLE, energy is beneficial.

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Please, for the sake of the environment, do not hike the rates on net-metering for solar energy customers! This is THE form of energy that we need to pursue, and making people pay more is discouraging future customers from investing in solar energy. It is crucial that we progress to the use of solar energy to help protect the environment!

Greetings Dear Commissioners,

I would like to let it be known that I am in opposition to Pacific Corp-RMP's "Advice No. 16-13", filed Nov 9, 2016. This would change the rate structure for rooftop solar users. RMP is proposing that this take effect Dec 9th this year I urge you to suspend the tariff and not let it take effect. Please require them to use the normal rate-making process for its proposed changes.

The proposed rate structure would kill the solar industry and thousands of jobs. Jobs that have been earned by providing what the people of Utah want, a choice in how they power their home. I would lose my job and the company that I own if this passes. I understand that RMP may need to charge solar users something but what they are asking for is unjustified and plain abusive. Let's find a fair and equitable solution to this. That is after all your responsibility

Thank you for accepting this public input, but please extend the deadline and please reject the current rate change request for the benefit and fairness of all

Utah home owners.

Justin Munk

2370 W. 5800 N.

Smithfield, Utah

84335

Paragraph #1: State your opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, urge the Public Service Commission to suspend the tariff and not let it take

effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

~ Paragraph #2 (optional): Summarize the key reasons why you feel RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. Consider expressing how such changes would personally impact you. Also, feel free to include that you have read articles and studies from other regions where they have found rooftop solar to have value to the power system and grid.

~ Last paragraph: Thank the Commissioners for accepting public input, though the deadline should be extended. Respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

To: psc@utah.gov

Dear Commissioners,

As a concerned citizen of Utah, I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

For reasons that seem to be obvious to us as residents of Utah, these actions of Rocky Mountain Power should not be allowed. They simply should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. These changes proposed by Rocky Mountain Power not only affect me, but every other individual within the state who currently breathes the unclean air we experience within the state. Various articles support that the use of solar helps to reduce the need for other less clean forms of energy generation.

I would personally like to thank the Commissioners for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Regards,

Casey Winger

Dear Commissioners,

I am extremely apposed to Pacific Corp-RMP's Advice No.13-16 filed on Nov 9th 2016. That would change the rate structure for rooftop solar customer in the state of Utah. I urge the public service commission to suspend the tariff and not let it take effect on Dec. 9th as Rocky Mountain Power has proposed and require Rocky Mountain to use their normal rate process for its proposed changes.

I feel like Rocky Mountain Power should not be able to unreasonably raise rates for new solar customers how are interested in using clean energy and trying to help the environment in the process by going with solar rooftop energy. Rocky mountains proposal limits free trade and consumer choice and if they are allowed to do this 3 tier billing structure it would essentially make solar energy unaffordable for most families and putting most solar companies out of business and making Rocky Mountain more powerful in the process.

Thank you for your time and for reading my email. I feel the deadline for public comments should be extended, if it were i believe you would find hundred if not thousands of people who are very opposed to this proposal from Rocky Mountain Power. I respectfully ask that PSC, in the interest of ratepayers and the Utah population as a whole, to reject Rocky Mountain Power's current rate change request.

Deny Schedule 136 and Its Related Schedule 5 Tariff

1 message

Dan Willems, Sr <danwillems1@gmail.com>

Tue, Nov 22, 2016 at 11:07 PM

To: psc@utah.gov

I oppose this rate change and ask the Public Service Commission to deny Schedule 136 and its related Schedule 5 tariff.

The proposal, if approved, will add uncertainty to solar, reduce the financial return of home solar power systems by over half and also reduce motivation to conserve energy. In 2015, Utah had the nation's 8th largest solar market. There are over 6000 solar homes and 92 solar businesses in the state supporting nearly 3,000 solar jobs.

If approved, this proposal will apply the brakes to this engine of clean energy growth and establish a dark precedent for other utilities in Utah and surrounding areas.

Respectfully,

Dan Willems

Dear Commissioners,

I am writing to state my opposition for PacifiCorp-Rocky Mountain Power's Advice No. 16-13. I believe that the measures proposed will adversely and unfairly change the rate structure in opposition of residential solar customers.

I would like to request that the commission suspend the tariff and prevent RMP's proposal from going live on 12/9. RMP should use their normal rate-making process as the proper channel to propose new tariff schedules.

If the tariff goes into effect, I believe that many individuals that would like to benefit from sustainable renewable solar energy will not longer be in a position to economically justify such an investment.

Thank you again for welcoming our public comments and for your service.

Benjamin W indhorst <bwindhorst@apexsolarsolutions.com>

Tue, Nov 22, 2016 at 11:11 PM

To: psc@utah.gov

I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I and all my family and neighbors urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I have a right to choose how I supply power to my home. This is unconstitutional and restricts free trade. Why would you or how can we as a state limit access to clean and efficient energy. This would unreasonably raise the costs for new rooftop solar customers as well. The solar industry is providing so much of an economic boom in Utah that to not suspend the proposal, therefore effectively killing the industry, is going to cause hardship for so many people and business'.

The use of renewable energy, in particular rooftop solar, is a win, win, win for everyone. From the economic boom it provides to residential customers and business', to the power company being able to more efficiently and more effectively keep up with demand charges, and lastly reducing our carbon footprint which Utah so desperately needs.

Lets cause change here. Lets be at the forefront of this industry for others to follow. Our future generations need this and depend on us to put our foot down and demand a better place for them then what we are currently leaving behind. I have read many articles and seen countless studies from other regions where it has been proven that rooftop solar has significant value to the power system and the grid.

Thank you very much for accepting public input. Please keep in mind the interests of the ratepayers and the general public. Please reject PacifiCorp-RMP's current rate change request. Or suspend it until we can find a more reasonable agreement. If we do not then we again are effectivly killing the entire industry and we will regret that decision

To: PSC@utah.gov

To Whom it May Concern,

My name is Deirdre Murdy and I live in Park City. I know today is the last day to get comments in on the Rocky Mountain Power proposal on solar, and I wanted to make sure you knew how important it was to invest in clean energy. Utah is, in my humble opinion, the most beautiful state in the US. It is rich with amazing natural places for us to enjoy , from camping and mountain biking in the desert to skiing in the Wasatch. We need to make sure we are protecting these natural places for future generations, because I want to be able to share these amazing places with my children someday. Because its natural beauty is such a huge part of what makes our state so incredible, it only makes sense that we should lead the way in moving to a clean energy economy, and investing in renewable resources like solar. Please make the right decision on Rocky Mountain Power's proposal, and keep the rates so people continue to invest in solar and we can help preserve our amazing state.

Thanks,

Deirdre

Rick Gregory <rfg@xmission.com>

Tue, Nov 22, 2016 at 11:18 PM

To: psc@utah.gov

Dear Commissioners,

Please review the reports from the Rocky Mountain Institute on grid-defection (http://www.rmi.org/electricity_grid_defection) and load-defection (http://www.rmi.org/electricity_load_defection).

It would seem to me that Rocky Mountain Power (RMP) is attempting to keep a 19th-century rate structure when the world is moving quickly to a more diverse power infrastructure. Sort of like marking up buggy whips in an attempt to maintain one's profits when there are more attractive transportation alternatives than a horse.

Perhaps what RMP should look at the "Basic Charge - Single Phase" and the "Minimum Charge - Single Phase." Are these really accurate measures of the costs of providing electricity? In fact, should not these be combined into a single line item, since every bill has these?

The notion that grid-tied solar systems cost more to service seems ridiculous. Same wires, same transformer, same poles regardless of whether the home has and does not have a solar system connected.

What an increase in costs for PV system customers will certainly do (as described in the RMI reports) is shorten the time period to make an off-grid residence a cost-effective alternative.

To quote from the RMI grid-defection report [Feb 2014?]: "... utilities must change how they do business or risk losing it" and "... under more aggressive assumptions, off-grid systems prove cheaper than all utility-sold electricity in the region just a decade out from today."

Since our PV system went live, we have sent 6886 KWHr to the grid while using 6291 KWHr from RMP and 4042 KWHr directly from the PV system. We have used more RMP power than PV power! This situation is just calling out for installation of a battery backup system! Isn't that grid-defection?

Thank you for your consideration.

Jacob Anderson <jacob@trasnowandsun.com>

Tue, Nov 22, 2016 at 11:25 PM

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

My name is Jacob Anderson. I am the CFO of TRA Snow & Sun, a solar mounting and racking manufacturer out of American Fork, UT. I apologize for drafting this email late at home from my mobile phone however I just learned that the deadline for public comment is today. I would like to publicly state my personal opposition and our company's opposition to the proposed rate increases in Advice No. 16-13. I urge you to suspend action until further studies have been done. We have personal experience of the damage these measures can take. When The Las Vegas market made similar changes we saw decreases to our revenues of hundreds of thousands of dollars. This not only affected us but also our local supplies such as Futura Industries, SAP A, Ryerson, and many others. Many local dollars and jobs were lost. We fear that these increases will have a very similar effect in this market. The changes proposed could put our solar division out of business and cost local employees their jobs. Not to mention the negative long term effects to air quality carbon emissions and a slow down of the growth of a key renewable energy sector.

We find it difficult to believe that solar power is not offsetting the peak power demands of Rocky Mountain Power when the highest energy spikes occur in the summer on hot days when solar is also at its peak. It is our belief that solar can offset the need for additional power plants that would cost taxpayers and energy customers much more than the current rebate programs implemented.

Thank you very much for accepting input and I encourage you to extend the period for public comment so our other employees, owners, vendors, and customers can also have time to voice their concern on this important decision.

Please reject the rate change request.

Sincerely,

Jacob Anderson

I oppose PacifiCorp-RMP's "Advice No. 16-13," filed Nov 9, 2016.

The idea that Rocky Mountain Power wants to charge people who are switching to solar is outrageous. Our power rates go higher and higher because they do not have any competition because of crap like this. What is next? CenturyLink charging us a fee because we don't have a landline through them? Chevron charging us a fee because we have a hybrid car?

To approve this is asinine. It does not make sense in the slightest. People are tired of paying through the nose to get power. They are looking for alternate means of power. If this passes, you are thumbing your nose at your constituents desire to have a choice. Don't shut down an alternative option to a fee from the giant who thinks they are too big to fail.

Austin Elder <austinellder90@gmail.com>

Tue, Nov 22, 2016 at 11:38 PM

To: psc@utah.gov

To whom it may concern,

I'm writing to voice not only my opinion, but of those in my family as well. I'm sure that Utah has its reasons for wanting to support Rocky Mountain Power in raising the price for solar, but let's think of the bigger picture. We need to encourage solar and make a bigger push toward clean energy. I don't think the best way to do that is charging people more money.

For centuries we've provided power to create amazing opportunities for society but in such a way that has real consequences. We didn't realize it at first but now is the time we really need to shift our habits. It's time to evolve to something better. We are smart enough to think of ways to create that needed power to provide for our communities and lifestyles in a clean way. Let's do everything we can to support that progress. Not have it make a relatively small amount of people, a large profit. I think we can do better than that.

Thank you for listening and your consideration. I am very grateful for the good that you do.

Sincerely,

Austin Elder

Gerald Snow <gtsnow17@gmail.com>

Tue, Nov 22, 2016 at 11:43 PM

To: psc@utah.gov

Dear Commissioners:

I am startled and dismayed that Rocky Mtn Power has made the above rate proposal (Advice No. 16-13, filed only 13 days ago on November 9!), outside of the normal rate making process and with so little time for public comment and to do so at precisely this time, with the comment period ending in Thanksgiving week! It seems so underhanded. At the very least the comment period should be extended.

I just learned of the comment deadline today, so at 11:30 pm, rather than go to bed, I am writing to express my concern that Utah would lead the nation in effectively killing solar power! This proposal to increase the rates on residential solar power users by adopting a punitive rate structure is so lacking in foresight. Alternative energy sources are the wave of the future, especially clean energy, and RMP should ride that wave instead of trying to block it. It makes so much sense to allow, indeed promote, solar power. RMP should be at the forefront of the industry in making it happen and not be fighting it, even if there are costs in the short term. The federal government obviously believes that solar power is worth incentivizing. So does the Utah Legislature with its tax credit. RMP's proposal should be soundly rejected!

I am a recent buyer of solar power, so maybe I would be grandfathered, but it would be selfish of me to think of only myself. Besides, there is a growing industry in Utah of solar power, and that means jobs – jobs that would be lost if this rate increase is allowed. There would be so many negative collateral effects of allowing RMP's rate proposal to go through. There just has not been enough time and thought put into how to manage the short term costs to RMP and who should bear them, and to put the whole burden back on the solar power users is unfair.

Please stand up against this proposed rate increase, in the public interest, in the long term interest of the State, and in the interest of clean and efficient energy! Thanks for considering my comment.

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar custom. I hope the Public Service Commission will suspend the tariff and not let it take effect December 1st as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I feel like Rocky Mountain Power should not be able to raise costs for rooftop solar customers as this would detriment the future of clean and renewable energy in our state. It is sad to see examples of this in Nevada where solar energy is abundant, however the solar panel industry has all but left because of legislation passed that is similar to those Rocky Mountain Power hopes to pass. My family and I have invested considerably in having a rooftop solar installed on our home in the hope to cut down emissions and do what we believe to be good for the environment. We also feel it is very unfair to us and other existing solar customers to have net metering rates changed after we have made the decision to invest large amounts of capital to install a system based on those original rates. I believe that rooftop solar customers not only benefit the environment but also add value to the power system and grid.

Thank you for your attention to this matter and taking the time to accept and consider the input of the public. I feel like the deadline for this input was very quick and falls right before a holiday and therefore should be extended to allow more members of the public to voice their opinions. I truly hope that you would reject PacifiCorp-Rocky Mountain Powers proposed rate change.

Please feel free to contact me for further information or correspondence.

Respectfully,

To: psc@utah.gov

Dear Commissioners,

I strongly oppose "RMP Advice No.16-13" filed Nov 9, 2019, that potentially could change the net-metering rate structure for rooftop solar in the city of North Salt Lake. I urge the commission to to suspend the increased rates proposed and not allow this action to take effect Dec 9th.

The RMP proposal is anti free trade and will completely eliminate a cleaner better way for the citizens of this state the option of producing sustainable solar energy. Without this option the inversion and other pollutants will continue to fill the sky and lessen the quality of life for future generations. We absolutely need cleaner sustainable energy here in our state. This proposal with crush that option. We are proud innovators here in Utah, and promote tech job growth. This proposal will wipe out thousands of tech jobs in the state and bring this booming sector to a screeching halt. This proposal does not represent the home state i have grown to love when i left the California 12 years ago. Please consider the ramifications and impact this proposal will have both environmentally and economically on the good citizens of Utah.

I would like to personally thank the Commissioners for considering and accepting the public input, and urge the Commission to extend the deadline proposed. I would also like to request the the PCS, in the interest of the free market and citizens of Utah, to reject RMP current rate plan adjustments, and SA VE SOLAR in Utah.

I Oskar Wojciechowski resident of 1249 Cinnamon Ridge Circle Provo Utah am against the new proposition by Rocky Mountain Solar to change rates for solar customers. Not only will this already affect those who are participating in solar energy but it will affect those who are wanting to convert. We need to have choices and we can not let a company dictate the path of our state. We need to invest in clean energy as the future of our jobs and health will stem from solar technology .

Jeanette Mohlman <jeanettemohlman@gmail.com>

Tue, Nov 22, 2016 at 11:55 PM

To: psc@utah.gov

Dear Commissioners,

I and my family oppose PacificCorps-RMP's Advice No. 16-13, filed Nov 9, 2016 that would unfairly change the rate structure for rooftop solar customers. I respectfully plead with the commission to suspend the tariff scheduled to take effect December 9, 2016. It is hard to understand why Pacific Corp would request a tariff on solar customers be granted without going through the normal rate setting process. It is troubling to think commissioners would consider approving a proposal for taxation that would unreasonably raise costs for rooftop solar customers, restrict free trade and limit access to clean and efficient energy without going through the normal rate-setting process.

I moved to Utah from a state where the sun shines 360 days a year. But Investor owned power companies had the influence and power to get the public service commission to impose tariffs that made it financially implausible for homeowners to utilize rooftop solar power. We moved to Utah in large part because Utah has one of the most advantageous solar production environments due to the sun, and a pro self-reliance culture and political climate. We put solar panels on our roof as part of our retirement plan to help us survive on a fixed income. Our son put solar on his roof to ensure a source of affordable power in the future for his family. The proposed tariff will be detrimental to me, my family and the rooftop solar community. I have read articles and studies documenting there can be a symbiotic relationship between power corporations and rooftop solar customers. These studies found rooftop solar to be advantageous to the power system and grid. It is the cheapest power the grid will ever acquire.

Pacific Corp is a monopoly, it has no competition. Pacific Corp is the only gorilla in the room. It has an army of high paid attorneys and lobbyists that give Pacific Corp a marked advantage over consumers. Consumers can not "pay to play". We depend on the Public Service Commission to protect us and make sure there are processes to help control rates for the public good. This proposed increase is the most anti-solar and anti-business rate proposal I have seen to date across the nation. If accepted by the commission, it very well could destroy the solar industry and make rooftop solar financially implausible for consumers. That is what Pacific Corp is hoping for, keeping their monopoly in tact. I ask the commission not to empower the gorilla in the room to kill their only competition.

I appreciate the opportunity to give the Commission input and I thank the Commissioners for taking the time to hear my plea. I would hope that the Commission would extend the deadline for public input, make the gorilla in the room follow the prescribed rate setting process, and in the interest of rate payors and the public reject PacificCorp-RMP's current rate increase Advice No. 16-13, filed Nov 9, 2016.

Michael Turner <turner.michael.allen@gmail.com>

Tue, Nov 22, 2016 at 11:56 PM

To: psc@utah.gov

Dear Commissioners,

I come today in opposition of the proposal of PacifiCorp-RMP's "Advice No. 16-13" filed 09 November 2016. It is my understanding this proposal would change the rate structure for rooftop solar customers. Specifically, I would ask the Commissioners to suspend the tariff and prevent this proposal from taking effect on 09 December 2016 as proposed by Rocky Mountain Power (RMP). It is in the best interests of the public of this state to require RMP to use the normal rate-making process for it's proposed changes.

I am a rooftop solar owner, but I also speak for the benefit of those who also may choose to derive their power from clean and efficient sources which only serve to benefit the State of Utah and more specifically, the counties of Davis, Salt Lake, and Utah. These counties suffer from chronic and predictable air quality problems. Additionally, allowing this proposal to go into effect will unreasonably raise the costs for new rooftop solar customers, restrict the coveted principles of free trade, and limit the access to clean and efficient energy production by the private citizen/individual. I find it slightly hypocritical of a RMP to plant and rapidly expand their own extensive solar fields near Milford, UT, yet they seek to unfairly punish those in the private sector who also wish to utilize solar power production by implementing unfair and unreasonable fees in an attempt to deter solar power production by the private sector. I believe this would be concerning for a monopoly and racketeering: RMP wants to produce solar energy, but they don't want anyone else to be able to do so; more so, they will construct an unsustainable rate structure to deter any and all in the private sector from purchasing into private solar energy production. Many studies across the United States detail the value of rooftop solar to the power system and grid. To allow RMP to create such an unfair tiered fee, applied to only rooftop solar customers, provides encouragement of "bullying" in the marketplace.

Please accept my thanks for allowing myself, a rooftop solar owner, to offer public input and first hand experience of the benefit of the rooftop solar power production systems. I would ask you extend the period for public comment and not allow RMP to push this type of aggressive rate change proposal through your commission without adequate time for those of us who care about clean energy, a chance to speak in our behalf and in behalf of those who would join us as private solar owners. I respectfully request the Public Service Commission, in the interests of ratepayers and the public of this state, to REJECT PacifiCorp-RMP's current rate change request and proposal.

Thank you for your time in receiving this letter. I applaud your work protecting the State of Utah for the best interests of the public. Protect a clean Utah, and protect us, the private sector from the predatory and overly aggressive rate hike proposals of RMP

Sincerely,

Michael Allen Turner

Dear Commissioners,

I vigorously oppose the recent proposal from Rocky Mountain Power "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about our current and future quality of life here in Utah, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality is visibly problematic, and the detrimental effects to residents have been scientifically documented in a recent BYU study. I believe rooftop solar should be part of the solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

Sincerely,

Paula W. Christiansen

1 message

John Redman <redman.djohn@gmail.com>

Tue, Nov 22, 2016 at 11:59 PM

To: psc@utah.gov

Cc: John Redman <redman.djohn@gmail.com>, Pam Redman <redman.pam@gmail.com>

Dear Commissioners,

I am DEEPLY opposed to PacifiCorp-RMP's Advice No. 16-13, filed 9Nov16 to change the rate structure for rooftop solar customers.

1. RMP is attempting to bypass the normal rate-setting process;
2. they created an extremely quick deadline to avoid public input;
3. they scheduled it on Thanksgiving week, again, to avoid public input.

This all smells like dirty politics and an attempted shady overreach by a government-regulated monopoly.

This proposal should soundly REJECTED immediately.

RMP works for it's customers and the government.

Their entire proposal appears anti-solar and would make even Nevada blush.

Nevada's government and power company have destroyed the solar industry in their state, have restricted free trade, and grossly limited taxpayer's access to clean energy .

I just spent \$27K to put solar panels on my roof this spring.

My power bill is now about 30-40% of what it was, mostly due to flat fees in addition to power usage charges.

The combination of the Federal and Utah State tax-due credits, my out-of-pocket expenses were \$17K.

The power company has a record of increasing rates ~5%/yr for the last decade or more.

I am recently retired living on a fixed income.

The solar energy option gave us a means of decreasing our energy costs significantly!

And, our savings will decrease even more substantially as the power company raises their rates.

It would seem that the Federal and UTAH tax credits to encourage solar should:

- (a) encourage home owners to install clean energy;
- (b) decrease pollution and improve the environment;
- (c) makes me more energy independent;
- (d) decrease future power plant expansions and expenses in the future.

Increases rates for solar customers is counterproductive to all of these reasons.

In addition to (c) above, we installed upgraded inverters that allow us to have 3KW of power available when the external power grid is down.

This means that we can keep freezers (1), refrigerators (3), furnaces (1) and microwaves (2) working when the power is out saving potentially thousands of dollars in spoiled food.

I have a propane-powered generator to do the same at night or when the sun is not shining.

Presumably, RMP has proposed a grandfather clause to protect existing solar users.

This seems like a great ruse which will be attacked later .

- (e) there is NO guarantee that the grandfather clause will stay in effect;
- (f) how will I repair or upgrade my system when all the solar companies have gone out-of-business?
- (g) there is NO precedent for such grandfathering.

BTW: We just had power multiple outages last week during a recent mild rainstorm that rebooted computers, reset clocks, and set off alarm warnings.

This seems to happen multiple times per year .

We find that quite unacceptable when our pre-solar power bills were over \$300/mo in a large community where power should be a constant.

Maybe RMP should focus on fixing their distribution system instead of attacking solar power?!

Back in the late 1970's, I began building a solarium to assist heating our home in Colorado.

This was part of a Federal incentive program encouraged by the Reagan administration.

Before it was finished, the federal incentive was done away by Carter et al.

That was 50 years ago!!!

Had the government continued to support solar energy over that 50 years, IMAGINE how much cleaner the air would be, how much less carbon would be in the environment, and how much smaller power plants could be!!!

Please REJECT this proposal outright and permanently and send RMP back to get their industry to get in-line with modern technology while at the same time: (i) keeping your promise to home owners who have already invested in solar energy; (ii) improving the environment; (iii) keeping the solar industry alive and well; (iv) allowing taxpayers to have freedom of choice; (v) reducing future power plant expansions and expenditures; (vi) exercising prudent control over a government-controlled monopoly; (vi) encouraging the growth of small businesses; and (vii) probably a host of other benefits we haven't thought of.

Thank you for accepting public input.

I would be available for comment if that would be helpful.

Deeply concerned,

John & Pam Redman

Wed, Nov 23, 2016 at 12:01 AM

To: psc@utah.gov

Dear Commissioners,

I apologize if this is sort of all over the place, but I just found out that today is the last day for public input. I have been working all day and taking care of my family all night. I am exhausted but need to express my concerns:

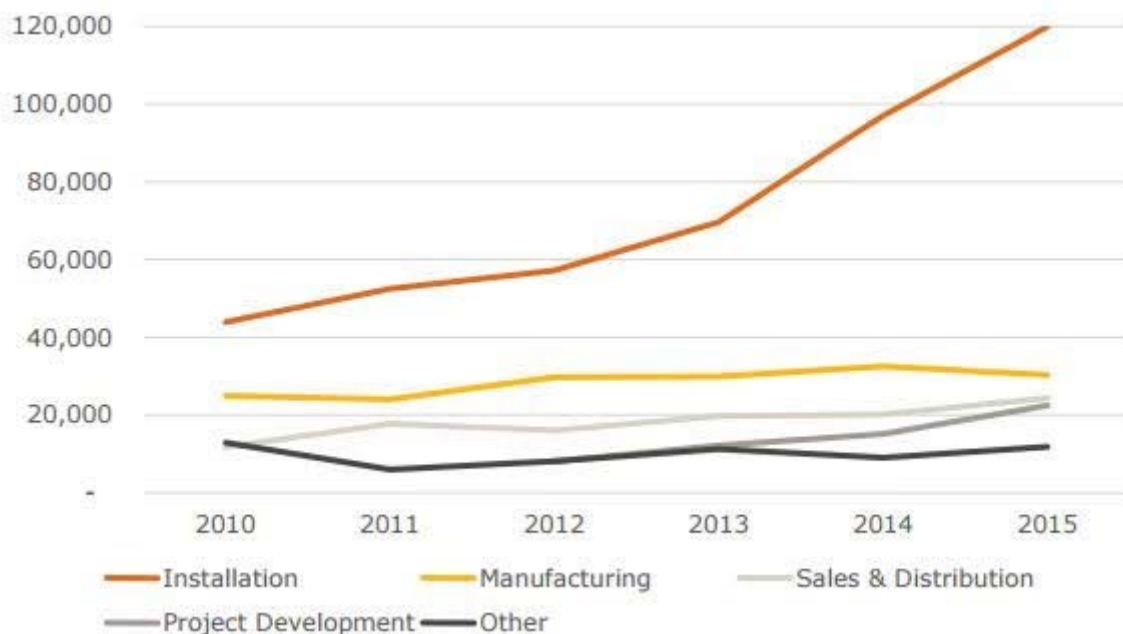

I am begging you, as a lifetime resident of Utah, to please hold off on the proposed new solar rate structure by Rocky Mountain Power. It is being rushed and pushed for, what I believe, the financial benefits of Rocky Mountain Power, and it needs to be researched more thoroughly. I understand customers need to help pay for the grid. However, what is being proposed, is outrageous.

We actually live in Provo and would not be affected by the rate changes. I am asking you to look into this because I am tired of our air quality, I am truly concerned about our world (please watch the National Geographic documentary with Leonardo DiCaprio "Before the Flood"--it's the most powerful and eye-opening thing I have ever seen), and I am tired of the government being bought out by companies with deep pockets. It infuriates me that these proposed fees are the highest in the nation. This takes away a consumer choice and allows Rocky Mountain Power to continue its monopoly.

Utah is known for having some of the worst air quality in the nation. I know several people who have actually moved out of state after researching how bad it is for us. I would hope that our own government would help fight this problem. I am worried financial interests are getting in the way of the best interests of our citizens. Utah needs cleaner air!!!

I saw the information below the other day and thought it was very interesting. You would be killing a giant industry in this state with these proposed fees and losing millions in tax revenue!

9. US solar energy industry added more jobs in 2015 than the US oil & gas extraction & pipeline industries added combined, and grew 12x faster than the US economy as a whole.

<https://cleantechnica.com/2016/08/17/10-solar-energy-facts-charts-everyone-know/>

I am simply trying to do what I feel is right for our earth, my children, my future grandchildren, and so on. There are a few things that are undeniable and need to be taken into consideration. One thing is that fossil fuels are finite, the sun is not (eventually it is but then nothing matters 😊). I feel that we are destroying our world to extract what is left. The other thing, is that I would prefer to breathe the air from energy produced by solar panels over the air from energy produced by power plants. For me it is simple.

Why don't we be in the state that is an example of forward progress and clean energy?

Thank you for listening to my exhausted concerns.

Mikell Heinz

Anthony Garcia <garan2012@gmail.com>

Wed, Nov 23, 2016 at 12:11 AM

To: psc@utah.gov

Docket #16-035-T14 Public Comment**Dear Commissioners,**

I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I and all my family and neighbors urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I have a right to choose how I supply power to my home. This is unconstitutional and restricts free trade. Why would you or how can we as a state limit access to clean and efficient energy? This would unreasonably raise the costs for new rooftop solar customers as well. The solar industry is providing so much of an economic boom in Utah that to not suspend the proposal, therefore effectively killing the industry is going to cause hardship for so many people and business'.

The use of renewable energy, in particular rooftop solar, is a win, win, win for everyone. From the economic boom it provides to residential customers and business', to the power company being able to more efficiently and more effectively keep up with demand charges, and lastly reducing our carbon footprint which Utah so desperately needs.

Lets cause change here. Lets be at the forefront of this industry for others to follow. Our future generations need this and depend on us to put our foot down and demand a better place for them then what we are currently leaving behind. I have read many articles and seen countless studies from other regions where it has been proven that rooftop solar has significant value to the power system and the grid.

Thank you very much for accepting public input. Please keep in mind the interests of the ratepayers and the general public. Please reject PacifiCorp-RMP's current rate change request. Or suspend it until we can find a more

reasonable agreement. If we do not then we again are effectively killing the entire industry and we will regret that decision.

Dear Commissioners,

I strongly oppose PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, stating changes to be made to the current rate structure of rooftop solar customers. Please deny the utilities fast-track request and and require them to use the normal rate-making process for its proposed changes.

Allowing this proposition will directly and negatively affect the growth of solar energy business in Utah. We live in a time where investment in renewable energy is becoming crucial to a sustainable future. Let's work together and give people incentives for switching to solar not discourage them.

Thank you for allowing public input on this matter although I sincerely feel the deadline should be extended to allow a greater feedback. With much respect, I urge the PSC, in the interest of ratepayers and the Utah public, to reject Pacificorp-RMPs proposed rate-change request.

Kindly,

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Vera Shepherd

Wed, Nov 23, 2016 at 12:31 AM

To: psc@utah.gov

Dear Commissioners,

I strongly oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is very counter productive and unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. That type of Tariff impedes progress, perpetuates monopolistic greed, and deters people from choosing more sustainable power options. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy.

You have seen the inversion we have in Utah, our air quality needs to improve not digress, and I believe rooftop solar should be part of that solution. If any Tariff should be imposed it should be implemented on power coming from fossil fuels that contribute to the pollution and there should be discounts or incentives to people that choose cleaner energy options such as solar.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,
Skyler Ostler

Wayne Rogers <wrogers@solarcity.com>
To: "psc@utah.gov" <psc@utah.gov>

Dear commissioners,

My name is Wayne Rogers I am a new resident to the Utah area I just moved my family from Texas to be closer to aging parents and my children that live in West Jordan area. I began to research and realized that much of it is from factories, cars and also power producing stations and some wood stoves etc.

Although the problem will not go away in a few short years it definitely won't unless we act on it sooner than later. I decided at this moment to try and make a difference, I left the food industry to make a difference for mankind. Thus giving me the opportunity to fight for those less fortunate that either don't feel that they have a say or do not know any better to speak up regarding raising rates also says they aren't losing anything either except opportunities for people like me, My beautiful wife Misti and my kids Ezra and Jayda that want to help make Utah have clean air for future generations, the air in Utah and also control over yours and my family's needs and wants.

Thanks for reading and understanding.

Wayne Rogers

jared burningham <gbburningham@gmail.com>

Wed, Nov 23, 2016 at 12:39 AM

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

My name is Jared Burningham. Everyone calls me GB though. I am from Ogden, UT. I am the son of an Ogden High School art teacher. He always taught me to appreciate the beauty of the earth. I always remember my father's advice to leave things better than the way you found them. For these reasons I am passionate about the solar industry as my career choice. I currently was able to move back home to Utah because the industry I am passionate about became viable here. Previously I worked two years in Hawaii and California in solar Through solar, we can take better care of our environment and better serve our community with low cost energy solutions.

I believe the proposal from Rocky Mountain Power is a direct attack against competition. Getting rid of the competition not only leaves thousands without work but also eliminates the chance to "leave it better than the way we found it".

I believe in compromise and doing what is fair. To determine this, a non-bias third party entity should do a study of how solar and RMP can work together to best serve the great people of Utah.

Please reject Advice No. 16-13. This is not a proposal for a fair compromise to best serve our communities, rather an attack to protect profit. Let's find a better way to serve our people.

Thank you for your time and consideration.

Sincerely,

Jared "GB" Burningham

Dear Commissioners,

I strongly oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I strongly believe rooftop solar should be part of that solution. Utah residents are suffering myriad health issues from our poor air quality and honestly, it's an embarrassment to the rest of the nation and to other nations abroad. I want to be proud of my state and our efforts to mitigate climate change and keep our air clean. I care so much about Utah and it's people. Please.

Thank you for taking public opinion into account on this issue. The voice of the public is the cornerstone of democracy and now more than ever is it important to listen to local voices. The federal government is not going to look out for us. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Chandler Rosenberg, chandler.rosenberg@gmail.com, Salt Lake City, UT

To: psc@utah.gov

I like to express opposition to PacifiCorp-Rocky Mountain Power's Advice No. 16-13.

My belief that Rocky Mountain Power's proposal would unfairly change the rate structure for rooftop solar customers.

- I Ask the Commission to suspend the tariff and prevent Rocky Mountain Power's proposal from taking effect on December 9.
- I Suggest that Rocky Mountain Power use the normal rate-making process.
- I oppose because all saving that we planning to have will be avoided, and the State will loose a lot of the jobs, the Solar Industry created , our economy is frágil and with this will collapsed.
- I Encourage the commissioners to consider the environmental benefits of solar.
- I Invite the commissioners for being willing to listen to the public.
- Thanks for your willingness to help on this matter.

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power , "Advice No. 16-13", filed Nov . 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner , more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power , and reject Advice No. 16-13.

Regards,

Mark Burnett

Jeff Hollingworth <jeffhollingworth@gmail.com>

Wed, Nov 23, 2016 at 5:00 AM

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power , "Advice No. 16-13", filed Nov . 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process. Why should any entity , with a government-sanctioned monopoly, be able to impose such a dramatic change with only one month response time? All ratepayers should have time to consider the ramifications of the study conducted by Rocky Mountain Power and have time to conduct similar third-party studies to determine the objectivity and accuracy of the Rocky Mountain Power analysis. I have numerous questions about the projections for future grid expansion given the alleged growth projections of solar energy and desire an explanation as to why the current rate structure was allowed if they deemed solar growth to be such a detriment. Furthermore, they've bought their own solar farm. How does that affect their rate structure. Much more time is needed to satisfy the ratepayers that the proposed changes are legitimate and in the best interests of all involved.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner , more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution. We have all seen the images of poor air quality in the valley , especially during the winter. Solar is a step in the right direction--we shouldn't be thwarted by industry without a chance to determine what alternatives are available to both sides.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power , and reject Advice No. 16-13.

JEREMY YORK Owner <jygomer@centurylink.net>

Wed, Nov 23, 2016 at 5:20 AM

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power "Advice No. 16-13", filed [Nov. 9, 2016](#), that would change the rate structure for rooftop solar customers. ~~Let~~^{Can} the Public Service Commission to suspend the ~~tariff~~^{tariff} prevent it from taking effect on [December 9](#) as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

Having lived in Utah all my life I have experienced our bad air quality every year and know that change needs to happen and believe that stopping Rocky Mountain Power from crippling the roof top solar industry in Utah is a way we can make a difference. I am very concerned in our impact on the planet and cleaner ~~goals~~^{goals} is a must it will both help our air quality as a state and the planet as a whole. Let's not make the same mistake as Nevada and let them create a monopoly on this market and make them stay competitive on their rates.

Thank you for taking the time to listen to my concerns regarding this matter and please ask that you strongly look at the detrimental side effects that passing this could cause to the rooftop solar customers in Utah. Please reject "Advice No. 16-13".

Sincerely

Jeremy York, jygomer@centurylink.net, West Jordan, UT

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

Rocky Mountain Power is using it's political influence and relationships to attempt to eliminate competition. Crony capitalism is never good for any economy, especially one that would benefit from clean energy and choice in the market.

I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Camilla Jones, camiols@gmail.com West Jordan

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers, including my parents, who wish to use rooftop solar. A few years ago my mother had a stroke which paralyzed her entire left side and she was unable to continue to work, hindering my parents income and forcing my dad to work from home so he can care for her. Not long after that my dad was laid off from his job and now they have no income at all. My parents decided to get solar panels because it would help them save money that they desperately need. Please do not let this law pass for the sake of my parents and so many others who are trying to save every dollar they can.

I am also deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

Sincerely,

Cheryl Dickson

Emrys Larsen <emryslarsen@gmail.com>

Wed, Nov 23, 2016 at 5:48 AM

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. They have a monopoly and this proposal is their way of preserving it. In the interest of a free market, and in the interests of all Utahns who want to choose solar without being unfairly punished by the utility companies, please reject this proposal.

Just remember what happened in Nevada when a similar proposal was passed there. New customers for solar companies dropped 90%. Such a course of action could eventually put many people, including myself and my wife, out of a job.

I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution. Utah is such an amazing place, and rooftop solar is going to help clean up the inversion that hits the Utah and Salt Lake Valleys so hard. This is one of the state's primary problems, and RMP's proposal is going to make it worse in the long run by ensuring fewer people sign up for clean, renewable solar energy.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

To the Utah Public Service Commission:

I oppose PacifiCorp-Rocky Mountain Power's Advice No. 16-13. Rocky Mountain Power's proposal would unfairly change the rate structure for rooftop solar customers. The Commission should suspend the tariff and prevent Rocky Mountain Power's proposal from taking effect on December 9. I suggest that Rocky Mountain Power use the normal rate-making process. Please consider the environmental benefits of solar. Solar is clean energy and reduces carbon pollution. Clean energy benefits everyone.

Thank you for being willing to listen to the public.

Jay Beck <jaybeck@waterfordschool.org>

Wed, Nov 23, 2016 at 6:26 AM

To: psc@utah.gov

Dear Commissioners,

As a concerned citizen of Utah, I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

For reasons that seem to be obvious to us as residents of Utah, these actions of Rocky Mountain Power should not be allowed. They simply should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. These changes proposed by Rocky Mountain Power not only affect me, but every other individual within the state who currently breathes the unclean air we experience within the state. Various articles support that the use of solar helps to reduce the need for other less clean forms of energy generation.

I would personally like to thank the Commissioners for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

To: psc@utah.gov

Dear Public Service Commissioners,

We (our family of 4) oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. We respectfully urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

We believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. We are deeply concerned about the future of our planet, and we believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and we believe rooftop solar should be part of that solution. In addition, it is a thriving industry in Utah right now, employing many people (in the thousands) all over the state. If you approve this RMP proposal, the vast majority of these people will be out of work.

Thank you for accepting public input on this critical issue. We respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Mark Maziarz
Mary Beth Maziarz

mcrossly <mcrossly@xmission.com>

Wed, Nov 23, 2016 at 6:35 AM

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

I further believe where they have set it up where come March 31st all excess credits they absorb there by obtaining additional compensation from solar production.

I have not yet made the move to solar but am in the process of exploring the option and this additional cost for an expensive proposition could be a deal breaker.

Sincerely,

Michael W. Crossley, mcrossly@xmission.com, Alpine, Utah

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

Rocky Mountain Power's proposal is too drastic. It would make more sense to start removing the solar incentives issued by the State of Utah, (and the federal incentives). If not, we would have the State of Utah incentivizing solar while Rocky Mountain Power imposes a fee structure which makes it economical unfeasible regardless.

Utah's Wasatch Front air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Rodney Smith, rodneys@doittech.com, Draper, UT

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers.

I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed.

Rocky Mountain Power should be required to use the normal rate-making process.

Rocky Mountain Power already has a monopoly on the means of power production in western states, and raising rates for customers who wish to use rooftop solar is just another example of the corporatism that's taken over our country limiting our freedoms.

Private and residential solar makes sense, and if individuals want to free themselves from corporate cartels and monopolies, why prevent them from doing so?

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

Marian Burningham <marianburn@digis.net>

Wed, Nov 23, 2016 at 7:06 AM

To: psc@utah.gov

Dear Commissioners,

We are writing in opposition to PacifiCorp/Rocky Mountain Power's Advice No. 16-13 and to respectfully ask the Commission to suspend the tariff and prevent Rocky Mountain Power's proposal from taking effect on December 9.

We strongly believe that Rocky Mountain Power's proposal would not only unfairly change the rate structure for rooftop solar customers, **it would also be detrimental to Utah's goal of bringing more high-tech and clean energy companies to Utah.** As we are sure you are aware, the State has recently undertaken the major project of moving the State Prison in the hope of further development of "The Silicon Slopes" at point of the mountain. Most, if not all, of the sort of company we want to attract could very easily be sent the wrong message regarding our State's commitment to a desirable environment for their businesses AND their employees. The demographic of high-tech employees include a very high number of people who are committed to environmental issues and sustainable living. A strong commitment on the part of our State to clean energy and all the benefits to the environment and daily lives of citizens living here can be a very important part of any proposal to encourage these businesses to move here.

We further believe that allowing Rocky Mountain Power's proposal to go into effect would be the equivalent of shooting ourselves in the foot where environmental issues and their impact upon the natural wonders of our beautiful State is of grave concern. Tourism is a key part of our State's economy. There already exists a negative impression surrounding Rocky Mountain Power's Emery County power plant and its impact upon State and National Parks, both geophysical and aesthetic. Allowing this proposal to go into effect could have the long-term effect of discouraging individual conversions to clean energy. Allowing the roof-top solar home installations to continue and supporting consumers in this effort can do a great deal to preserve our reputation and help clean up our air. We cannot change the geographical features that lead to such terrible air quality (already an issue for winter tourism particularly) but we can include encouraging clean energy alternatives for homeowners and individuals as a large part of the solution.

We encourage you to not allow Rocky Mountain Power to unreasonably raise the costs for new roof-top solar customers and to maintain its normal rate-making process. Roof-top solar installations and the resulting flow of power into the grid are beneficial to Rocky Mountain Power as well as to consumers, providing clean energy produced at little cost to RMP to nearby homes. Current billing procedures of RMP "zero out" energy credits each spring. This means that they already reap the benefit of excess solar energy produced and put into the grid by solar customers. Changing the rate structure or adding additional fees or impediments to Utahans would be a crippling and near sighted mistake.

Lastly, we wish to thank you for being willing to consider public input on this issue. Your final decision will have a great and lasting impact upon all our citizens, their health and quality of life, and those who travel or vacation here — all ultimately impacting upon our economic future.

Sincerely,

Kevin and Marian Burningham

Wed, Nov 23, 2016 at 7:10 AM

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

It is my opinion and I think that the free market should be protected as with a service like solar power for those who want to use it as an alternative power source.

Those in the solar industry whom provide the opportunity to have and use a natural resource are forward thinking, innovative people that have tapped into a God given gift.

That being said, Solar power with all of it's features and benefits to millions shouldn't be stymied by an already greedy and in my opinion an ill regulated conglomerate such as Rocky Mountain Power.

With the power and money that backs such a utility again "in my opinion" can show distorted facts and figures to common people as myself and many that I know and we are left to believe their findings and figure reporting.

We the people really have no way or resourcing information or confirming, following and in many cases understanding all that is reported by such companies.

So for us consumer's, a solar company comes in that offers a service, then we see "Rocky Mountain Power" retaliate against a solar alternative by levying financial proposals to stymy the service.

I see in this case with Rocky Mountain Power an open, fair and balanced reporting system is a myth.

In my mind they are suspect of a hidden agenda and reporting on themselves as a public utility.

I oppose the recent proposal from Rocky Mountain Power "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Dan Johnson <dan444@gmail.com>

Wed, Nov 23, 2016 at 7:15 AM

To: psc@utah.gov

Dear commissioners,

Thank you for accepting public comment on Advice No 16-13. I feel strongly that Rocky Mountain Power is making a poorly considered short term play to recommend placing their quarterly profits over the long term viability of the air and environment in our state. Utah is one of the few states in the US that still heavily relies on burning coal for much of its energy needs; at the same time it is very well suited to replacing that energy production with solar power . It seems very irresponsible and backward to squash a growing industry that could replace that dirty energy production. Utah can be a leader in this area. Let's look to the future, to our planet, and our children. Rocky Mountain Power will be fine or they can change.

Thanks,
Dan Johnson

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

I am contacting you to express my opposition to the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I would ask the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I have rooftop solar panels and benefit from the power that is generated there. I made the choice to do so in an effort to lessen the power burden on Rocky Mountain Power. I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. My choice to use solar power is to decrease my cost for energy and to also reduce my carbon footprint. I feel that by doing this, I am doing my part to clean up Utah's air quality, and to reduce use of harmful to the environment products. I believe rooftop solar should be part of that solution. If actions to increase the cost of buying and maintaining items such as solar panels increase, people will be less willing to purchase and help clean our air.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

PacifiCorp-RMP's "Advice No. 16-13"

1 message

Martha Beck <marthabbeck@msn.com>

Wed, Nov 23, 2016 at 7:27 AM

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

As a concerned citizen of Utah, I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

For reasons that seem to be obvious to us as residents of Utah, these actions of Rocky Mountain Power should not be allowed. They simply should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. These changes proposed by Rocky Mountain Power not only affect me, but every other individual within the state who currently breathes the unclean air we experience within the state. Various articles support that the use of solar helps to reduce the need for other less clean forms of energy generation.

I would personally like to thank the Commissioners for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power "Advice No. 16-13", filed November 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

My family and I made this investment in good faith that there would be some return on our investment. This is very important to Utah and to our economy. It has been clearly documented that Utah's poor air quality has cost Utah jobs, increased health cost and we have admitted to this problem. Image and impact are incredibly important to maintain investments in Utah's economy and infrastructure. This initiative is counter to those efforts and can be supported in other ways.

Wed, Nov 23, 2016 at 7:31 AM

To: psc@utah.gov

Dear Commissioners,

I am writing in opposition to PacifiCorp RMP Advice No. 16-13 which is recommending a rate increase for users of grid-tie solar systems. I urge you to suspend the tariff and require that the proposal for the rate increase be subjected to the normal rate-making approval process.

Rocky Mountain Power fills my television, radio and mailbox with advertisements strongly pushing for conservation and efficiency. What better way to conserve our natural resources than harvesting solar energy, especially during the sunny summer peak demand times in the desert.

I am concerned that the proposed rate increase is being used a tool to stifle the blossoming competition in the electrical distribution market in my area, which until now has been essentially provided by one player. RMP has been a long-term benefactor from an electrical monopoly. Let us pause and let competition improve cost and quality of service for all.

I, along with many of my associates, have invested significant amounts of money in various solar-electric systems for my residence and other off grid applications. I would encourage others to enjoy the benefits of solar energy as well. A rate increase from RMP would adversely impact my decision to upgrade and expand my system.

Thank you for accepting public input on this matter. In my opinion, however, the time period for public input should be extended. Ultimately, I ask that the current rate change request be rejected. Let the free-market decide the value of services provided by RMP.

Respectfully submitted,

Ben Coray

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power , "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. It is important that the Public Service Commission suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . The solar panels on my home only provide about 50-60% of the power to my home. So I still use Rocky Mountain Power for a good portion of my power. The power I do use from Rocky Mountain power is about the same as other 4 bedroom homes. RMP does not penalize homes without solar for not using enough power . So it makes no sense for home owners to be penalized for using solar.

I also feel that offering an incentive to purchase and install solar panels, only to then give a tariff to those customers, is deceptive and unfair. Because Rocky Mountain Power has a monopoly on power , there is little incentive to reduce customer cost or find alternative renewable resources to add to the grid. The air quality in Utah needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power , and reject Advice No. 16-13.

Sincerely,

Valarie Kingsbury, vpkingsbury@gmail.com , Herriman, UT

Earl Decker <ford27t@awinets.com>

Wed, Nov 23, 2016 at 7:38 AM

To: psc@utah.gov, ocs@utah.gov, evickers@le.utah.gov, blast@le.utah.gov

Cc: macegd@awinets.com, info@legendsolar.com, petitionsare@moveon.org

I oppose Rocky Mountain Power's(RMP) proposal to change the rate structure for rooftop solar customers. I believe that fast-tracking this proposal is unfair to RMP's existing customers by not allowing sufficient time for their customers to comment on this proposal.

We solar customers have invested a considerable amount of money in our rooftop installations. We are motivated by the belief that our investments will benefit both the power companies that have invested in their electrical generating plant and at the same time, we feel solar power is the future of electricity generation; we feel the future is here.

It is unclear to me of what benefit to solar customers this proposal is intended except to penalize we rooftop customers for being forward-thinking. We do not ask or intend to ask RMP to service, maintain or repair our installations. By taking this forward step and investing our incomes on rooftop solar power, we have taken on this responsibility. I see no interaction on the part of the power company(s) in future operations regarding these installations.

The benefit to RMP's current non-solar customers is that the electricity I produce above what I use, goes to the grid for the use of my neighbors. The need to increase existing plant by RMP and other power companies is reduced by the savings we are providing to them.

Traditionally, when any business expects to increase or replace existing plant, plans are laid far in advance before it is needed. Had RMP projected the need to change from carbon producing electricity to more modern solar or wind systems, this "untimely" proposal would not be necessary. It is clear to we rooftop solar users that our concern for our environment is upmost on our minds. We feel we are not only assisting RMP and other companies to save costs but we are helping preserve a quality of life that we have come to expect in the state of Utah.

We have seen the result of such a proposal has had on our neighboring state of Nevada when RMP and the state passed similar legislation; job losses, an industry decimated (rooftop solar applications dropped by 99%), countless lawsuits filed and a dwindling electrical plant destined for going the way of the Model T and propeller airplanes. The future doesn't look bright for Nevada.

Concerning costs, the electricity we send back to the grid is almost free to power companies. They are then free to sell to existing and new customers. Keep in mind that we pay retail prices for the electricity we use as all other users. True, we are paid for the electricity we generate, at reduced rates that power companies can up-charge to their non-solar customers. We rooftop customers see this as a benefit to all parties; we get a small reduction in our monthly bill and other customers get a more reliable electrical service. Additionally, off-property meter readings are the result of the interest in solar, the power companies are only responsible for service to the home structure, there is no added personnel needed once the rooftop solar plant is in service. This proposal is unnecessary and an undue burden on rooftop solar users.

11/29/2016

State of Utah Mail - PacificCorp-Rocky Mountain Power's Advice No. 16-13

I thank the commissioners for being willing to listen to the public on this matter . I encourage you to turn down Advice No. 16-13

Sincerely,

Mr. & Mrs. Earl G. Decker

Dear Commissioners,

I OPPOSE the recent proposal from Rocky Mountain Power filed 11/9/16

Not only will it destroy jobs in the solar industry but it will make Rocky Mountain Power a complete Monopoly! Rocky Mountain power prior to my purchase of solar was pushing to put a box on my A/C to shut down during peak, they also send in every bill to purchase solar from them, I find it ironic and hypocritical they would even submit this increase!

We do pay in each bill a fee to cover the cost of maintaining the grid, but solar purchasers also take a strain off the grid that saves RMP money!

Some question need to be answered, what do they do with the extra power I generate and others that we over generate that they take our credits every March.. Should they not be buying my power at a fair rate?

Please, Please do not let this happen as it will be another kill to the environment and will kill the solar industry like it did in Nevada

Sincerely,

Robert Schmidt

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet due to the alarming rate of climate change, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Megan Owens, megowensz@gmail.com, Layton UT

Dear Commissioner s,

I have used my own money and personal labor to install a solar system at my personal residence.

The incentive was to live more green, help the environment and to be able to have a decent return on by investment.

The proposal by the big monopoly RMP is trying to change all that.

Please do not support the proposed rate increase to impose a 3-tiered rate system on solar customers.

Dear Commissioners,

Thank you for accepting public comment on the recent proposal from Rocky Mountain Power (Advice No. 16-13, filed Nov 9, 2016) that would change the rate structure for rooftop solar customers. I strongly oppose the proposal and urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner , more reliable source of energy. Utah's air quality is embarrassing, sickening and must improve, and I believe alternative energy sources including rooftop solar should be part of that solution.

I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

ingrid griffie <ikgriffie@gmail.com>

Wed, Nov 23, 2016 at 7:52 AM

To: psc@utah.gov

Dear Commissioners,

Please do not let Rocky Mountain Power change its rate structure for rooftop solar customers as proposed in "Advice No. 16-13."

Solar customers, like my family , not only provide an enormous environmental benefit to the community as a whole, but by investing in rooftop solar, we have participated in nurturing many, many local jobs in the burgeoning solar industry in Utah. Currently, Utah has the opportunity to be a nationwide leader in this relatively young and fast-growing industry.

Ultimately, solar customers help save Rocky Mountain Power money by reducing the need for capital investment over time in additional fossil fuel burning sources of power. Furthermore, especially in a great western state like Utah, which values self-reliance, property owners ought to have the ability with reasonable affordability to seek energy independence or near independence from the constraints of a public utility.

Please do not let Rocky Mountain Power raise rates for rooftop solar customers, and thank you for taking public comment on this important issue.

Sincerely,
Ingrid Griffie

Tania Saunders <taniahalesaunders@gmail.com>

Wed, Nov 23, 2016 at 7:59 AM

To: psc@utah.gov

I'd like to express my opposition to PacifiCorp-Rocky Mountain Power's Advice No. 16-13. Their proposal will unfairly effect rooftop solar customers. I have friends who currently have solar on their home and instead of paying the Rocky Mountain Fee have told me that they will remove their solar system.

Please consider the benefits of Solar. I am very concerned about the air quality and state of the environment here in Utah. Our air quality is some of the worst in the country . Having had Asthma as a child, it really impacts families to have to wonder if it's safe for their kids to play outside. If we "punish" solar customers, the industry and demand here in Utah will dry up and any benefit we might have attained with solar will go away as it's no longer economically beneficial for consumers to purchase solar.

Rocky Mountain Power should use the normal rate making process.

Thank you for listening to the public. My personal info is listed below . Thank you!

Schedule 136 and its related Schedule 5 tariff.

1 message

Joan Winslow <joan@xmission.com>

Wed, Nov 23, 2016 at 8:03 AM

To: psc@utah.gov

Good morning,

I utterly oppose Schedule 136 and its related Schedule 5 tariff. Rocky Mountain Power pays people to waste electricity on frivolous Christmas lights, and they want to charge responsible people who have installed solar *extra*? How is this rationalized? How does this help keep power plant emissions out of our polluted air?

Please keep their greedy, shortsightedness in check.

Thank you

Joan Winslow

Wed, Nov 23, 2016 at 8:10 AM

To: psc@utah.gov

Dear Commissioners,

Dear Commissioners,

I am writing in opposition to PacifiCorp RMP Advice No. 16-13 which is recommending a rate increase for users of grid-tie solar systems. I urge you to suspend the tariff and require that the proposal for the rate increase be subjected to the normal rate-making approval process.

Rocky Mountain Power fills my television, radio and mailbox with advertisements strongly pushing for conservation and efficiency. What better way to conserve our natural resources than harvesting solar energy, especially during the sunny summer peak demand times in the desert.

I am concerned that the proposed rate increase is being used a tool to stifle the blossoming competition in the electrical distribution market in my area, which until now has been essentially provided by one player. RMP has been a long-term benefactor from an electrical monopoly. Let us pause and let competition improve cost and quality of service for all.

I, along with many of my associates, have invested significant amounts of money in various solar-electric systems for my residence and other off grid applications. I encourage others to enjoy the benefits of solar energy as well. However, a rate increase from RMP would adversely impact my decision to upgrade and expand my system, and I would not encourage others to participate in solar energy projects as this rate increase would negatively impact the benefit of the system.

Thank you for accepting public input on this matter. In my opinion, however, the time period for public input should be extended. Ultimately, I ask that the current rate change request be rejected. Let the free-market decide the value of services provided by RMP.

Respectfully submitted

Rick Whiting

Wed, Nov 23, 2016 at 8:11 AM

To: psc@utah.gov

I am writing to urge you reject Pacificorp's Advice No. 16-13, a blatant attempt by Rocky Mountain Power to retain a monopoly on Utah's power. It is obviously in their interest to prolong any benefit to solar customers. Why are we letting them restrict our choices for clean and more efficient options? Solar power is important for our future! And the fact that they filed this during the holidays so people would be too busy to get involved is despicable! Please make them keep the normal rates.

Respectfully,
Selena Robins

Brendan Hatch <brendan.hatch@vivintsolarcom>

Wed, Nov 23, 2016 at 8:13 AM

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

Sincerely,

Brendan Hatch, brendan.hatch@vivintsolar.com, Orem, UT

Opposition to RMP's proposed Net Metering Rate Change...

1 message

Nick Cova <nickcova@yahoo.com>

Wed, Nov 23, 2016 at 8:13 AM

To: psc@utah.gov

To Whom it May Concern,

I am writing in opposition to RMP's proposed Net Metering rate change and am requesting that you deny Schedule 136 and its related Schedule 5 tariff. RMP is a regional monopoly and the grid has been built for and paid for by all the rate payers over the years. RMP is now directly targeting solar with disproportionate rates. Solar should be viewed as a way to mitigate increased demands on centralized electricity generation. This has the effect of reducing RMP's required investment in CAPEX for incremental centralized power generation. And as a regional monopoly, RMP is a "public utility". The emphasis being on the fact that they should be serving the best interests of the public. As such, reduced CAPEX is a significant benefit. Furthermore, reducing greenhouse gas emissions is a significant benefit; as are the reductions in health issues (and ensuing costs) related to power generation emissions.

Therefore, I strongly recommend the Public Service Commission deny Schedule 136 and its related Schedule 5 tariff.

Sincerely,
Nick Cova

Wed, Nov 23, 2016 at 8:21 AM

Dear Commissioners,

I am vehemently opposed to the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I feel like this has not been the best way to bring up this matter by RMP with the short time frame to act on it, at least from the public's being informed about it and the process to make a fair decision. I strongly urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process. Why is this not the process that has been done or proposed to be done?

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution. And I believe that RMP wants to punish those of us that are using or will be using solar to help with the over all picture of our energy needs.

In light of what RMP wants to do, are they going to assess the new tariff for their own solar panel array customers that they have signed up recently? Are those customers aware of this? Or do they get special consideration because the solar panels are done by RMP rather than individual solar users that have put forth an investment with the hope of helping with their power bills as well as helping the environment and better supporting the power grid?

Thank you for accepting public input on this most important issue. I respectfully request that you put the interest of ratepayers and the Utah public, please please please, on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,
Calvin Greene, salsacal9@yahoo.com, Salt Lake City, UT

S. Robert Bradley <rbooradley@gmail.com>

Wed, Nov 23, 2016 at 8:27 AM

To: psc@utah.gov

Dear Commissioners,

I hereby express my strong opposition to the proposal made by Rocky Mountain Power (Advice No. 16-13), filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers of Rocky Mountain Power.

I urge the Public Service Commission to immediately suspend the proposed tariff and prevent it from taking effect as Rocky Mountain Power has proposed.

I believe that Rocky Mountain Power should be required to conform to the normal rate-making process and see no reason to allow short-cutting that process.

It is unfair and unreasonable for the Commission to allow Rocky Mountain Power to raise rates for customers who wish to use rooftop solar.

I believe that we all should be deeply concerned about the future of our planet. I believe solar energy provides people access to a cleaner, more reliable source of energy. It is abundantly obvious that Utah has an air quality problem which needs to be improved, and I believe rooftop solar should be an important part of that solution.

Thank you for accepting public input on this important issue.

I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Very truly yours,

Jack Wahlen <j.bwahlen@gmail.com>

Wed, Nov 23, 2016 at 8:27 AM

To: psc@utah.gov

Dear Commissioners,

I have installed 50 solar panels on my home which have performed very well for 3 years. I am very concerned about a marked change in charges from RMP for solar customers. RMP already uses my excess power during high demand times(daytime) and receives High reimbursement for the power. If there is excess at the end of the year they pay me at their lowest rate. It appears we will have less hydro-power and will be forced to expand other generating facilities. Home solar decreases the need for capital to do so. In our present state of significant risk of terrorist events on our power supply ,diversification would lower this risk. Solar homes provide a great service to RMP by decreasing the need for additional generating capacity. This in turn helps to keep cost down for all customers in Utah. I see this as a "win-win-win" for all of us. Their new proposal will markedly curtail or even stop home solar and lead to more huge solar farms where Utah's roof top space will be less utilized for solar. This appears to be a proposal that unfairly takes away any incentive for private to expansion of our solar grid..

I recognize that the PSC must balance the needs of the public and utilities but this seems to be so unbalanced that it would essentially stop all home and business solar in favor of RMP. I hope you will not allow anything that would curtail further home and business solar expansion due to it's significant benefit to power users in Utah.

With Best Regards,

Jack Wahlen MD PHD

To: "psc@utah.gov" <psc@utah.gov>, Stephen Schultz <srschultz@hotmail.com>

Dear Commissioners,

I'm VERY MUCH in opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers.

This rate increase would impose a 3-tiered rate system on **solar customers only** that would double or triple the payback period for a solar investment.

Here is sunny UTAH, solar is a clean and efficient addition to our power grid. This is NOT about being "Green", This is about energy security for our beautiful state. It is ridiculous to financially discourage roof top solar systems with these changes.

In addition I am quite disappointed that this rate proposal by RMP was timed to leave the least amount of time for public comment or for anyone but RMP to be able to provide research or analysis for consideration. They have also carefully chosen the week of the Thanksgiving holiday for the deadline for public comment to discourage participation. the comment period needs to be extended until January 2017. We are better than this!

Thank You

To Whom It May Concern:

I am writing regarding Rocky Mountain Power Request. We just had an election that pundits say is a repudiation of Big Government. There is no uglier form of Big Government than a monopoly using the government to shut down competition. Especially a competition that is better for the environment and the consumer . Please do not let the lies and pressure from a monopoly erase choice for the people of Utah.

Docket #16-035-T14 Public Comment

1 message

Richard and Joanne Loosli <JRLOOSLI@msn.com>

Wed, Nov 23, 2016 at 8:33 AM

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

Rocky Mountain Power has filed an anti-solar special request with the Public Service Commission that asks that they be given permission to change the rooftop solar rate structure effective next month, without having to go through the normal rate-setting process.

We were informed that the PSC will take public comments until 22 Nov 2016. We realize that we are sending this email of concern a day after the deadline but we feel that the deadline was unreasonable in that we didn't receive the notice until the day of the deadline and we believe is unreasonable to allow for sufficient time for public input.

We are opposed to RMP being allowed to to raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean and efficient energy. It would severely restrict homeowners to seriously consider rooftop solar as a means to decrease the carbon footprint that they are currently contributing to the environment and is the reason we determined that we wanted to make this investment. In light of the dirty air we experience, we feel that the proposal by RMP is defeating the concern of the homeowners to lessen the amount of greenhouse gases being released into the air by installing a cleaner power producing technology

Thank you for allowing public input but we ask that consideration of RMP's request be held for the present and the deadline for public comment be extended. We respectfully ask that the PSC reject RMP's current rate change request in the interest of ratepayers and the Utah public.

Sincerely yours,

Richard & Joanne Loosli

Docket No. 16-035 T14 Public Comment1 message

S. Robert Bradley <rbooradley@gmail.com>

Wed, Nov 23, 2016 at 8:27 AM

To: psc@utah.gov

Dear Commissioners,

I hereby express my strong opposition to the proposal made by Rocky Mountain Power (Advice No. 16-13), filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers of Rocky Mountain Power.

I urge the Public Service Commission to immediately suspend the proposed tariff and prevent it from taking effect as Rocky Mountain Power has proposed.

I believe that Rocky Mountain Power should be required to conform to the normal rate-making process and see no reason to allow short-cutting that process.

It is unfair and unreasonable for the Commission to allow Rocky Mountain Power to raise rates for customers who wish to use rooftop solar.

I believe that we all should be deeply concerned about the future of our planet. I believe solar energy provides people access to a cleaner, more reliable source of energy. It is abundantly obvious that Utah has an air quality problem which needs to be improved, and I believe rooftop solar should be an important part of that solution.

Thank you for accepting public input on this important issue.

I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Very truly yours,

S. Robert Bradley

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution. I also believe that the competition solar companies provide Rocky Mountain Power is a good thing - Rocky Mountain Power should find other ways to innovate and become more competitive with their rates and offerings as opposed to exercising a tariff on rooftop solar customers.

Wed, Nov 23, 2016 at 8:27 AM

To: psc@utah.gov

Dear Commissioners,

I have installed 50 solar panels on my home which have performed very well for 3 years. I am very concerned about a marked change in charges from RMP for solar customers. RMP already uses my excess power during high demand times(daytime) and receives High reimbursement for the power. If there is excess at the end of the year they pay me at their lowest rate. It appears we will have less hydro-power and will be forced to expand other generating facilities. Home solar decreases the need for capital to do so. In our present state of significant risk of terrorist events on our power supply ,diversification would lower this risk. Solar homes provide a great service to RMP by decreasing the need for additional generating capacity. This in turn helps to keep cost down for all customers in Utah. I see this as a "win-win-win" for all of us. Their new proposal will markedly curtail or even stop home solar and lead to more huge solar farms where Utah's roof top space will be less utilized for solar. This appears to be a proposal that unfairly takes away any incentive for private to expansion of our solar grid..

I recognize that the PSC must balance the needs of the public and utilities but this seems to be so unbalanced that it would essentially stop all home and business solar in favor of RMP. I hope you will not allow anything that would curtail further home and business solar expansion due to it's significant benefit to power users in Utah.

With Best Regards,

Jack Wahlen MD PHD

Stephen Schultz <srschultz@hotmail.com>

Wed, Nov 23, 2016 at 8:28 AM

To: "psc@utah.gov" <psc@utah.gov>, Stephen Schultz <srschultz@hotmail.com>

Dear Commissioners,

I'm VERY MUCH in opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers.

This rate increase would impose a 3-tiered rate system on **solar customers only** that would double or triple the payback period for a solar investment.

Here is sunny UTAH, solar is a clean and efficient addition to our power grid. This is NOT about being "Green", This is about energy security for our beautiful state. It is ridiculous to financially discourage roof top solar systems with these changes.

In addition I am quite disappointed that this rate proposal by RMP was timed to leave the least amount of time for public comment or for anyone but RMP to be able to provide research or analysis for consideration. They have also carefully chosen the week of the Thanksgiving holiday for the deadline for public comment to discourage participation. the comment period needs to be extended until January 2017. We are better than this!

Thank You

To Whom It May Concern:

I am writing regarding Rocky Mountain Power Request. We just had an election that pundits say is a repudiation of Big Government. There is no uglier form of Big Government than a monopoly using the government to shut down competition. Especially a competition that is better for the environment and the consumer . Please do not let the lies and pressure from a monopoly erase choice for the people of Utah.

Thank you,

Darren Mower

Don't price Solar out of existence in Utah

1 message

Vernon Fuller <vernonfuller@gmail.com>

Wed, Nov 23, 2016 at 8:34 AM

To: psc@utah.gov

Dear Commissioners,

Don't make us like Nevada and other states who have killed Solar to protect the power company.

I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

For reasons that seem to be obvious to us as residents of Utah, these actions of Rocky Mountain Power should not be allowed. They simply should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. These changes proposed by Rocky Mountain Power not only affect me, but every other individual within the state who currently breathes the unclean air we experience within the state.

I would personally like to thank the Commissioners for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

To: psc@utah.gov

Dear Commissioners,

Please be advised that I oppose the PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I strongly feel that the Public Service Commission should suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. Friends and family members currently considering solar would no longer be interested if the current rates are increased. I feel solar is a very beneficial energy source and can help with reducing Utah's air quality problem.

Thank you for accepting public comment. I strongly feel that the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Micah Grant <grantmicah@gmail.com>

Wed, Nov 23, 2016 at 8:44 AM

To: psc@utah.gov

Dear Commissioners,

I am opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge you to suspend the tariff request, and require PacifiCorp to use the correct rate-changing process for these changes.

This proposal seems to be anti-solar, and would hurt the industry and companies that are promoting cleaner methods of generating electricity. I believe there is great value in what solar adds to the state and the environment. This type of change, now or in the future seems to be counter-intuitive and targeted to limit access to clean energy. It also makes it harder for citizens like me who want to get solar in the future.

Thank you for reading, and for considering the people's needs and interests, and again, I urge you to require PacifiCorp to go through the correct approval process for their request, so that it can be vetted thoroughly and so the effects can be better understood.

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

Sincerely,

Joshua William Martin, JOSHMARTIN1984@GMAIL.COM Salt Lake City UT

Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Please reject any cost benefit data submitted by Rocky Mountain Power and commission an independent analysis if you deem necessary. Note that such independent data does exist from other sources but if you choose to consider doing one for Utah I would donate to support such analysis. Please do not penalize me for Rocky Mountain Power's failure to adjust their business model to current and future energy trends and my commitment to reducing greenhouse gases.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Tyson Hoffman <tyson.b.hoffman@gmail.com>

Wed, Nov 23, 2016 at 8:49 AM

To: psc@utah.gov

We have an exciting project for our home. We've signed on financing for installing solar power on our home! Through net metering we will be able to use the excess power we make during the summer/day to pay for the power we use during the winter/night. We are going to be able to trade our power bill for 30+ years with the same price loan payment for ~20 years (worse case scenario, we will be able to accelerate this). This also allows us to 'lock in' our payment and isolates us from power inflation, which will likely rise. After that we pay nothing but the fixed \$9 charge. This reduces our dependence on fossil fuels, reduces our power bills, and is a step on the path to energy independence (You know, in case of zombies).

Rocky Mountain Power(RMP) is not a fan of this. Utility companies are monopolies that use a business model that is about profits and growth. Their investors want them to be selling more power, which means that being more efficient, or supporting residential solar is counter to that business model. Last year Nevada's power company, which has the same investor as RMP(Berkshire Hathaway), increased rates specifically targeting home solar power installations, claiming that those homes are getting a 'free ride' by relying on the power grid that they are no longer paying for. It killed the solar industry in Nevada, installations dropped by 99% and thousands of jobs were lost.

RMP is approaching you, the Public Utilities Commission with a similar proposal. They created a study looking only at costs, completely ignoring benefits, such as no long distance power transmission loss, better utilization of existing local infrastructure, reduced pollution in the valleys which already reaches unhealthy levels, and many more found by other utilities, solar power companies, and academics (33 studies here: <http://www.seia.org/policy/distributed-solar/solar-cost-benefit-studies>). My solar panels, already installed panels, and future installations will save RMP money, and benefit society.

RMP says they are purchasing solar from net metering for 2 to 3 times what they would from a large solar farm, and calls this a subsidy. This report <http://www.seia.org/policy/distributed-solar/solar-cost-benefit-studies> looks at 11 different studies, 8 show that net metering solar is more valuable than grid supplied power, sometimes as much as double. It could be argued that RMP is underpaying net metered customers. I, and I believe most other net metered customers aren't looking to get more from RMP. We just wish to maintain the existing fair net metering policy.

Please look for the benefits, already thoroughly researched by other states, which RMP decidedly left out of their study. Approving RMP's proposal will hurt Utah, we have already seen that in Nevada.

As the safeguard of the public, protect our solar industry, help RMP in its mission to supply Utah with affordable power, and deny their rate increase. Their proposal benefits only Berkshire Hathaway at the cost of thousands of Utah jobs, Utah's health, and preventing Utah citizens from contributing to a cleaner more sustainable future.

Please reject their proposal.

Thanks,
~Tyson Hoffman

Alan Sherwood <alancsherwood@comcast.net>

Wed, Nov 23, 2016 at 8:49 AM

To: psc@utah.gov

Cc: Sandra Allen <skallen55@comcast.net>

As a homeowner that wants to install rooftop solar, I would like to register my strong opposition to PacifiCorp-Rocky Mountain Power's Advice No. 16-13. Rocky Mountain Power's proposal would unfairly change the rate structure for rooftop solar customers. Rocky Mountain Power is trying to use the PSC to assist them in destroying competition from the rooftop solar industry and deprive citizens of rooftop solar as a preferred product through the use of disincentives. Look to the Nevada experience as an example and what has happened to installations there. Although it is admirable that RMP is allowing customers to purchase shares of their new solar grid facility in Utah it should not do so by taking away choice from the citizen on how to pay for electricity.

One of the key features of social policy is to provide incentives for positive behaviors, and the current rates for solar customers do this by promoting conservation and clean energy. This new policy proposal does the opposite.

RMP complains that rooftop solar is costly because of its inability to provide adequate power during peak hours and is not "grid friendly." Yet this concern will become moot in the near future as new battery technology becomes available to the consumer as early as next year. With thousands of batteries releasing stored power back to the grid during peak hours this issue can ease the demand for electricity. In the meantime, RMP should do a better job of promoting its own technology for air conditioners through the cool keeper program. If the PSC has not requested data from RMP on the penetration rates of the cool keeper program they should immediately do this before taking any action on rooftop solar rate changes. RMP should also consider increasing its financial incentive to get people to participate in the program.

The legislature indicated in previous legislation that a study be done. Now RMP is asking for a decision in absence of such a study. This appears to go against a legislative directive.

In addition to being a huge job killer in the rooftop solar industry, this proposal also hurts the coal industry. Rooftop solar, if allowed to flourish, will help reduce the burden on coal plants subject to costly updates needed for them to comply with clean air requirements.

RMP claims that rooftop solar customers are a special group that must be subsidized by the rest of the customer base. This argument has no rational basis. It is all about public relations. They act as if this proposal is only about them being fair to public, as if they have only our best interests at heart. Why is this special group being singled out? I can imagine a number of special groups RMP could also consider. How about people without programmable thermostats? Should they be penalized? Oh, that's right that group gets an incentive to convert. One of the biggest groups with a bigger impact are people who own central air conditioners. Are they not being subsidized by the swamp cooler contingent. They are simply cutting and dicing the data the way they choose to make it look like their request is a rational one.

Finally, if Rocky Mountain Power really believes it needs a rate increase, they should use the normal rate-making process instead of this shortcut.

Sincerely,

Alan C. Sherwood
3145 S Teton Dr.
Salt Lake City, Utah 84109

Note: Separate item. Another question for future reference that the PSC should ask RMP: "Why are rooftop solar customers not allowed to participate in RMP's subscriber solar program." If rooftop solar customers were able to participate it would be possible for some to get 100% of their power from solar if they wanted. When I asked this question to RMP they said that the reason that net metering customers couldn't participate was because their "billing system

wasn't set up that way." When I asked when they planned to upgrade it they said there were no plans to change it. This should be looked into also by the PSC.

Blair Thorpe <thorblai@gmail.com>

Wed, Nov 23, 2016 at 8:50 AM

To: psc@utah.gov

Dear Commissioners,

I don't think anyone would disagree that "Advice No. 16-13" would hurt solar and subsequently all of the solar companies and employees of those companies in Utah. It seems the question is more if the changes proposed by Rocky Mountain Power will hurt the people in Utah.

Rocky Mountain Power currently have a monopoly that we all have to deal with. It doesn't happen very often in the United States, but in rare occurrences Monopolies are needed. Typically areas where there is a large amount of money needed to start the business, and not enough business for more than one company. There was a large amount of money needed to set up the electric infrastructure, but we have proved that there is enough business for Rocky Mountain Power and several solar companies to survive. Do we really want to reverse this and go back to a "Pure" Monopoly?

I can tell you from personal experience that I am looking at getting solar panels. The changes proposed by Rocky Mountain Power are more than enough for me to change my mind. I can imagine that if I feel this way, that a majority of people considering solar panels will feel the same.

Do we want to make changes that will limit peoples choices for power?

Do we support Monopolies when we can have alternatives?

Do we want to do anything about our carbon footprint?

Do we want to be a State where we let large companies force out smaller businesses?

These are all questions that need to be answered, and I hope that you will realize that the changes by this Monopoly are to benefit Rocky Mountain Power, and no one else. Certainly not the people that you represent.

Thank you,

Blair Thorpe

Hey Commissioners,

I do not support and strongly oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I ask the Public Service Commission to suspend the tariff and not allow it to take effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. Why would they be allowed to punish those trying to help the planet or try another method of power? I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. If we want cleaner air in Utah then we need to allow rooftop solar to have a fair chance to make a difference.

I appreciate you allowing public input on this important issue and hope that you have heard enough to know that solar is now a viable solution for power. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Sam Woolf

I wanted to voice my opposition to
PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for solar panel customers.
I understand that solar power threatens the power companies ability to make money, but they need to find some other
way to be profitable. Placing more fees & burdens on the shoulders of individuals who are trying to find a way to save
money and use a clean renewable energy source is not fair and is not the answer.
Please don't let these huge companies steamroll the individuals in our state.
Thank You,
Susan Turner

Dear Commissioners,

PacifiCorp-Rocky Mountain Power's Advice No. 16-13 will unfairly change the rate structure for rooftop solar user. I urge you to oppose this proposal for several reasons.

First, as solar consumers we already pay a monthly charge for our share of the infrastructure and I understand that charge. However Rocky Mountain is currently charging this fee as well as capitalizing on the excess electricity I produce. They collect the excess power then charge other customers for the use of it. I receive absolutely no benefit by producing excess power. My in-laws in California on the other hand produce excess electricity beyond their needs, the electric company purchases it from them and then resells it at a higher rate. RMP takes the excess I produce and then sells it to other customers thus making money off of my excess power and taking advantage of my family. Now with this new proposal they will be able to take further advantage of my family by charging us higher rates if we use electricity. For example, each year they drain our credit from excess power on April 1. This year we have over produced a lot, yet if we have a lower production in April they will immediately charge us for any overage regardless of the fact that we will make up for that in the coming months and in fact have excess that would have covered our usage a hundred times over in the year. This is already taking unfair advantage of customers. To now try and charge solar users a higher rate is unfathomable.

Second, the environmental benefits of solar need to be considered. This unfair rate structure makes solar costs rise when we should be doing everything we can to make solar more reasonable. Punitive proposals such as this punish people for being environmentally friendly. We cannot ignore the benefits of solar for all of us.

Please vote against this proposal and help Utah become more environmentally friendly. Thank you for listening to the public.

Solar Energy for Utah Consumers

1 message

Tyler Turner <Tyler@griffiths-turner.com>

Wed, Nov 23, 2016 at 9:07 AM

To: "psc@utah.gov" <psc@utah.gov>

Hi,

I am in opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I think the Public Service Commission should suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and instead require it to use the normal rate-making process for its proposed changes.

Rocky Mountain Power is trying to increase the cost of electricity for Utahns who want to power their homes with solar energy. It has proposed new charges on consumers who choose to install solar that:

- Would be bad for business and will kill thousands of solar jobs in Utah.
- Unfairly punishes consumers who are trying to save money by using less power
- Would allow Rocky Mountain Power to take advantage of its monopoly by eliminating consumer choice, energy independence and a consumer's ability to do what they wish on their roof tops.

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. Furthermore, Solar has provided a tremendous number of clean, new jobs in our state. We should not be harming this new fledgling industry

Rocky Mountain Power has had years with the Blue Sky initiative to build out clean energy sources and has not done so. Trying to slow down solar adoption so they can catch up, by using proposals like this, goes against everything we stand for as Utah residents. Utah could and should be a leader in providing solar energy to the west, rather than trying to hang on to dirty coal to create power. Adoption at the home level is the first place to start.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

To: psc@utah.gov

Dear Commissioners,

I am writing to express my opposition to PacifiCorp-RMP's "Advice No. 16-13", and urge Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require them to use the normal rate-making process for its proposed changes.

I have been studying solar for a number of years and am about to make the capital investment in making the world a better place. Regulating pricing is not the free market and de incentives innovation and adoption of clean energy. Further more the studies I have read indicate it is actually health for the grid and system.

Further more the mean which they put this through over a holiday and with little time seems to be the exact thing the "public people" are tired of from the governing process.

Thank you for accepting public input, though the deadline should be extended.

I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Sincerely,

Keith Chandler <kc0451361@gmail.com>

Wed, Nov 23, 2016 at 9:10 AM

To: psc@utah.gov

Dear Commissioners,

My name is Keith Chandler. I am not a solar customer yet, but I have quotes from two companies that I plan on pursuing when I can pay in cash. Cost effectiveness is a very important consideration to me in choosing my energy future. The proposed Rocky Mountain Power tiered rate increases for solar customers would push the payback period for solar so far that the opportunity cost of investing in it is too high.

I am proud to live in a free country. I don't think that a public service company with a monopoly should be allowed to infringe on my right to determine my future.

Countless scientists and industrialists have contributed to making solar power ever more affordable. They have pursued it with conviction. The customers, also, have stuck their financial necks out a long way to install the systems, most with long term loans. It is not fair that a public service monopoly company can dash everyone's prospects for solar.

The rate increases would kill solar in Utah, and ripple across the country. Utah is a good place for solar. We have many solar suppliers and providers. These are new companies that have provided jobs in Utah since the recession. Utah is trying to lead out in solar. Let us not lead in squashing it.

Sincerely,

Keith Chandler

Dear Commissioners,

My name is Sam Stroman. I am a Herriman resident, and Rocky Mountain Power customer . I oppose the recent proposal from Rocky Mountain Power , "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers.

I am not a current solar power user , but I am very interested in exploring the option of powering my home using solar energy in the near future. Solar power is a HUGE win for the environment and for consumers looking to lower their energy dependence and expenses. With this penalty disguised as a rate increase, Rocky Mountain Power is trying to maintain their own revenue streams and discourage competition. This is unfair , against the principles of a free-market, and damages consumers in the end.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner , more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power , and reject Advice No. 16-13.

Christopher Holfeltz <chris@holfeltz.com>

Wed, Nov 23, 2016 at 9:14 AM

To: psc@utah.gov

Commissioners,

I strongly oppose Rocky Mountain Power's "Advice No. 16-13", filed November 9th, 2016 that would change the rate structure for rooftop solar customers like myself. Please suspend the tariff and prevent it from taking effect on December 9th as Rocky Mountain power has proposed. Just because some customers are getting power in a different manner that is cleaner - they should not be punished via higher rates.

I purchased my residential Solar to help the valley , and If I knew that something like this would have come up I would have done it differently. It is a disincentive for those looking at solar - and it has created many jobs in Utah.

Please, please reject Advice No. 16-13.

Thank you for your consideration,

My household thanks you: Chris Holfeltz, Cody Holfeltz, Jessica Larson, and Torren Holfeltz.

Wed, Nov 23, 2016 at 9:14 AM

To: psc@utah.gov

Dear Commissioners,

Thank you for providing me this space to express my thoughts and feelings concerning Rocky Mountain's Power proposal which would seriously dampen more rooftop solar in Utah.

Utah is one of the best states in our country for developing solar energy. We therefore have a responsibility to our country to produce as much solar energy as possible. Our country needs this for its economic well being, its national security and its role in curbing global warming.

Rooftop solar is one of the best tools in the solar energy toolbox. RMP is being extremely short-sighted and protective of their own interests. We need to think of the bigger picture. Please suspend the tariff and prevent it from taking effect on Dec. 9. Please do all you can to encourage roof top solar

May we all help create the energy future our grandchildren will need for a livable planet.

Thank you for considering these concerns,

To: psc@utah.gov

Hello Commissioners,

As a home owner, lifelong Utah resident, and community member who is looking forward to having roof top solar in the near future; I oppose the recent proposal, Advice No. 16-13 from Rocky Mountain Power. This was filed Nov. 9, 2016, and states that it would change the rate structure for rooftop solar customers.

I believe that our grid system can help to spread roof top solar around to all as a community . This shared sun power, which in Utah is plentiful, will help clean our heavily particulated air , make a healthier environment for us to live in together, and make us all closer as a commu nity.

I urge the Public Service Commission to suspend the tariff f and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is **unfair** for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . I am deeply concerned about the future of our planet, and our local communities. I believe solar gives people access to a cleaner , more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power , and reject Advice No. 16-13.

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power , "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner , more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

I have spent the last 3 1/2 years working in the solar industry and the future of solar in Utah has a direct impact on my financial stability . Solar is not only something that I believe in deeply, it's also a means of survival for me and many other great people that I work with. Please consider this greatly when making your decision.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power , and reject Advice No. 16-13.

Sincerely,

Judson Sacco

To: psc@utah.gov

Dear Commissioners,

Thank you for accepting public input on this important issue. I strongly oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, changing the rate structure for rooftop solar customers.

I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I own an affordable housing condominium on which I installed six solar panels. I contribute more power to the grid than I consume and RMP is able to sell my power to others. My solar input credit even expires each March and they continue to use my power toward others.

RMP is interfering with the market in protectionist tactics to create beneficial outcomes for RMP. It's a poor argument to a false argument that their regular pay customers are paying for my rooftop solar expenses in their fees.

Rocky Mountain Power should not raise rates for customers who wish to use rooftop solar. Solar gives people access to a cleaner, more reliable source of energy and provides more clean power for RMP to sell, en lieu of coal for electricity generation.

I respectfully request that you put the interest of the entire state and it's citizenry first and foremost and reject Advice No. 16-13.

Sincerely,

Jen

Mia Bailey <solarflare78@gmail.com>

Wed, Nov 23, 2016 at 9:33 AM

To: psc@utah.gov

To Whom it May Concern

I am deeply opposed to Rocky Mountain proposed tariff on rooftop solar in the state of Utah. Tariffs are expressly meant to discourage certain practices and rooftop solar is not only a popular but provides direct benefit to our state and valley and I believe strongly that this tariff would actively discourage consumers from installation and purchase of rooftop solar.

Utah is in a prime position to use solar and lead the way in a new consumer technology - tariffs on the industry will hamper our leadership in this new business venture in the west. I have heard many lawmakers state that it's time to "take the training wheels off the solar industry" and allow the industry to thrive on its own: however the oil and gas industry receives millions in tax breaks and credits and is an established highly profitable industry . The solar industry deserves support from our legislatures and consumers are very interested in this popular technology.

I urge all members to oppose any Teri's against the solar industry or the manipulation of rates for rooftop solar owners as it intentionally attempts to hike the industry and disenfranchise lower income households from using solar .

Thank you for this opportunity for public comment.

Sincerely

Mia Bailey

Dear Members of the Utah Public Service Commission:

I am emailing today to voice my concerns re: the recent proposal put forth by Rocky Mountain Power re: solar use. My husband and I are active members of the community, voters and homeowners here in the Salt Lake Valley and we are soon to be first time parents. I work in medicine and my husband in the snowsports industry . Both of us are concerned about the impact of non-renewable energy on our local environment, recreation, economy community, the public health and the health of our soon to be newborn child. We are writing today to state our opposition to PacifiCorp-Rocky Mountain Power's Advice No. 16-13 and believe that this puts an undue burden on rooftop solar customers. We are not yet solar customers but are really excited to institute this soon in order to help reduce the impact of other energy sources on our environment. We are asking you to suspend the tariff and prevent Rocky Mountain Power's proposal from taking effect on December 9th and suggest instead that Rocky Mountain Power use the normal rate-making process. We believe that the proposed unreasonable rate increase will harm solar business, employees of these companies, stifle small businesses and harm the environment. We all are well aware of the consequences of our poor air quality in the valley and recognize that a transition to more renewable sources can help mitigate this damage. Please support those of us who are attempting to do our part to help. Please continue to consider the environmental benefits of solar power. Thank you so much for being willing to listen to the public during this public comment time.

Best,

Joanne and Eric Rolls

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

I am writing because I oppose the proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. Public policy should encourage progress, not go in the wrong direction. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

Just because Rocky Mountain Power has power and money (and a monopoly) doesn't mean they can use this power to hurt the little guy. We should all be concerned about the environment. Our air quality in Utah is bad. We should be setting the standard, not lagging. Solar gives people access to a cleaner, more reliable source of energy. As I said before, Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Ben Peterson

gdpsmp@comcast.net <gdpsmp@comcast.net>

Wed, Nov 23, 2016 at 9:38 AM

To: psc@utah.gov

Cc: gdpsmp@comcast.net

Dear Commissioners,

I am writing to state my opposition to PacificCorp-RMP Advice No. 16-13 filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. In particular I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed. I request that they are required to use the normal rate-making process for its proposed changes.

I became a rooftop solar user for two very important reasonsThe 1st being my desire to use renewable, clean energy and preserve our resourcesThe second was my desire to be more self sufficient and reduce my costs for my family in this very difficult financial time. I feel that it is unreasonable for RMP to be allowed to raise the costs for new rooftop customers, restrict free trade, and limit access to clean and efficient energy. These proposed rate changes would remove the incentive for individuals to utilize solar powerThis, in my opinion, is blatantly unfair and a restriction of individuals to exercise their choice of power source and capitalize on our investment. I am also very concerned at the timing of this request, making it in such a short notice and time when the public would not have time to respond and appropriate studies and public input be made. Seems like very good business planning on their part but unfair for the public. I strongly request that the Dec. 9th date be rejected.

I have read studies and articles from other regions where rooftop solar has been a value to the power system and grid. I feel strongly about the public's right to benefit from choices to utilize this clean energy source and a reduced cost.

Thank you for accepting public input and please extend the deadline of this out of process rate adjustment.

I respectfully request that the PSC, in the interest of ratepayers and the Utah public reject PacificCorp-RMP's current rate change request.

Sincerely,

Bradley Pratt <pratt.bradley@gmail.com>

Wed, Nov 23, 2016 at 9:40 AM

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed November 9, 2016, that would change the rate structure for rooftop solar customers. Rocky Mountain Power's proposal should be prevented from taking effect on the 9th of December and Rocky Mountain Power should be required to use the normal rate-making process.

I believe that the proposal is unfair to Utah ratepayers that choose solar power as a option. It is anti-competitive and will hurt the choice of Utahns into the future. Utah has some of the worst air quality especially in the Salt Lake Valley and solar could be a part of the solution to the problem; however, rather than compete with environmentally friendly policies and improvements in Solar Rocky Mountain Power has chosen to try and eliminate competition through unfair and unfounded rate increases. I believe that solar is a important part of the future of Utah and as a ratepayer in Utah I am deeply concerned about the damage this proposal could do to the environment and the booming solar industry that has created thousands of jobs here in the state of Utah.

Thank you for accepting my input on this important issue. I hope that you can put the interest of Utah, the Utah public, and ratepayers above the interests of Rocky Mountain Power by rejecting Advice No. 16-13.

Sincerely,

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power , "Advice No. 16-13", filed Nov . 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner , more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power , and reject Advice No. 16-13.

Sincerely,

Jeremy Woodard, jlwoodard20@gmail.com, Saint George, UT

Dear Commissioners,

I oppose the proposal from Rocky Mountain Power , "Advice No. 16-13", filed Nov . 9, 2016, that would change the rate structure for rooftop solar customers.

I recently installed solar panels and I believe that Rocky Mountain Power should be required to use the normal rate. It is going to prevent future solar installations if Rocky Mountain Power can raise rates for just those customers. Utah uses mostly coal for power and every solar installation improves our air and reduces carbon emissions. Rocky Mountain power is not looking out for the common good, it is only looking to increase its profits at the sacrifice of the environment.

You must put the interest of the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Mary Richardson, onlymary@gmail.com, Salt Lake City , UT

To: psc@utah.gov

Dear Commissioners -

I'm writing to let you know that I strongly oppose "Advice No. 16-13" from Rocky Mountain Power.

Government should primarily serve the people to protect the citizen's choices and liberties. Letting power companies increase their own profits by punishing alternative energy customers is unfair.

Solar energy has the potential of protecting the environment, reducing strain on the power grid, and letting citizens have more choice in how they live; but only if the Utah Public Service Commission acts to protect the public instead of lobbyists from Rocky Mountain Power.

Thank you for your consideration,

Shane Westra

Wed, Nov 23, 2016 at 9:47 AM

To: psc@utah.gov

Dear Commissioners,

I vehemently oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Furthermore, allowing a monopolistic enterprise like Rocky Mountain Power to influence the government's responsibility to work in the best interest of its citizens for financial gain is unethical. It will set a horrible precedent that, if followed, will negatively impact not just Utah, but the country at large. The solar industry is rapidly growing and the environmental benefits are going to be felt exponentially over the next several years. Throwing a wrench in that progress now could be disastrous. Utah has an opportunity to lead by example and I urge you to consider the economic and environmental ramifications of this decision.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Leslie Baker <lesliearb@gmail.com>

Wed, Nov 23, 2016 at 9:52 AM

To: psc@utah.gov

Dear Commissioners,

Please extend the public comment period on the proposed RMP rate hike for home solar users. I feel like this is being rushed through and we have all not had time to review this properly. The normal rate making process should be required.

My husband and I are opposed to PacificCore-RMP's advice #16-13, please suspend the plan that they want to take effect on Dec 9th.

I feel that those of us that have made the sacrifice to invest money upfront to install solar on our homes are being shortchanged. By installing solar everyone is benefited: in cleaner air, energy that RMP gets back that can be used for others, and RMP can be saved the expense of building more infrastructure to produce more power itself. If anything more solar should be encouraged. The rate hike will only serve to discourage others from installing solar if its harder to make back this initial cost. This in turn will hurt the solar energy industry economy in our state. We all need to be working for cleaner air. You cannot put a price tag on that - we are suffering even as we debate this important decision.

Sincerely,
Leslie Baker

Reply-To: Brandon Mahana <bgmahana@yahoo.com>

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

It has been brought to my attention that Rocky Mountain Power has proposed rate increases for rooftop solar customers. This is highly discouraging. Many solar customers have shifted toward renewable energy because they care about our planet, and they care about reducing Utah's contribution of carbon emissions to the world-wide climate-change crisis. Solar customers want to "do their part" in the fight against climate change, and they should not be punished for it--in fact, more citizens should be encouraged by our government to follow these solar customers' lead. If punishment via tariffs must occur, then let it be on the heads of fossil-fuel customers via a carbon tax. ~~We~~ should ALL shift toward renewable energy. This shift should have happened a decade ago, and kicking this can down the road is detrimental to our well being and the well being of the world in large. Please do not ignore the scientific community's warnings and the extremely important and urgent need to shift away from fossil energy.

The following sample letter was emailed to me, and I am using it here because I agree and support its message and plea. Furthermore, this sample letter contains details that may be important to Utah commissioners so that my protest can be formally noted and documented. Thank you for your time.

I oppose the recent proposal from Rocky Mountain Power, Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Aaron Burgemeister <aburgemeister@gmail.com>

Wed, Nov 23, 2016 at 9:54 AM

To: Utah Public Service Commission <psc@utah.gov>

To Whom it May Concern:

My name is Aaron Burgemeister and today I became aware that, just two weeks ago, Rocky Mountain Power (RMP) proposed a rate change for solar owners in their territory. I also found out that the public comment period for this ended yesterday, in the middle of a holiday week, after fewer than two weeks of notice. Finally, if I understand correctly, the rate change for solar owners in their jurisdiction could change within a month of the initial submission, which seems incredibly fast and ill-timed.

The underlying problem with RMP's proposal is that it targets a fraction of a percentage of consumers while ignoring at least one larger problem of subsidization of many more users who are simply users of low power. That there are fixed costs to maintain the entire grid is understood; that these fixed costs are fixed on a per-household basis is also understood, and already those who use solar are paying fees on a monthly basis for a connection to the grid, not to mention initial application fees, and the like. Now, because RMP also subsidizes low-power users by those who use more power, they are claiming that those with solar are unfairly benefiting, just like those who simply use less power are benefiting, from lower rates due to lower usage.

If fixed costs exist, it would be fairer to simply pass those on to users of the system as they exist; if the total cost of the system is \$100 million, and there are 10 million users, then the fixed cost per connection would be \$10, and that portion of the energy cost to consumers could be removed entirely. There would likely be a need for some provision to continue a subsidy for low-income households, but it could be a subsidy based on established norms in our society, rather than an arbitrary run around the system in order to target a tiny percentage of users.

RMP's questions and answers site conveniently puts in numbers that support their position but which leave out most of the compelling evidence contrary to their goal, numbers such as the percentage of users in their system who have solar, or the total number of users in their system. If provided, it would probably be clear that while their "exponential growth" has been real over a statistically weak three years, it is also still miniscule compared to the total number of low-power users, who all deserve to have the same benefits for low power usage, namely lower bills.

Their site also provides some interesting contradictions, again where convenient to suit their purposes. The growth is "exponential", though the projected growth in 2017 is not, perhaps because they expect their docket to be approved and the rates to change. They also claim that this change will not hurt solar, when any person with a calculator can see that it directly impacts the ability, with or without government incentives, for folks to invest in solar in a way that pays for itself reasonably. They conveniently ignore any discussion of how their rates work, and how many low-use users there are outside of those with solar, which if like other parts of the state, is probably a percentage in the neighborhood of 25% of all users. They also point out that it is now possible, through them, to purchase clean energy from new solar farms without needing solar panels, which is probably going to the heart of the issue: they want their investment to pay for itself, just like solar owners want theirs to do the same. They claim that they are not doing this to help their bottom line, but instead that, because of the change, "The savings are passed on to all the other customers.", ignoring common sense and common accounting practices; again, lacking any real information, they can claim whatever they want and the uninformed public can either believe or not, and common sense should make it clear that their statements are only true with a collection of asterisks for missing footnotes describing the requirements for their truthfulness.

At the end of the day, RMP is attempting to implement a policy change through a correction in their own bad handling of fixed and variable costs, and appear to be doing so in a way that can only benefit their bottom line. Doing so at the time they did, and in the way they did, at least hints that they anticipated the feedback they would get and their attempt to minimize it. While the problems they outline of fixed costs needing to be covered probably exist, the way to fix them is not to appeal to the government for a change that targets a fraction of users while ignoring the real problem. A proposal to fix the real problem could still be made, and could still have the same result, but without targeting a small group that,

until recently, was encouraged to behave as they did by the same organizations now attempting to stop them.

Thank-you for your time,

Aaron Burgemeister

To: psc@utah.gov

Dear Commissioners,

I am writing because I oppose the proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. Public policy should encourage progress, not go in the wrong direction. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

Just because Rocky Mountain Power has power and money (and a monopoly) doesn't mean they can use this power to hurt the little guy. We should all be concerned about the environment. Our air quality in Utah is bad. We should be setting the standard, not lagging. Solar gives people access to a cleaner, more reliable source of energy. As I said before, Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Ben

Dear Commissioners,

I strongly oppose the proposal that was recently submitted by Rocky Mountain Power as Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. As I understand this is not how rate structure changes are handled. As far as I know we have never had a change in rates put into place this quickly as an intermediary to the proposed change such as what was proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

If this rate structure were also put into place for others who use "less power" such as low income families or elderly individuals it would also increase their bills dramatically. It is not fair to put this type of rate structure in place for one customer class and not others. The proposed rate structure is far too aggressive and extreme.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

Sincerely,

Tyler Gerber, tyler.gerber@blueravensolar.com, American Fork, UT

Dear Consumer

You have sent an electronic mail to the Division of Public Utilities. However, the scope of the agency at this capacity is the Informal Complaint process which is to enforce uniform residential utility service practices and procedures governing eligibility, deposits, account billing, termination, and deferred payment agreements.

Because your complaint pertains to a topic currently being evaluated by the Public Service Commission under an open docket(s) (14-035-114, and/or 16-035-T14), I can forward your comments to the Commission to be submitted under this docket, and suggest that you monitor any upcoming proceedings at www.psc.utah.gov.

Respectfully,

The Utah Division of Public Utilities

----- Forwarded message -----

Subject: RMP RATE INCREASE

Dear Division Director,

For the fate of the positive Solar changes we have seen in the last few years, PLEASE REJECT Rocky Mountain Power's proposal to increase rates to Solar Customers!!

Rocky Mountain Power's initiatives are to slow down the positive changes that solar is having on our power infrastructure, leaving them in more power to be in control of the future. In fact a MONOPOLY afraid of the future!!

Any costs Rocky Mountain Power says they are incurring more from solar customers is false. With more Solar Customers than ever before, KSL reported on October 8th that...

“The Utah Public Service Commission on Thursday approved a \$15.6 million decrease in Rocky Mountain Power's customer electricity bills. Overall, rates will decline 0.8 percent or about \$6.84 in annual savings for a typical Utah residential customer .”

Why the decrease????

“The commission approves customer prices based partially on the expected costs of fuel and electricity purchases, with rates adjusted after determination of whether the actual costs rise or fall. The decision comes

after the utility achieved lower fuel and electricity purchase costs than previously forecast, a news release stated.”

The cost of electricity has decreased because of Solar Customers NOT increased the demand and costs!!!

Please continue supporting the positive changes the Solar Industry is having on our nation by voting against these rate increases to Solar Customers!!

Best Regards,

David Scott

Dear Commissioners,

As rooftop solar owners, we are very much opposed to PACIFICORP-RMP'S Advice No. 16-13, filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular , urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

We debated about going solar for weeks. What tipped the scales for us was a story on KSL about the effects of drawing water off to create hydroelectric power on wildlife downstream. We decided then to move forward, trying to do our part in saving water and protecting wildlife.

We would be adversely affected if this request is allowed to move forward unchallenged because as new solar owners, we are not yet seeing the cost benefits of going solar versus our monthly payment on our solar installation and equipment purchase.

Considering that we live in the second driest state in the country , and that we have had several very dry seasons, it seems counterproductive to "punish" those of us seeking renewable energy , because we care about our environment and wildlife, by imposing more costs upon us, in addition to the investments we have already made.

Thank you for your consideration of our concerns.

Dear Commissioners,

I deeply oppose the recent proposal from Rocky Mountain Power , "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process. If this should be allowed then I cannot see the purpose of having installed these solar panels on my roof and I see it as a deterrent for others to install the solar panels as well. I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of not only our planet but more for our city and state as well, being rated as having the worst air in the country! I believe solar gives people access to a cleaner , more reliable source of energy . With all of the talk about how can we improve our air quality here in our valley , this seems to be a huge start in a remedy for our air pollution problem. I have seen so many ad's about Utah offering people rebates, etc. to install rooftop solar panels and now we have, Rocky Mountain Power is wanting to take the advantage of having it away by changing their rate structure for those that installed it. This is your opportunity to prove to the tax payers of this state that you are truly concerned as well for our air quality and take this giant step to help all of improve it!!!

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power , and reject Advice No. 16-13.

To: psc@utah.gov

To Whom It May Concern,

I am writing to discourage Rocky Mountain Power hiking rates on net metering for solar customers. Not only do I want to support the Companies (such as the one my husband owns Salt Lake Cement Cutting) for giving back responsibility and installing Solar panels, but being an outdoor enthusiast want to do my part in contributing to the Clean Air Act. I plan on installing them on my home. The natural beauty that Utah holds is what makes this state so great, by punishing members of this state to do their part to keep it clean but installing solar would be a disgrace and disappointment to all those involved.

Dear Commissioners,

I strongly oppose the recent proposal from Rocky Mountain Power , "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

As a small business owner who helps solar companies nationwide grow and sustain operations and sales teams, I am deeply concerned that allowing this proposal to go through will not only slow job growth in the state of Utah but will also create lay offs of many employees who rely on green energy careers to care for their families. This proposal not only will hurt the environment but will also hurt the Utah economy . For that, Rock Mountain Power executives should be ashamed of themselves.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner , more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution. Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power , and reject Advice No. 16-13.

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I believe that this would unfairly change the rate structure for rooftop solar customers. The air quality in Utah is terrible, and it's not fair to negatively impact those who are trying to reduce their carbon footprint and make Utah a cleaner, healthier place to live. It also is not fair that RMP wants to farm out solar to their customers, but prevent others from doing it their self. RMP is owned by the same company that owns the Nevada Utility and should not be allowed to monopolize the energy industry.

I suggest that RMP use the normal rate-making process, and I ask that the commission suspend the tariff and prevent RMP's proposal from taking effect on Dec. 9th. I would ask that you please consider the environmental benefits that solar brings to our beautiful state, and the many start up solar companies that will also be impacted due to this tariff. I appreciate you taking the time to read and consider my request.

Sincerely,

Carissa Ray

Wed, Nov 23, 2016 at 10:11 AM

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

I'm emailing you to express my concern with the new net metering rate change proposed by RMP.

I urge you to think of the future and how everyone pictures a clean planet where we pitch in to help each other and we have the right to have freedom from monopolies.

December 9th is too quick to put something like this into effect. Even worse is to force those that get solar after December 9th on to a new net metering plan that hasn't been decided yet.

If you had the opportunity to buy a house at a good price but it will possibly become 2X as expensive in 6-7 months and you have to pay the new cost, would you buy that house? No one in their right mind would!

Please take time to review the new net metering proposal and let those that get solar before that time be grandfathered into the original plan.

Thank you.

Docket #16-035 T14 Public Comment / V ote No on the Solar Rate Change!1 message

Christopher B <bondtifferbond@gmail.com>

Wed, Nov 23, 2016 at 10:13 AM

To: psc@utah.gov

To Those on the Public Service Commission who represent myself and all other Utahns,

I (and on behalf of my entire family) oppose Rocky Mountain Power's Advice No. 16-13. I've spent time reviewing the proposal. After looking at the pros and cons on both sides, I believe that the proposal would unfairly change the rate structure for rooftop solar. Rooftop solar is something we should be encouraging—not discouraging, as the rate change does--especially consider the changing weather, our often dirty air, and other environmental factors which solar helps alleviate.

Yes, I understand PacifiCorp's belief that they are paying for "free-loader" solar users by still having to maintain solar user's base load. But home solar users also de-stress the grid during peak afternoon hours (especially in the summer when AC takes up a bulk of the energy consumed), saving RMP substantial sums of money . And in any event, even a slight financial burden on the rest of users (like me) without solar, is worth the cost of moving toward a cleaner, more sustainable power future.

I urge you to listen to my voice, suspend the tariff, and prevent RMP's grossly unfair proposal from taking effect. RMP should continue to use the normal rate making process so solar can continue to grow in our state.

Thank you for seriously considering my voice—and the voice of all the others who oppose this rate increase. We expect you will look out for Utah's best interest moving forward rather than for minuscule financial gains for a corporation which holds a monopoly over our electricity .

Best,

Christopher Bond, bondtifferbond@gmail.com, Sandy, Utah.

Dear Public Services Commission –

I am a faculty member at the University of Utah. I have long made efforts to live in such a way that I consider environmental issues when I make decisions in many areas of my life. My husband and I participate in the Rocky Mountain Cool Keeper program in addition to making sure our home is as energy efficient as possible. We were planning to add solar panels to our roof until we heard about your proposal

I am writing today to express my opposition to PacifiCorp–Rocky Mountain Power's Advice No. 16–13. This rate change would make it cost prohibitive for us to add solar to our home, a step backwards in our efforts to be part of the solution to reducing our ongoing air pollution problems here in Salt Lake. We ask you to suspend the tariff and prevent Rocky Mountain Power's proposal from taking effect on December 9, as it unfairly changes the rate structure for rooftop (or potential) rooftop solar customers such as ourselves.

As we all know, air quality in Salt Lake is an ever growing problem. We have lost good candidates for our College here at the U of U due to the quality of air in our valley. This is not the reputation that Salt Lake wants to have for tourists or potential new residents of our state!

Thank you for your willingness to listen to the voices of the people you serve both now and the generations to come. If you would like to contact me further please do so at:

[801-581-3071](tel:801-581-3071) – Salt Lake City resident.

Thank you –

Docket # 16-035-T14 Public Comment

Dear Commissioner s,

I am opposed to PacifiCorp's Rocky Mountain Power's 'Advice No. 16-13' filed November 9, 2016. This rate increase should follow normal rate making process. Please do not impose the Tariff scheduled to take effect on December 9th.

We deserve the freedom to choose the type of energy that runs our homes and business. This rate increase would make it hard or economically unfeasible to have a solar collection system. This is especially important to my projections of a retirement on fixed income. To have a solar system allows me to stabilize my future utility costs which is important to me. Rocky Mountain's rate proposal may deny me the benefit of having solar power.

Other states as Nevada have enacted similar rate increases and it has devastated the solar industries there. We need to promote solar energy as a part of the business sector of our economy. The rate increase will do great harm to the solar industry. We need power systems that are diversified with a number of options for individuals to choose from to match their individual and business needs.

It is also true that to impose a rate increase as this is akin to taxation without representation. We fought a war against this type of action when our country was created.

Thank you for accepting public input. Please reject PacifiCorp's Rocky Mountain Power's current rate change request.

Kent R. Baker

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution. I also believe that competition in the solar/energy industry has a positive impact on the economy. Allowing Rocky Mountain Power to have more or less a monopoly on power in the state of Utah would affect our economy in a negative way.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Cassandra L. Andersen, cassandralinda93@gmail.com, Morgan, UT

To: psc@utah.gov

Dear Commissioners,

As a concerned citizen of Utah, I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

These actions of Rocky Mountain Power should not be allowed. They simply should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy.

These changes proposed by Rocky Mountain Power affect many and will tend to discourage individuals from using and installing alternative energy systems in their homes and businesses.

I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

To: psc@utah.gov

1Dear Commissioners,

I would like to voice my opposition on the recent proposal from Rocky Mountain Power "Advice No. 16-13", filed on November 9, 2016 that would change the rate structure for Solar customers. I strongly urge the Public Service Commission to suspend the tariff and not allow it to take place on Dec. 9th as RMP has proposed. Rocky Mountain Power should be required to use the Normal rate making Process.

I feel that if Rocky Mountain Power is able to raise the rates for Solar customers, that it will prevent customers from being able to do their part in helping to save our planet. Solar Power is one of the many ways that we can help to cut down on pollution on this planet. In my opinion, Rocky Mountain Power only has the interests of their pocket books in mind and not the needs and future of our planet. Utah's Air Quality is at it' s worst and needs to improve and the only way to do so, is by using renewable energy sources, such as solar .

Thank you for accepting public input on this issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and Reject Advice No. 16-13.

Sincerely,

Eric Willden, Skibum173@yahoo.com, Tooele, Utah

Reply-To: Shelley Reynolds <shelleyutah@yahoo.com>

To: psc@utah.gov

Dear Commissioners,

First, thank you for your time to hear my input regarding Rocky Mountain Powers request to implement a rate structure to solar customers.

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016.

As a rooftop solar consumer, it is frustrating to hear RMP is trying to reap additional profits from those of us that have opted to go with rooftop solar for our energy source. Solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs dire improvement, and I believe rooftop solar should be part of that solution. Not to mention, for some of us, this is a money saving tool; RMP needs to remember not everybody makes a six-figure salary and he's hurting those of us working hard to enjoy a decent life.

I urge and beg the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9th (as Rocky Mountain Power has proposed). Rocky Mountain Power should be required to use the normal rate-making process, not some ill-conceived rate structure of their own.

Again, thank you for your time and accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Shelley Reynolds

To: psc@utah.gov

Dear Commissioners,

I am opposed to PacifiCorp/Rocky Mountain Power's advice No. 16-13. As a rooftop solar customer, their rate structure would unfairly change my rates. It makes most sense for them to use the normal rate-making process.

Please suspend the tariff to prevent their proposal from taking effect. We have gone to great personal cost to install a solar panel rooftop system that is beneficial to the environment. The air quality in Utah is terrible and this is one little help that we have done to contribute to better air for us and others. Please don't punish us for doing something that is better for everyone. These solar panels are a step forward in decreasing the drain on our limited resources and should be encouraged, not discouraged by unnecessary rate hikes.

Thanks for your time and concern,

Reply-To: rshosted@gmail.com

To: psc@utah.gov

I wanted to voice my concern for Rocky Mountain Solar Rate change proposal. I do not believe this is prudent for Solar and clean energy initiatives. Furthermore, by raising the return costs on solar panel system, it puts of the return on investment so much that it will make home owners and businesses less incline to switch to clean energy . This has a direct effect on our beautiful state and residence. I urge you to decline this request from Rocky Mountain Power .

Please deny Schedule 126 and its related schedule 5 tariff.

Thank you

Daniel Gann <dandgann@gmail.com>

Wed, Nov 23, 2016 at 10:29 AM

To: psc@utah.gov

Public Service Commission,

Rocky Mountain Power's recent rate proposal feels, to me at least, like a sneaky way to try to maintain their favorable position as primary provider. Solar companies (I have family and friends working in 3 different ones here in Utah) all see this as a direct attack and would, if enacted, essentially stop their businesses inside our state. That would be a shame since I, and many others, see solar as both an economical alternative to Rocky Mountain Power and an environmentally friendly move as well (especially as we enter the inversion season here on the Wasatch Front). I would have solar panels on my own house right now if I didn't have so much shade.

As I understand the argument put forward by RMP they claim that the price they're paying net metered customers for their power is too high because of the fluctuation in demand throughout a normal day of usage. The "fairness" issue seems like it could easily be solved (and much more fairly it would appear) if RMP simply created an *accurate* price per kWh which fluctuated with the demand. Thus *every* customer would pay or receive credit at an accurate rate whether they were putting into the system or taking out.

When I first heard of the proposal I immediately thought of my monthly "Home Energy Report" that RMP sends me encouraging better economy. I thought, "So if I *really* start saving by going solar, I can expect them to not be so happy any more." It didn't make sense.

Any way. Thanks for your time. Please carefully consider how "fair" the proposed change would be to all those who are looking for an alternative to RMP.

Thanks,
Dan Gann

I was so disappointed when I heard of this! I so fervently feel a part of the effort to help improve the Wasatch Front's air quality that I feel this legislation would not be in our best interests.

My wife and I have invested in rooftop solar as well as recently buying an electric car for driving around town. We need to help support this growing industry since it will be the future.

This legislation would also have negative effects on business since it would put many out of work in a growing industry .

Let's think hard about the consequences of passing this. We could be leaders in this industry since we excel in available sunshine. And many would look up to Utah for its example.

Commissioners,

I am opposed to PacifiCorp-Rocky Mountain Power's Advice No. 16-13.

I have installed solar panels on my home to do my part in helping keep our air clean.

I believe all of your actions should be geared towards the citizens being able to breathe clean air here in the Salt Lake Valley. Rocky Mountain's proposal would unfairly change the rate structure for future solar panel owners discouraging citizens doing what they can to help clean up the air .

Rocky Mountain Power should use the normal rate making process and I'd like you to suspend the tariff from taking effect on December 9.

Their proposal is self serving, not citizen serving.

Thank you for considering my input in your decision making.

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers.

I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

To: psc@utah.gov

Dear Commissioners,

I am writing to urge the Public Service Commission to reject the recent proposal from Rocky Mountain Power, "Advice No. 16-13," filed 09 November 2016. This is the proposal changing the rate structure for solar customers. I would like the PSC to suspend the tariff and prevent it from taking effect on the proposed date of 09 December.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who use rooftop solar. I believe they are overstating the costs to themselves while minimizing the economic benefits they receive from the energy produced and the reduced stress on high-tension lines and other long-distance distribution channels. I also believe that solar gives people access to cleaner, more renewable, and more sustainable sources of energy. There are areas in Utah with air quality problems, and rooftop solar is one element of the solution to combat our bad air.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

I oppose Rocky Mountain Power raising the cost for roof top solar.

- In years past they have expressed concern with the growth and how their older infrastructure would handle it. Bad adding solar it will relieve the load.
- Solar is a longer term solution to our environmental issues.

Thanks,

Josh Williamson <joshwill08@gmail.com>

Wed, Nov 23, 2016 at 10:42 AM

To: psc@utah.gov

To whom it may concern,

If there is one thing I am proud of Utah for, it would be the transformation our state has recently undergone with businesses. Over the past decade, Utah has paved its way to be coined "Silicone Slopes" and even heard that Madison Avenue has moved here. Essentially, Utah has done an amazing job at growing its economy.

I fear that should Rocky Mountain Power's Advice No. 16-13 would unfairly change how rooftop solar customers are charged and have a large impact on the solar industry here in Utah. In a state where we pride ourselves on our homegrown companies that pave way for the future, it is surprising to hear that Rocky Mountain Power's proposal is seriously being considered since it will negatively effect many people within the solar industry that work in Utah, not just Vivint Solar.

I ask that the Commission suspend the tariff and prevent Rock Mountain Power's proposal from taking effect on Dec 9 of this year. Having spent the past three years within the solar utility industry, it still makes sense for Rocky Mountain Power to continue to use the normal rate-making process.

Lastly, I want to discuss the inversion that hibernates in our valleys every winter. It's clearly an issue with a lot of public concern:

<http://www.sltrib.com/home/3524088-155/utahs-air-is-the-worst-its>

This is not a healthy environment for anyone. Solar can help clean the air, but it is not an overnight fix. This is something Utah needs to actively work on so it can be fixed. It will take time, but surely the public health is something to consider. Rocky Mountain Power's actions will certainly deter efforts to help resolve this problem.

Here is a link to a page with multiple stories and reports concerning air quality in Utah:

<http://www.ksl.com/?nid=1314&title=air-quality-report>

Thank you for taking the time to hear me out. I am aware you are all very busy but I sincerely do appreciate your time and consideration.

Wed, Nov 23, 2016 at 10:45 AM

To: "psc@utah.gov" <psc@utah.gov>

I oppose the PacifiCorp-Rocky Mountain Power's Advice NO. 16-13 because it would unfairly change the rate structure for rooftop solar customers. I ask the Commission to suspend the tariff and prevent Rocky Mountain Power's proposal from taking effect on December 9 and that Rocky Mountain Power use the normal rate-making process.

Rocky Mountain Power should not be allowed to unreasonably raise the costs for new rooftop solar customers because it not only benefits the customers financially, it is better for the community, the city and the environment. We should make it easier for our community to use clean, renewable energy. It seems ridiculous to me to raise rates on something that is mutually beneficial for the people and for our land. The commissioners should consider the short and long term benefits of going solar for the individual and the community.

Raising the rate for customers to go solar also effects jobs because there is a huge market for solar jobs, especially in Utah. Not only my job, but this industry is growing, because the future is clean energy, there will be a greater need for employment in this industry.

Thank you for being willing to listen to the public, this is what democracy is for.

To: psc@utah.gov

Dear Commissioners,

I'm writing to strongly oppose the Rocky Mountain Power proposal, "Advice No. 16-13". I believe the proposed rate structure change for solar customers is bad policy which will impede important environmental and economic progress for Utah and for the wider world.

As a current rooftop solar consumer , I urge the Public Service Commission to suspend the proposed tariff and prevent it from taking effect on December 9. Please require Rocky Mountain Power to use the normal rate-making process.

I believe it is unwise and shortsighted for Rocky Mountain Power to raise rates for new solar customers. It would also be unfair to raise rates so precipitously .

Solar is a cleaner , more reliable source of energy than any of our older, fossil fuel based systems. It is vitally important that we encourage solar's expansion through wise public policy . Investment in residential solar is one of the best ways we have to positively impact the Utah's air quality and create an energy future that is renewable and sustainable. We urgently need utilities and public officials to incentivize residential solar investors, not create new barriers for those who wish to come on board.

A stable and reliable rate structure was an important factor in making rooftop solar an affordable option for our home. Please stop Rocky Mountain Power from enacting policies that will keep others like us from investing in Utah's future.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power , and reject Advice No. 16-13.

Sincerely,

Justin Ivie, justinivie@gmail.com , Salt Lake City , UT

Wed, Nov 23, 2016 at 10:46 AM

To: "psc@utah.gov" <psc@utah.gov>

Cc: Colby Gale <colby.gale@blueravensolarcom>

Utah Public Service Commission-

I want to write to you my concern regarding PacifiCorp-Rocky Mountain Power's Advice No. 16-13. I want to strongly suggest as a government elected body by the people, that you fully investigate this unfairly change in the rate structure for rooftop solar customers.

It is a world known crisis as stated in the recent Paris Agreement where 195 countries determine and work for methods to reduce the amount of greenhouse gas emissions. The science behind climate change is supported by NASA and 97% of climate scientists. This is the major issue that we as the leading developed country in the world need to focus on and help lead the way on sustainable and renewable energy.

As a resident in Lehi Utah, I am effected by the amount of pollution that is trapped in our valleys. I recently moved from Los Angeles to Utah last year and can already point out that the winter sky here and pollution is far worse than any area in LA County. This is something that you as a Public Service Commission MUST address.

The monopolistic fees that rocky mountain power is proposing will discourage most of their customers from considering roof top solar. The rocky mountain power area has some of the best producing areas for solar power in the country as it is high altitude, low temperature (higher voltage), and clear skies. By allowing the Utilities to propose solar fees, especially when they are hypocritically installing their own solar fields in the state, is allowing them to walk over Utah citizens options for an alternative energy and a way of positively impacting the environment we all live in.

I ask you to suspend the tariff and prevent Rocky Mountain Power's proposal from taking effect on December 9th. This will not only effect thousands of positive jobs that help build the world that we want to live in for our children and grandchildren, but it will destroy the residential solar industry in the state of Utah. I suggest that you only allow Rocky Mountain Power use the normal rate-making process.

Please look to other states such as Hawaii or California as an example who have done extensive studies on roof top solar and how it is effecting the grid and utilities. The utilities there are still profitable, successful, and willing to work with rooftop solar. Please consider this ethical option and not allow monopolies to destroy capitalism and our environment.

Advice No. 16-13

1 message

mark@link95.com <mark@link95.com>

Wed, Nov 23, 2016 at 10:51 AM

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

Rocky Mountain Power recently proposed a change to the rate structure for solar customers (rooftop) via "Advice No. 16-13". I'm deeply concerned that the tariff proposed to begin on December 9 will have a chilling effect on the solar industry, potentially affecting thousands of workers and hindering this promising industry. As we approach the inversion season, we'll be presented with a stark reminder of the need to provide Utah residents with cleaner energy sources. Solar energy certainly has proven to be a promising contributor to a larger solution. Please consider suspending the tariff and require that RMP use the normal rate-making process.

Thank you for allowing the public to opine on this important issue. My hope is that you will reject Advice No. 16-13 and, by consequence, allow Utah rate-payers, energy innovators, and the Utah public to be viewed as equals to RMP.

Sincerely,

Mark Harris, Holladay, UT

Reply-To: Ray Palmer <moroni@yahoo.com>

To: "psc@utah.gov" <psc@utah.gov>

For more than a hundred years Rocky Mountain Power and it's predecessors have had a monopoly in the area they serve. That has changed somewhat today because of solar. If they want to raise rates it isn't enough to just get permission from the PSC, they must also consider what that will do to the number of solar users. It is quite natural that they don't like this situation. But for the rest of us it has changed everything. They have made up reasons why you should put an end to this. It has been shown over and over that solar users pay their own way but things like this can be made to be whatever you want them to show. This is true for both sides. Since that is the case and the public is greatly benefited by solar adding competition to the system it makes little sense to take the side of the utility . The public is not crying out for this action. It is the utility . It is easy to see who is really the beneficiary .

Dear Commissioners,

I am vehemently opposed to the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I am just starting the process of adding photovoltaic solar panels to our house, and would be prohibited by the cost if the proposed new rates take effect!!!

It is critical that we find newer, safer ways to supply power to our homes and buildings. Individual, rooftop solar is safe, reliable, and has no detrimental environmental/air quality effects.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

In light of RMP's recent rate proposal(s) for solar panel array users, I find it interesting that the government mandated we swap out our incandescents for CFL's. How come RPM wasn't screaming bloody murder when that occurred?

Then, we were/are all encouraged to use (expensive) LED technology. CFL's turned out to be a nightmare for disposal due to their mercury content and leds were even more efficient, too.

Now, some universities and area colleges are installing/leasing solar panel arrays on their properties and bragging about it (saving "millions of dollars! Preventing the production of millions of pounds of CO2! "). Why wouldn't RMP be up in arms concerning those types of installations, then. Surely their huge installations are more a threat to them than us lil' ol' peon homeowners! If the rates proposed by RMP go through, then they should be "penalized" in the same manner using the same rate structure(s) as we common folk. Nine bucks per kilowat/hour indeed! It's all about the money and nothing else.

We need to find sympathetic senators and congressmen (women) to pass laws preventing this kind of robbery.

In my opinion, solar panel array users are reducing the loading of high-tension lines, the burning of coal and natural gas and the use of precious water resources by hydro-electric generation, thus extending their service lives and saving massive amounts of water for irrigation, especially in the summer time when air conditioning is at it's peak in the daytime! Well, that's when solar panels are at their peak of generation! So what's the problem! No more sagging high-tension lines! YEEEEAAAAA!

If I had my 'druthers, I'd buy a bank of Nickel-Iron batteries and cut the cord..... oh, but that's illegal, is it, thanks to our "legislators"? I still may do it....

And then there are the acres and acres of solar panels now being installed by the power companies all over the place (Check out Europe and Scandinavian countries) and I'll just bet they('ll) charge a premium price for "green" power! Kinda like the "Blue Skies" program... come on, if anything is intermittent, it's wind generation! Oh, and to combat that, they are recycling used Electric Vehicle batteries and storing power to feed it back into the grid!

As I understand it, the PSC, in exchange for giving RMP a monopoly and a guaranteed rate of return to it, is supposed to hold RMP in check, so the company does not gouge the consumer!

Something else that has always stuck in my craw.. why do the large consumers of RMP's power get a price break on their electricity rates? How about those large businesses who choose to go solar shouldn't they be hit with the same rate structure if approved by the PUC? If not, why not? How does the PSC justify their reasoning for that?

How come if we use in excess of x number of kW hours we get charged more? What the heck is the

reason for "summer" blocks vs "winter" blocks.

Ruling in favor of RMP also sets a dangerous precedent for US West and Questar Gas. Can you imagine US West filing with the same reasoning as RMP using that as an excuse to charge all cellphone users? Questar Gas could use the same logic to claim that those who use only electricity for heating, and not their gas (lines) where available deserve to be penalized with a "maintenance" fee, too!

(I've just had a 5kW array installed on my home, so I have a vested interest in the PSC's ruling on this matter.)

Look, I wouldn't mind a minor net-meter cost or leasing fee, say \$ 5.00/month (remember the \$7.00 we used to pay to "lease" our front yard security light?).. sounds reasonable to me, but \$ 9.00 per kW hr and x bucks a panel?

How about looking at studies of what other states, aside from Nevada, have determined about the benefits (or not) of individually-owned solar arrays

Newt

To: "psc@utah.gov" <psc@utah.gov>

Hello,

I vehemently oppose the recent proposal from Rocky Mountain Power. Specifically the PacificCorp - Rocky Mountain Power's advice No. 16-13. Rocky Mountain should be required to use a normal rate making process. Not one that will prevent all Utahans from receiving affordable solar. I propose suspending the tariff that Rocky Mountain Power has proposed to take effect on December 9th.

There is a reason there are tax credits given to homeowners all over the country that go solar. Homeowner's should if anything be rewarded for helping our environment our clean living quality. Punishing homeowners for going solar would be despicable and Rocky Mountain's proposal would do just that.

As a citizen of the state of Utah, I do not want to see what happened in Nevada and currently happening in Arizona. I own a town home at the moment and although I cannot put solar there, ~~now~~ I do not own the roof portion. I would love to be able to put solar on any future home I own in Utah. If Rocky Mountain is allowed to pursue this any further this will damage any of those chances of me being able to be a good citizen and receive solar for my own home. Secondly the inversion in Utah, simply put, is BAD. I cannot imagine anyone opposing doing anything in our power to correct this. Rocky Mountain's proposal would take away one of the most beneficial ways to improve air quality.

As an employee of a solar company I know for a fact that solar has been a fast growing industry. I have many friends that work for other solar companies as well. This proposition would cause ~~loss~~ of and ultimately destroy an incredibly large part of Utah's economy. Collapsing the income of many Utah citizens.

As my personal beliefs play into my opposition. We have a duty to push forward clean energy in this world. Fossil fuels are not the future, that is extremely apparent, and unarguable, as they are not RENEWABLE. I understand that clean energy options are putting a strain on Rocky Mountain Power but I do not believe that gives them a right to do something that creates solar to be ~~unaffordable~~, and something that we as a people cannot continue to pursue. It is a losing battle on all ends if Rocky Mountain Power is able to push this forward. Let us think about it for a moment... If Rocky Mountain Power is able to put a large strain on solar it would most certainly halt solar progress in Utah. In turn, they would make more money continuing to remain the monopoly they are. They would benefit for a while sure. BUT years down the road when fossil fuels continue to run out, the monopoly will grow increasing rates for the state even more. Then in the future we are still behind on having any other

options for energy when we do begin to run out of fossil fuels. WE DO NOT have time for this. The world is changing now I propose Rocky Mountain Power adjust in other ways. Preventing solar from being affordable is detrimental in ALL WAYS.

Thank you very much for hearing my opinions regarding this.

Thank you,

[Brittany Gardner](#)

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Costantino Grandjacquet

To: psc@utah.gov

Dear Commissioners,

I would like to express my opposition of PacifiCorp RMP's Advice No. 16-13 and sincerely urge the Public Service Commission to suspend the tariff that is scheduled to take effect Dec. 9th. Rocky Mountain Power should be required to go through the normal rate making process instead of rushing to get this past the public.

My husband and I are hard working middle class civil servants with two small children. Our 5 year old struggles with asthma which is exacerbated by the poor air quality here. Leveraging the sustainable energy of the sun is a great way to improve the air quality which would improve his condition. We have been seriously considering adding a solar energy system to our house over the last couple of years. If RMP is allowed to impose the proposed tariffs on new solar customers, we will be unable to consider the system as it will no longer be affordable. Aside from my personal reasons for opposing the rate change, such increases could cripple the solar energy market that has proven to be a boon to local and state economies. The solar energy market is strong in Utah. It provides jobs for residents of Utah and tax revenue for the state. I would like to see Utah on the leading edge of the solar movement instead of stifled by RMP who wishes to unfairly keep residents from choosing the energy source that is right for them. I have also read articles showing the benefits that rooftop solar systems can provide for the power grid. Having energy entering the grid from multiple sources provides stability and sustainability, and can eventually lead to lower costs for everyone. Making such systems artificially unaffordable through unnecessary tariffs is going in the wrong direction.

Thank you for allowing the public to comment on such an important issue. Extending the deadline for public comment because of Thanksgiving would allow more people to voice their opinion and help lawmakers to see how important this is to residents. For the good of the market, Utah residents, and our beautiful environment, please reject PacifiCorp-RMP's rate change request.

Sincerely,

Alicia Willoughby, PMP

To: psc@utah.gov

To Public Service Commission Commissione rs:

I appreciate this opportunity to express my opposition to the 11/9/16 proposal from Rocky Mountain Power , ("Advice No. 16-13") that would alter the rate structure for rooftop solar customers.

I believe it is wrong for Rocky Mountain Power to raise rates for prospective rooftop solar customers. Rooftop solar constitutes an area of strong and increasing job creation and revenue in Utah. A rate increase would undermine this important and valuable industry. In addition, every solar energy installation provides air quality benefits to ALL people locally and increases the attractiveness for Utah to draw tourists to our state from across the country and around the world.

I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed.

I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13. At the very least, Rocky Mountain Power should be required to use the normal rate-making process.

Thank you for accepting my input on this matter .

To: psc@utah.gov

I oppose PacifiCorp's advise 16-13 to raise rates for solar providers . If Rocky Mountain power raises these rates outside of the normal rate setting protocol, solar generators and the public will be unfairly burdened.

PacifiCorp is a monopoly utility. They are threatened about their bottom line and what solar generation will bring in the future. A rate change to punish individual solar generators is an effort to maintain their monopoly status by making solar too expensive. This action will kill solar growth in the Utah area.

We are taught to be self reliant. Figuring out how to harness that big ball in the sky for individual homeowners needs is the future. Solar generation above and beyond what is needed by the homeowner is transmitted over short distances to the nearest neighbor that needs it. This means Utah power doesn't have to buy power from long-distances and suffer transmission line losses. There is a big advantage to the utility because of this fact. Is this reality fairly represented in their request?

Individual homeowners who invest in solar production benefit their community because the investment lessens the amount of power the utility must buy at top prices from other places in the grid. In addition, individual solar production adds up so that capital investments in new generation facilities is reduced.

Why should power rate structures be unfair to one category of customer? Utah power themselves are teaming up to install solar on business rooftops all over the place ie : Vivant Arena. Does this mean it's OK for Utah power to produce solar but nobody else?

Please consider suspending this unreasonable rate structure/tariff on December 9. The normal rate setting process should be not forgotten. Utah power needs to look to the future and partner rather than divide.

I am no tree hugger. That does not mean that I don't respect Brigham Young's admonition to take care of our environment. Solar represents a clean source of renewable energy and I believe Utah's air quality can be improved by individual solar producers. The right to produce solar at a cheaper cost should not just belong to PacifiCorp.

Thank you for accepting input from the public on this important issue. I would ask you to consider putting individual solar generators and people like me from the public on an fair footing with Rocky Mountain power. Please reject Rocky Mountain power's request 16-35.

Sincerely,
James J. Miller

As a resident of Utah, Rocky Moutnain Power user and potential Solar User I'm opposed to PacifiCorp-Rocky Mountain Power's Advice No. 16-13. As Utahns we should be encouraging the use of Solar power I ask that you suspend the tariff and prevent Rocky Mountain Power's proposal from taking effect on December 9. I think Rocky Mtn power and Utah can come up with a better proposal that makes it better for everyone to win. I think that Rocky Mtn Power can use their normal rate making process to come up with a solution that makes their business make sense without hurting an industry that creates jobs and helps the environment. I have seen states like Arizona and Nevada make similar choices when they are in need of more options for power production. I understand the need for the Rocky Mtn Power to have their monopoly but do they really need to kill solar power for anyone but themselves?

thanks

Greg Neil <gregneil@mac.com>

Wed, Nov 23, 2016 at 11:14 AM

To: psc@utah.gov

I am writing to state my opposition to PacifiCorp-Rocky Mountain Power's Advice No. 16-13. This proposed rate change is unfair to rooftop solar customers, of which I am one. Please suspend the tariff and do not allow Rocky Mountain Power's proposal to take effect on December 9th. Rocky Mountain Power should use a normal rate-making process.

A significant number of studies has shown that net metering benefits the grid and all ratepayers. Please consider the some of the reasoned information from the non-partisan Brookings institute at this link:

<https://www.brookings.edu/research/rooftop-solar-net-metering-is-a-net-benefit/>

The Salt Lake area is experiencing a lot of growth, and is poised to become a crucial technology hub. But if we do not get a handle on our pollution problem, quality of life will continue to suffer, especially in the inversion months, and top talent will not want to live here. To accommodate our projected growth we must tackle pollution, and the growth of rooftop solar, now that it has become financially feasible, is an important part of improving our air quality. The proposed rate change will absolutely destroy the financial feasibility of rooftop solar and kill the market.

I believe Rocky Mountain Power has a right to find rates that allow them a profit, but I feel their proposed changes are predatory and designed to kill competition and innovation.

Thank you for taking the time to listen to the public's input on this subject.

Regards,

Greg Neil

Craig Rodman <craig@coalitiontitle.com>

Wed, Nov 23, 2016 at 11:17 AM

To: "PSC@utah.gov" <PSC@utah.gov>

Hi PSC,

I received notice today that there is a public comment period, but that it has expired just yesterday

This is a very short comment period as Rocky Mountain Power (RMP) filed a request before the Public Service Commission to raise rates on rooftop systems on November 9. I am writing you in opposition to RMP's proposal, which will eliminate solar in Utah and severely impair the county's progress moving toward safe, reliable alternative sources of energy.

The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah.

The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada and Florida to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost.

Utah prides itself as a economic development state. Our office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed.

Your leadership on this issue is critical. Thank you for your time.

Sincerely,
Craig Rodman

Dear commissioners,

As one of the cofounders and co-owners of Energy Savers companies, I feel it is my duty to write you to oppose the new tariff that Rocky Mountain Power (RMP) is proposing. Docket No. 16-035-T14. Energy Savers has been involved in Home Performance Contracting in Utah for almost a decade installing insulation, air sealing, duct sealing and insulation, and for the last 4 years...clean solar power. What Rocky Mountain Power is trying to propose in Utah will ultimately limit solar installations to homeowners who can afford battery storage systems to avoid net metering. Battery storage systems don't make financial sense with current equipment and pricing. The current payback on a battery storage system is roughly equivalent to the life of the system itself, whereas a grid tied system with the current RMP rate structure has an average payback of about 7 years. In my opinion, it is not by coincidence that the proposed changes will lengthen the payback so drastically. If the proposed changes are approved, homeowners will now be faced with a payback that matches the life of the system, and the changes will ultimately end solar power installs in Utah. This is a strategic move by RMP to ruin the solar industry here in Utah. Everything that RMP does is calculated and strategic. It is not by chance that the "1st hour" amendment to propose similar changes made its way into the STEP bill in March of this year. RMP has a stranglehold on the electric utility market here in Utah, they are guaranteed a 10% profit margin, and the new growth and interest in solar power in Utah is cutting into that margin. There are other ways for them to "recuperate" these lost margins. They claim that their transformers are blowing up because of they are not rated to handle the excess power being back fed into the grid. They don't mention however that in times of extreme energy use, solar is helping with brown outs and other grid problems, like some of the other programs they have introduced to help these situations, like CoolKeeper, and WattSmart energy rebate programs. I believe in capitalism and a free market. If RMP continues to bully regulators and fool them into believing that the new tariff changes are really in the rate payers best interest, they will ultimately get what they want and keep the competition at bay. I would propose that solar customers have the option to purchase the necessary equipment from RMP if they have a desire to install solar power on their homes, including the net meter itself and transformers where necessary. Solar customers would ultimately still benefit from the grid, and if the current \$8 per month basic service fee that RMP charges all of its customers isn't enough to cover these costs, then I would propose a *un-biased* third party analysis be performed before approving this tariff on terms that are obviously biased, and benefit only RMP.

I have argued mostly that the proposed changes don't make sense for financial reasons...there are other reasons that vastly outweigh the financial reasons. I have lived in Utah my entire life. Born and bred. Utah's winter inversion is getting worse every year and one of the leading causes of this is carbon emissions. I understand that there are efforts being made between the PSC and RMP to limit this and as a Utah resident I appreciate it. If the proposed changes are approved, RMP will be the only entity with enough resources to continue the solar movement in Utah, especially if they are allowed to fool us into thinking that rate changes are necessary for the good of the rate payer every time a hint of competition arises. Solar power makes sense for Utah's inversion and the environment, and RMP shouldn't be the only entity that has an obstacle free road to building up solar infrastructure. The solar industry currently employs thousands of Utah residents. Energy Savers proudly claims over 30 of those. These rate changes will force the hand of many Solar companies in Utah to shut their doors. There will be no transition phase, it will be immediate. The changes will immediately reduce clean solar power installation by private companies by over 90%. RMP may claim that they will have the need to reduce workforce if the changes aren't approved as well. I think that their bottom line is what will ultimately change and that scares their investors in to making sure it doesn't happen.

There are smart ways to respond to these proposed rate changes. Please do what is best for the state of Utah and it's residents, and not what is best for RMP .

Sincerely,

Jeff Dimond

Commissioners:

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Thank you.

Tyler Cruickshank

Wed, Nov 23, 2016 at 11:25 AM

To: psc@utah.gov

Good Morning,

I am writing to oppose Rocky Mountain Power's proposal, which it filed on November 9, 2016 (Advice No. 16-13). This proposal is unfair and would have a devastating effect on residential rooftop solar energy, which is something we should be encouraging. Please suspend the tariff - it should not take effect on December 9.

I don't see any reason why something this significant should not pass through the typical rate-making process. Do you?

I'm puzzled by Rocky Mountain Power's actions - seems they are in favor of solar energy, but only if they control it. Residential rooftop solar is a win-win-win proposition: a win for consumers, for their neighbors, and for the environment. Why discourage it?

Please reject RMP's actions.

Sincerely,

Steven Burt

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on *December 9* as Rocky Mountain Power has proposed. I am appalled that Rocky Mountain Power should even think that they can slide this proposal under the rug and slip it by the public. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution. In Nevada when they allowed this same shenanigans to take place, it basically killed rooftop solar power. In Utah, especially in Salt Lake Valley, we need to do everything we can to make the air cleaner. We need to do more research to learn to make energy cleaner. Solar power is one of the first steps.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

>
> I just wanted to write and give my thoughts with regard to the proposal that Rocky Mountain power has put forward to raise rates on solar customers. I think in the Salt Lake Valley out of any other city we need solar. We need to push for clean energy in our valley. This is not something that should not be about money anymore, it should be about the health of the residents of Salt Lake City. I already have solar panels on my house, it was extremely costly, but I felt I was making a difference by installing them. I would also like to put solar panels on rental properties that I own and it's already expensive enough to front the cost of the panels themselves... To raise the rates on customers is going to stall the progress that solar has made in our community.
>
> For the future of our kids, air quality should be a top priority and anything that pushes us toward cleaner air should be incentivized, not taxed and upcharged.
>
> Stop this nonsense, don't allow Rocky Mountain power to charge these fees.

Dear Commissioners,

I am in direct opposition to the recent proposal from the local utility company , Rocky Mountain Power. This is regarding "advice No 16-13", set to take effect on December 9. As a public utility and the only option for power in Utah, Rocky Mountain Power should be required to use normal rates for all customers.

I am appalled that there is a possibility that the consumer is not protected in an endeavor to protect the environment by choosing a better source for energy. This proposal will make it nearly impossible for anyone to choose solar as an option. I love Utah and hate that there is a cloud of smog that blankets our city . I hate that my efforts to change this can be hindered or stopped completely by regulations that allow the utility company , Rocky Mountain Power, a monopoly on the market, shame on you if you allow this proposal to be implemented.

Dear Commissioners,

It is not environmentally friendly and morally correct to penalize people who want to reduce their usage of electric power and reduce their carbon footprint by installing solar on their homes to allow RMP to add an increased fee and or charge to those net meter customers, how are trying to lessen the demand on the grid. if the are allowed to charge this fee , then they should be forced to purchase excess power produced by solar customers back from them, to make it a fare and equitable trade off. Please don't let RMP kill the solar industry in UT like what happened in nevada.

thank you. James Nielsen. North Ogden. UT

April Wilde <wilde725@gmail.com>

Wed, Nov 23, 2016 at 11:48 AM

To: psc@utah.gov

Dear Commissioners,

As a concerned citizen of Utah, I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

For reasons that seem to be obvious to us as residents of Utah, these actions of Rocky Mountain Power should not be allowed. They simply should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. These changes proposed by Rocky Mountain Power not only affect me, but every other individual within the state who currently breathes the unclean air we experience within the state. Various articles support that the use of solar helps to reduce the need for other less clean forms of energy generation. I would personally like to thank the Commissioners for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

To: psc@utah.gov

Hello,

I am 24 years old and have been working in the solar industry in Utah for three years.

I would like to ask you to suspend the tariff and prevent Rocky Mountain Power's proposal from taking effect on December 9. Solar in Utah has been a strong way to create jobs for us, and the company I work for currently Brio Solar has most of our work coming from Utah and to suspend that would cause us to pull out from our biggest market currently. We have had to do this previously with Nevada as well as Arizona.

Rocky Mountain power should not be able to stop solar from being placed on rooftops. Sure they can create their own solar fields and are but the problem here is when competition comes Rocky Mountain Power wants to stop it so that they can cause a monopoly.

Solar has created many jobs not only for Utah but for the entire United States. I would urge you to stop Rocky Mountain Power from doing this. Solar is one of the fastest growing industries, and to stop one of the best companies.

Thank you for listening to this email and taking the time to listen to the public. I hope that the correct decision can be made. Please stop PacifiCorp-Rocky Mountain Power's Advice No. 16-13.

Thank you.

Best Regards

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution. This proposal would kill the entire solar industry and for what? huge job loss, more deaths in coal mines, and dirtier air. If a person is willing to help our state by putting roof top solar on their homes why penalize them? If Rocky Mountain Power is a public utility then shouldn't it be concerned about the public?

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power's Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. I encourage the Public Service Commission to prevent the tariff from taking effect on December 9 as proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe Rocky Mountain Power's arguments are flawed and it would be unfair to raise rates for customers who wish to use rooftop solar as presented. I believe there are benefits to neighbors of rooftop solar homes that have not been considered adequately. I also believe there are benefits to Rocky Mountain Power that need further analysis.

I am very concerned about our children's future, and I believe the cleaner air and reduced impact on the planet provided by solar energy is an important factor. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you consider the interest of small residential users and the greater Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

As someone who would like to install solar panels on my home, this change in rate structure might make it not financially feasible for my family. Solar is a large investment for a family to make, but has very large benefits to the Utah community. However, it also must be financially feasible for the family installing and paying for the solar panels.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Please deny the rate hike for Rocky Mountain Power for Solar Power. I am a lover of Utah, mother of two, and value our beautiful state. We will not be able to continue to breath in our valley if we do not support affordable renewable energy sources at affordable costs.

Consider what happened to solar in Nevada with their rate hikes, and do not agree to the proposed increase.

Best Regards,

Dr. Jennifer Wahlen-Poorman, D.M.D.

Re:Docket #16-035 T14 Public Comment

To the Commission,

I am an older Utah resident now living in Escalante, Utah. However , my husband and I have retained ownership of our home in Salt Lake City and have been Rocky Mountain Power customers for approximately 40 years. We left Salt Lake City because bad air in 'the valley' was causing a very negative impact on my health. We would like the option of being able to live in Salt Lake, but cannot do so until better environmental conditions exist.

Please protect citizens such as children, those with physical impairments, ordinary citizens who simply cannot be exposed to this kind of seasonal pollution and health-impacted citizens like myself. Most people do not have the luxury of affording two homes. You have the power to make things better , incremental as that might be.

I urge you to make it necessary that Rocky Mountain Power join in people-protecting technology by removing the tariff and encouraging Rocky Mountain Power to reconsider its utilization of energy resources in a more publicly responsible way . Reject Advice # 16-13.

Sincerely,

Jean C. Bramble

Dear Commissioners,

We are deeply concerned about PacifiCorp-RMP's Advice No. 16-13, filed Nov 9, 2016, seeking changes to the rate structure for rooftop solar customers.

Please suspend the proposed tariff and do not let it take effect December 9th as Rocky Mountain Power has proposed, and require them to use the normal rate-making process so there can be proper vetting of the proposal.

The proposal seems to be anti-solar and would unreasonably raise the rates for new solar customers, limiting access to clean and efficient energy. We are pleased with the solar system installed on our home in November 2014 and have felt good about minimizing our use of and contributing to the power grid. We are, of course, especially concerned about bona-fide grandfathering of our system from rate changes.

Thank you for accepting public input, but request you extend the deadline for such. We were not aware of the activity until Tuesday Nov 22, when we received notice from our provider

We respectfully request that you reject PacifiCorp-RMP's current rate change request.

Dear Commissioners,

Those of us in the state who have taken an interest in helping remove emissions in the air and to create new energy...have a moral right to be protected and treated fairly . The power we generate from our solar investment does go into the grid, and therefore we are collectively helping the whole of our community. Should we not be allowed to reap some benefit by cheaper rates! The reasonable and common sense answer to this is a resounding "of course"! Rocky Mountain Power should not receive more benefit than the excess power provided to their system. Hanging an extra tariff on those stepping forward to invest in this community resource is wrong. The investors and property owners need not be penalized to line the pockets of the shareholders.

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner , more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely

Steven Suprise

Dear Commissioners,

I oppose the proposal by Rocky Mountain Power , "Advice No. 16-13", filed Nov . 9, 2016. the Proposal by Rocky Mountain Power would change the rate structure for rooftop solar customers. I request the Public Service Commission suspend the tariff and prevent it from taking effect on December 9. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is very unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . We are stewards of God's creation and must safeguard it. I am extremely concerned about the global warming, future of our planet, our wildlife, ecology and of the world population to be decimated by global warming. Solar energy will create new jobs and technology. I believe solar gives pe ople access to a cleaner , more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power , and reject Advice No. 16-13.

To: psc@utah.gov

Dear Commissioners,

The Rocky Mountain Power (RMP) rate increase request for homes with solar power units is **outrageous and will kill the solar industry!!!** If you need evidence of what these outrageous fees will do to the solar industry , just look at what happened in Nevada!!! Their solar industry dropped up to 99% in less than a year due to outrageous fees on solar.

I do not have solar panels on my home but, have been researching options for the last couple of years. The proposed increase will completely and permanently cut me out of being able to install solar , because I cannot/will not take 30-40 years to pay off a loan to get solar panels. It's not worth it! (And, I refuse to go into debt to get it anyway .) **There is no way that any home owner or business power consumer would want to invest in Solar energy with the proposed fees that Rocky Mountain Power wants to implement.** It's not worth it!

Next: Though I do not consider myself a liberal environmentalist, I want to do what I can to reduce the negative impact of pollution in the air. RMP's proposal will have a huge impact in a negative way towards our communities being able to make short term and long term progress in this regard.

Finally, allowing these fees to be implemented will only tighten the dependence grip that RMP has on us that rely on them for power. RMP may say that consumers can buy green power from their "solar farms" but, that route is more expensive than regular power. In a time when families in UT, which on average are larger and trying to save money any way they can, RMP's argument that they are trying to protect non-solar households falls woefully short and comes across as a farce and really, is outright laughable!!! Also, the monopoly that RMP has right now would only be entrenched that much more.

I can see the need for RMP to protect their bottom line but, there certainly has to be a better way . They also need to realize that times are changing. I know there is a more fair solution. Lastly , if RMP is getting excess power generated from the customers who have solar panels, why penalize them?

I truly hope the Public Service Commission will do its job, as it has done well in years past and deny RMP's request. I hope you all smell a rat in this, especially in the timing of this request and the short time frame we, as consumers have had to study this and respond.

Thank you for your time,
Doug Roberts

Tim Herzog <timmyzog@gmail.com>

Wed, Nov 23, 2016 at 1:28 PM

To: psc@utah.gov

I've been reading with alarm about Rocky Mountain Power's plan to increase the rates for solar customers. I have already installed a solar system in my home, but there was definitely an economic analysis when I did so. The new rates that RMP is proposing would have dramatically changed my decision and I probably would not have carried out the installation. I had the pleasure of watching the hard working Utah men and women who installed my system. They are gainfully employed because of the solar industry. This proposal would dramatically reduce the solar industry. If we want UT to be known as an energy state, we need to have these home installations as well as all the other things we do to produce energy in UT. We currently have significant air quality problems here. I know two highly educated and hard working colleagues that had to leave the Wasatch front due to asthmatic family members. Solar production will decrease the emissions that are harmful to our most sensitive members of our society. Rocky Mountain power has a state granted monopoly in our state and as a result, they should not be allowed to change the rules on solar production of energy in order to increase their profits. They should adapt to renewable energy. My rates will not be increased by this plan so I have no vested interest other than trying to maintain a vibrant industry in our state that employs Utahans with good jobs. These workers pay taxes, buy goods and improve our economy while helping to clean up our air and make us a community that more people want to move into. Please help keep the rooftop solar industry thriving in our state. Thanks for your consideration.

Peter Wilk <pete@petewilk.com>

Wed, Nov 23, 2016 at 1:31 PM

To: psc@utah.gov

I would like to voice my concerns regarding PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016. I am a mechanical engineer, rock climber, skier, and lover of the outdoors. My education and affinity for the outdoors allows me to acutely recognize the role that solar energy plays in Utah and globally. This source of energy is one of the best ways in Utah to generate the necessary power to keep SLC and Utah's economy and tourism as strong as it has been. The increased emissions from fossil fuels is easily seen earlier in the winter and more frequently here in the Valley, even in my only four years as a resident. The recent proposed rate increase by RMP against solar installations will have a significantly negative impact on the solar industry in Utah. This suggested rate increase, coupled with the proposed elimination of the Utah subsidy, will kill the growth rate of new solar installations. Installation of solar is one of the easiest ways to reduce the emissions problems in the Salt Lake valley. Historical sources of energy are not sustainable and have strong negative impacts to the environment and to Utahns' health. Solar helps mitigate those problems.

RMP's proposal timing is strategically planned to allow the least amount of public input due to Thanksgiving. This tactic exposes their profit oriented goals rather than customer and environmental concerns. The monopoly of RMP on the power in Utah is threatened by customers becoming independent via solar installations and this proposal, timed with eliminating Utah state subsidy, is not forward thinking and anti-competitive.

I currently do not have solar installed on my home. I have explored installing it earlier this year and was close to doing so. However I decided to wait a year or two so that my finances had more preparation for the large expense of installation. If the RMP proposal goes through my ability to purchase a solar installation is in question. Large solar farms that RMP advocates take up more land and further encroach on the natural beauty that Utah offers. Why not encourage the users to use the space they already have on their homes, and to generate at the point of use to minimize losses in power transmission?

Thank you for accepting my thoughts on this issue. The arguments against solar are for cost/profit reasons. However, these arguments are myopic and do not consider that these "losses" in profits are actually investments into the future of our health, environment, and economy.

Dear Commissioners,

Once again Rocky Mountain Power is attempting to maximize its profits at the expense of the people and I know it's only a matter of time before they succeed. I am opposed to "Advice 16-13" which would change the rate structure of rooftop solar customers. Of course this is the first I heard of this and I'm sure it's merely a coincidence that it is around the holidays when people are distracted and might overlook this matter or, like myself, miss the deadline by one day. To be honest I am personally disgusted with the greed and blatant corruption that exists in all facets of government and business anymore. I, like many others apparently, have had enough and I sincerely hope that you put the people and our fragile ecosystem first over profits. Do the right thing because you know what it is!

Dear Commissioners,

I am opposed to PacifiCorp-RMP's Advice No. 16-13, filed Nov9,2016, that would change the rate structure for rooftop solar customers. They should have to go through the normal rate setting process and not change the rooftop solar rate structure until after the normal process has been followed.

I don't think the Public Service Commission should suspend the ta

This rate increase would effectively eliminate the rooftop solar program and limit access to clean and efficient energy

If they are allowed to do this like their parent company did in Nevada it will have the same effect of almost eliminating the rooftop solar program in Utah. It will put many people out of work, and cause more people to be at the mercy of RMP for their entire energy source.

Thank you for allowing me to express my concerns.

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Nic Johnson, iheartredsox@gmail.com, Pleasant Grove, UT

To: "psc@utah.gov" <psc@utah.gov>

Hello. I have a Solar system through iVint Solar, I saw this message from them(<http://utsolar.org/net-metering/>), but the message seems to be heavily biased by their point of view as a company. Can you tell me what the proposed hike would mean for me as an existing solar/net meter user?

Thanks,

Jeff Spaulding

Wed, Nov 23, 2016 at 2:36 PM

We strongly oppose the Advise No.16-13 filed by PacifiCorp-RMP on November 9th 2016.

We installed the rooftop solar panels not long ago and have enjoyed the solar power since then. "Sun" is a free gift from God to everyone. It does not belong to any power companies. We don't understand how any government, federal or state, can allow these power companies to deprive people's right to have cheap energy

We wonder if one day we also need to pay for the air to breathe?

What do we need a government for if the government cannot stand up for its people?

ANGELA SLOAN <angelasloan1@gmail.com>

Wed, Nov 23, 2016 at 3:04 PM

To: psc@utah.gov

Dear Commissioners,

I have recently had solar panels installed on my home in an effort to save money on my electric bill. I am a single mother with a special needs child and I am struggling to make ends meet. With rising electricity costs I felt that solar was a smart solution not only for my budget but for the environment.

Therefore, I am very concerned to learn about a proposal by Rocky Mountain Power to have the ability to change the rate structure because I have solar panels. If I had know about this, I would not have had the solar panels installed, because I am locked into a 20 year payment agreement to pay for these panels. If Rocky Mountain can change my current rate for electricity, then I am very concerned that I'll be spending more money rather than saving money. It would be very hard for me to pay any more than I am already.

Please strongly consider what this would mean for everyone who has spent large sums of money to commit to solar power. Or at least grandfather in those who have already purchased solar. It is not fair to 'change the rules in the middle of the game'.

Sincerely,

Angela Sloan

Public Service Commission

Docket #16-035-T14 Public Comment

Dear Commissioners:

I have recently become aware of the proposal from Rocky Mountain Power that would change the rate structure for rooftop solar customers, (Advice No 16-13 filed November 9, 2016. I am strongly opposed to this rate structure increase. Especially in this manner. I respectfully request that the Public Service Commission suspend this tariff and not allow it to take effect on December 9th as proposed. Rocky Mountain Power should be required to use the normal rate making process for this proposed change.

It is clear that Rocky Mountain Power wants to make an end run around the normal process and review which will show this is an inappropriate rate change. Utah should continue to encourage clean and efficient energy in any way possible. Making the investment in rooftop solar cost prohibitive is not a helpful long term solution to our energy needs. Rocky Mountain does not need the additional profit. As a public utility their purpose should be to benefit their users and we don't want to go back to more and more fossil fuels to meet our future energy needs.

I am aware that other regions of our country have found home solar to be very helpful in solving long term power system issues. I have made the significant investment in solar power as part of my contribution to clean power. Please do not allow this rate increase to move forward which will end our progress in this area.

Very truly yours,

Edward F. Bates

Wed, Nov 23, 2016 at 3:09 PM

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

As a concerned citizen of Utah, I would like to state my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov . 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

For reasons that seem to be obvious to us as residence of Utah, these actions of Rocky Mountain Power should not be allowed. They simply should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & ef ficient energy. These changes proposed by Rocky Mountain Power not only affect me, but every other individual within the state who currently breaths the unclean air we experience within the state. Various articles support that the use of solar helps to reduce the need for other less clean forms of energy generation. I would personally like to thank the Commissioners for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Autumn Hindman <autumnhindman@gmail.com>

Wed, Nov 23, 2016 at 3:13 PM

To: psc@utah.gov

Dear Commissioners,

I am in opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the PSC to deny the utility's fast-track request and require it to use the normal rate-making process for its proposed changes.

I strongly feel RMP should not be allowed to raise the costs for new rooftop solar customers. Doing so is contrary to the best interests of the general public and, on a larger scale, the environment. The proposed changes will certainly be a detriment to the people of Utah as well as the population of Earth and only to the benefit of an already large corporation.

I thank the Commissioners for accepting public input, though the deadline should be extended, and respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Dear Commissioners,

This is to oppose the proposal from Rocky Mountain Power (RMP) "Advice No. 16-13" filed November 9, 2016 (Docket #16-035 T14 Public Comment) to change the rate structure for rooftop solar customers. I ask the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as requested by RMP. Power should be required to use the normal rates.

My wife and I have a rooftop solar system on our home. We consider it our small (but expensive) attempt to aid preventing climate change, which is accelerating. An added benefit is that rooftop solar contributes power to the grid, allowing RMP to invest less in power infrastructure. As an older geologist, I have hundreds of friends and colleagues across the country in this and related professions. As with me, NONE doubts that climate change is real and man-made, and most feel that it is the World's greatest pressing threat to life. Speaking just of Utah, the greater Salt Lake City area has a massive smog problem, all due to burning fossil fuels. RMP must not be allowed to discourage the solar power business in one of the country's sunniest states, nor to discourage private investment in solar, nor to raise our rates.

Thank you for your help.

Sincerely,

Brad BAILEY <baileybrad@mac.com>

Wed, Nov 23, 2016 at 3:20 PM

To: psc@utah.gov

To whom it may concern at the PSC.

The proposal by Rocky Mountain Power (Advice No 16-13) is a blatant money grab by a huge corporation at the expense of our environment and the economy

Rooftop Solar means less dependence on fossil fuels. The burning of which contributes not only to our terrible air and inversion locally, but also to the emerging global climate change phenomena.

If we can produce clean energy locally, and contribute to the local economy by providing excellent jobs in the solar industry then we should strive to do so.

We already have an example of what the proposal provided by RMP does to solar industry. Nevada enacted a similar law and its rate of new solar installations plummeted, to the benefit of RMP's parent company. Nevada, like Utah, is in America's solar belt. It is sad to think of the public good that is being traded in the search for private profit.

We have a chance to make a difference and let this burgeoning industry expand and grow. This is especially important because of the new technology that is coming online from innovators such as Elon Musk.

I hope you have the foresight to allow the solar industry to grow and stand up to RMP for the good of our community.

Thank for your time.

Rocky Mtn. Power versus rooftop solar

1 message

Randy and Marlene Berger <marandy@frontiernet.net>
To: psc@utah.gov

Wed, Nov 23, 2016 at 3:25 PM

To whom it may concern,

RE: **Docket #16-035 T14 Public Commen t**

We are writing to ask that you carefully consider allowing the rate increase requested by Rocky Mountain Power to change the rate structure for rooftop solar customers. Even though we would be “grandfathered” since our solar system was installed nearly two years ago, we ask that you consider the reason a lot of customers are going to solar .

In addition to the environmental concerns regarding clean air, frankly, the cost of solar makes it very attractive even though the initial investment can seem high. We have been Rocky Mountain Power customers for over 37 years and during that time, our rate has increased nearly 300%. We are senior citizens, living on a fixed income. When we built our current house (23 years ago), our utility cost was around \$120 per month. The month before we hooked into our solar system, our bill was \$360. Our income has not increased anywhere near that much, in fact, it has remained fairly stagnant.

We understand the need for Rocky Mountain Power to keep standards high, and the equipment in perfect working condition, but by the same token, they need to learn to “tighten their belts” and do with a little less, like the rest of us. Perhaps the majority of people going to solar power are doing so in order to keep costs within their budget. We have no control over the rates charged by Rocky Mountain Power, and since they have been a monopoly for years, we have no alternative other than solar or wind power

You have a very difficult decision and we do not envy your position. Just know we are grateful that you will allow us to express our opinion and hope you will consider carefully, the people whose lives are affected by what you do.

Thanks so much for listening.

Respectfully,

Mr. and Mrs. Randy Berger

Dear Commissioners,

I am STRONGLY OPPOSED to PacificCorp - RMP's "Advice No. 16-13" which was filed on Nov. 9 2016. I urge you to SUSPEND the tariff and not allow it to take effect December 9 as proposed by RMP . Require RMP to use the normal rate making process for its proposed changes.

Rocky Mountain Power has a monopoly in place in relationship to our utilities such electricity and power in the state of Utah, which electricity and power are something every person needs and cannot do without. This monopoly should not have been allowed! Now RMP is proposing to raise rates on those persons who are trying to save money and do good for the environment simply because solar companies are cutting into RMP's bottom line. RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers! RMP should not be allowed to restrict free trade or limit access to clean and efficient energy! If this tariff is implemented I would not install solar panels on my house as it would not be fiscally smart for me despite how much I want to help the environment. With this tariff, solar power would no longer be fiscally attainable!

Commissioners, thank you! I appreciate your time and willingness to accept public input. The deadlines on this matter should be extended as I feel more research is needed on the matter . Please look at all the benefits of solar panels for the environment, the homeowner , as well as the government. Lastly , I respectfully request the PSC, in the interest of ratepayers and the Utah public, to REJECT PacificCorp-RMP's current rate change request.

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner , more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Robert H. Nicholes

To: psc@utah.gov

I oppose the PacifiCorp-Rocky Mountain Power's Advice No. 16-13.

I believe this proposal unfairly changes the rate structure for solar power customers. I think it poses a clear obstacle to those who want to be more earth conscious in their choice to use solar power .

I suggest that Rocky Mountain Power use the normal rate-making process that is much more fair to customers.

I'm grateful to you for listening to the public on this matter . Please consider the benefits of solar power to our community and to our planet. I recently visited shanghai and the pollution was absolutely horrible, if we don't start making the choice for solar power appealing to people and affordable, we will never set ourselves up for a cleaner planet that we desperately need for our children. I have 4 kids under 9 years old and I worry about their future if we don't support solar initiatives better.

My name is Bart Olson, from Salt Lake City .

My email is bartolson1@gmail.com

Thank you for considering this.

Best regards,
Bart

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Additionally, I personally work for a local solar company , and as a single mother of two young boys, I am incredibly concerned that the passing of this proposal will put the future of my company , and therefore my only source of income, at risk. I do not dispute that homeowners should be responsible for a portion of the costs to connect their home to the grid, but the proposal Rocky Mountain Power is requesting is absolutely above and beyond a logical, reasonable amount to charge these homeowners. Please force them to go through the normal rate-making process, which is nothing short of a fair request.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,
Amy Stover

Jacklyn Sullivan <jackie.sull.2014@gmail.com>

Wed, Nov 23, 2016 at 3:50 PM

To: psc@utah.gov

Dear Commissioners,

I wanted to voice my concerns against the PacifiCorp-RMP's Advice No. 16-13, which was filed on Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I would strongly urge you to suspend the tariff and prevent its adoption on December 9th of this year. Contrary to what Rocky Mountain Power has proposed, normal rate-making processes should continue being used.

Rocky Mountain Power is causing an unreasonable rise in the costs for new solar customers that is a violation to free trade and it extremely harmful to the clean and efficient energy Utah should be moving towards. I am a student from the Salt Lake Valley and Utah's air pollution is key concern I believe Utah needs to address. Hindering the expansion of the solar energy is hindering Utah's chance at having clean air and protecting the environment which we all live in. I understand how Rocky Mountain Power should be concerned with their market share shrinking, however, unfairly trying to block its competitors and slowing Utah's clean energy movements are simply unacceptable. There have also been several articles and studies from other areas of the United States that show the value solar energy has to the power system and these should also be considered in your decision.

I appreciate your willingness to accept public input. I would ask that the PacifiCorp-Rocky Mountain Power's current rate change request be rejected. I believe the commission will do the right thing and prevent the growth of monopolies and continue to support the clean energy movement in Utah. Please prove me right. I am just one of thousands of other concerned students in Utah that are deeply invested in the clean energy movement.

Thank you again,

Jackie Sullivan

We are currently installing rooftop solar panels on our home in Salt Lake County. It would not have made financial sense to do this with the new net metering rates that Rocky Mountain Power is proposing. This sensible and clean approach to producing electricity will be killed in Utah. Please think of our terrible local pollution issues and do the right thing - do not approve this clean energy killing request. Thank you.

Jared Jacobson <jared.jacobson@gmail.com>

Wed, Nov 23, 2016 at 4:05 PM

To: psc@utah.gov

Commission,

I have read Rocky Mountain Power's report outlining their proposed rate hikes and their rationale for it. I am opposed to this rate hike. The tariff should not go forward, and Rocky Mountain Power should continue with the current per-watt fee structure. While their request for administrative fees to process applications for net metering is fair, an increase in rates on net-metered power customers is unjustified and harmful to business within the state, as it will have a quelling effect on the uptake of solar.

While my photovoltaic system would be grandfathered under the proposed plan, I know a number of other people who are considering solar right now, and if the cost-benefit analysis extends the payback period, they will be much less likely to install. Implementation of this plan would make it harder for me to justify putting solar on my next house. Do we really want to be raising the barrier to clean energy at a time when we're having some of the worst spikes in air pollution in history?

RMP's concerns about the exponential growth are unjustified. There are many houses whose roofs are not oriented for maximum solar collection. It is doubtful that many of these houses will ever install a photovoltaic system because of the longer payback period even under the current rates. Exponential uptake is a feature of early growth in any technology. For example, the growth in cell phone usage in the United States has slowed as the market reaches saturation, which happens at the point where the economics don't make sense. All RMP's proposal will do is lower the cap where the economics make sense, ultimately reducing the number of people providing power to the grid.

I find RMP's statement that photovoltaic power generation doesn't match peak need to be disingenuous at best. On page 13 of the report it says, "This solar generation often does not coincide with the Company's peak load, thus only minimally reducing that load. Company witness Mr. Marx testifies that a net metering customer's peak production occurs during the spring months while their peak load, and that of other customers, occurs during the summer months. These factors necessitate increasing the size of the distribution facilities as a result of net metering."

When I look at my power usage for the two years prior to installing our PV system, we used 878 and 741 kWh in April 2012 and April 2013. In April of 2015 and 2016, we supplied 358 and 478 kWh to the grid. So for these months the net energy difference is $((878+741) - (-358 + -478))/2 = 1227.5$ kWh for those months. We used 2640 and 2466 kWh in July of 2013 and 2014. In July 2015 and 2016, we used 607 and 807 kWh — a net energy difference of $((2640+2466) - (607+807))/2 = 1846$ kWh for those months. So July, the month with peak load, coincided with peak production. Mr. Marx's statement that our peak production occurs during the spring months is false, as is the conclusion that RMP needs to increase the size of distribution facilities as a result of net metering. There is no reason to believe that our PV system is unique in this regard.

RMP's argument in this regard is specious, anyway, because prior to having the solar panels installed our house was consuming an average of 2500 kWh during peak months and it is now consuming an average of 700 kWh. How can RMP need to increase the size of their distribution facilities when the peak load on them is shrinking? Also, during the times when our PV system is overproducing, it reduces usage on the infrastructure required to provide electricity to my neighbors. Clearly, RMP cannot provide unbiased data or conclusions in this matter.

If it is true that as a solar customer I am not paying for my fair share of the power distribution infrastructure (which I doubt, and RMP has every incentive to mislead you on this), the difference should be made up solely in a fixed monthly fee that covers the costs of maintaining the infrastructure -- a cost that should be borne equally by all electricity customers. I am already paying a fixed fee for basic service and a number of other fees that I don't even know the purpose of. We also pay for the electricity we consume. I should not be assessed an extra per watt fee because I'm using less electricity.

I think RMP is also overstating the amount of their loss (which isn't even a loss, really , just an unrealized gain) from electricity generation. They have benefited in the past from my overproduction because the company clears any remaining solar credits in February, for which I am uncompensated. Both Februarys since installing the solar panels they have overproduced, resulting in me providing 44 and 43 kWh of power that RMP did not have to pay for

Why is the period for public comment so short? RMP submitted their 488-page report barely two weeks ago, and I understand that today is the last day for public comment. It takes time to digest 488 pages and more of technical, financial, and legal material -- time that the people of Utah have not been granted with a mere two-week comment period.

Nevertheless, thank you for allowing and considering public comments on this matter, since it affects all of us in Utah with regard to our quality of life, our pocketbooks, and the industry we attract to the state. Please listen to the people of the state and reject RMP's request to hike electricity rates on their monopoly .

Jared Jacobson

Dan Syroid <dsyroid@gmail.com>

Wed, Nov 23, 2016 at 4:20 PM

To: psc@utah.gov

To Public Service Commission

Thanks for taking my input on the pending ruling on rooftop solar.

I strongly oppose PacifiCorp-Rocky Mountain Power's Advice No. 16-13.

Roof top solar is an important addition to our endangered air quality and environment and should be strongly incentivised and definitely not discouraged.

Solar users have already made a significant financial commitment by installing solar panels.

A fee to new solar users would have a devastating impact on new solar installations, affecting not only our environment, but causing job losses in the solar install business, which employs more workers in Utah and the nation than the coal industry. See reporting below:

<http://www.deseretnews.com/article/865649149/As-Utah-coal-slumps-solar-energy-booms.html?pg=all>

<http://fortune.com/2015/01/16/solar-jobs-report-2014/>

As a solar user myself, I use solar power to charge my Chevy Volt so that when I drive I do not pollute (most of the time).

I encourage the PSC to look to the future. Solar and electric vehicles charged by the sun are the future and will enable the Wasatch front to clean up our dirty air.

Look at what happened in Nevada when similar solar fees were implemented. Huge job loss in the solar industry and the people were very upset.

<http://fortune.com/2016/01/14/nevada-solar-battleground/>

I would encourage PSC to strongly urge Rocky Mtn Power to phase out coal power and move to huge increases in solar, wind and geothermal power, backed up with multiple 100 KWHr Li-ion power packs that are available from Tesla Energy now.

In any case **please, please** do not allow this very bad idea of a fee on solar to go forward.

Respectfully submitted,

Dan Syroid

Benji Xochimitl <bxochimitl@gmail.com>

Wed, Nov 23, 2016 at 4:29 PM

To: psc@utah.gov

Dear Commissioners,

I am in direct opposition to Rocky Mountain Power's proposition, "Advice No. 16-13", which was filed Nov. 9, 2016, regarding the change in rate structure for rooftop solar customers. Of the Public Service Commission, I insist that the tariff be suspended and prevented from being implemented. Rocky Mountain Power should be held with the same regard as any other energy company, and should follow the standard process for applying rates.

I believe that solar power allows people to generate reliable, clean energy without having to draw or depend upon the community. It provides dynamic, alternative energy solutions in case of unforeseen problems with the power grid. It is neither practical nor just for Rocky Mountain Power to raise rates for those who take an interest in residential rooftop solar power, simply to maintain a profit: such an action directly, negatively affects both the people (in quality of life) and the climate. I believe that alternative, clean energy needs to be pursued and implemented as aggressively as possible, and one way to do that is to enable people to draw from solar power.

I offer my thanks for allowing me to speak regarding this topic and for taking it into consideration. Please serve the interests of the people and of those investing in solar power equally; please reject Advice No. 16-13.

Many thanks,

Benjamin Xochimitl

Dear Commissioners,

I'd like to voice my strong opposition to the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process. Additionally, we need to keep the role of this public sanctioned monopoly in its proper place - that is to service the community at a fair and reasonable return, not line its pockets on our backs.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution. We should be making policy choices that advance that, not destroy it.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

*Sincerely,**Gregg Lehtonen, gl_65@yahoo.com, Park City, UT.*

**PublicService Commission <psc@utah.gov>**

Docket #16-035 T14 Comment

Dear Commissioners,

I oppose the proposal from Rocky Mountain Power, Advice No. 16-13 filed Nov 9, 2016. Those that have invested thousands of dollars in roof top solar panel systems and those who plan to invest are at a severe disadvantage when the normal rate process is not used to get input and have understanding with the Utility.

It is good to accept public input on this critical and important issue. It seems that the interest of ratepayers and the Utah public should be on equal footing with Rocky Mountain Power through the normal process of rate review and rate setting. You should reject Advice No. 16-13.

Thank You,

Steve & Evon Crofts, stevemcrofts@gmail.com, North Salt Lake Utah, 84054
