Dear Commissioners,

I live in the Salt Lake valley and ask you not only to reject RMP's solar rate increase proposal but make it clear we support renewable energy sources. We live in a valley that has long had a pollution issue and need to actively promote renewable clean energy. I have several friends in the valley that obtained solar and installed enough panels to power their electric cars. This is a good direction for us. I believe those willing to make a financial commitment for a cleaner environment should be supported. RMP has responsibility to its shareholders but fortunately we have an oversight body that represents the public good. Please make it clear to current/future investors in clean renewable energies that they are our future.

Thank you for your time,
Victor Pezzolla

Solar Power Grab

1 message

To: psc@utah.gov

Dear Commissioners,

I support the recent proposal from Rocky Mountain Power "Advice No. 1613", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to go forward with tariff and allow it to take effect on December 9 as Rocky Mountain Power has proposed.

If people want to install solar panels let them pay the full price and not be subsidized by other power ratepayers and/or taxpayers.

You cannot shift cost burdens of solar power onto all power users without good reason. Solar power despite strong advocacy cannot supply that kind of guidance. While solar may be clean, it is not very useful in that it only supplies power about 20% of the time during an average year. Contrast that with utility-grade power facilities, easily operating above 60 to 70% and many times much more, and you'll discover it's a very small contribution, and it has a negative effect on the power grid by disrupting normal power supply planning.

In effect, what the environmental community is asking us to do is to build two power plants instead of one. One, that is scattered around wealthy communities and only produces power under ideal conditions and the other, likely fossil fueled, that provides power around-the-clock throughout the year. When you take into account all the economic resources required to build and install solar power sites the tiny contribution they make is zeroed out or perhaps in the negative.

We cannot save the planet with "clean energy" just because people say we can. Those sources of energy, wind and solar, will not help us on a cold winter's night when the wind does not blow. This should be self-evident.

C.J. Smith

Hello, I would like to submit comment pertaining to the Rocky Mountain Power petition for impact to solar users.

Rocky Mountain Power is asserting the infrastructure cost is unfairly being funded by traditional customers not using solar due to solar users receiving credit for generating power and in turn lower power bills, which the petition appears to target new customers for additional fees who want to implement solar post Dec 2016 and change the credit rate when solar over-production gets shared to the grid.

1) Solar is already a very costly investment with 15+ yrs payback period using current credit rates. The technology of cells and deterioration of cells with age drives replacement at or not far from this payback period. The proposed changes will not only extend the payback period well past 20 yrs, it will deter consumers from implementing environmentally helpful technologies due to entry cost plus the lack of payback.

2) Rocky Mountain Power asserts the following:

- a. They claim net metering customers underpay to cover the infrastructure costs by \$400 annually. My system saves me approximately \$1000 annually so they are stating 40% is infrastructure maintenance. Wow, that's a pretty high figure. Would be nice to know what this infrastructure cost is as I never see the power company in the 5 yrs I've been in my home. They also claim they provide the same level of customer support to net metering and traditional customers. Funny, I don't know what customer service they've provided as I haven't spoken to anyone or had face to face contact for 5 yrs in my home so what value is this service they speak of.
- b. They claim to require a \$15 fixed charge for customer service and meters. Odd, I recall paying extra for my net meter when it was installed. Gotta wonder what the \$15 is really for.
- c. They propose a reduction in net metering credit from existing levels of 8.85-14.5 cents per kwh to 3.81 cents per kwh. This is a 57-74% reduction in net credit per kwh. This is a pretty big pill to swallow and also difficult to believe loss of revenue to this extent and infrastructure need.
- d. The comparable bill they propose pre and post net metering rate change is \$55 current to \$74 proposed which is a 35% increase. They claim traditional user would be \$114/mo.
 - i. In rebuttal to this, I would like to note they are attacking a single technology (solar). They have completely overlooked the revenue impact for other technologies like bulbs. Simply changing from incandescent to CFL results in 75% savings and changing to LED's is 90% savings relative to incandescent. So they are holding solar hostage simply because they have control of the metering and want a 35% increase due to lost revenue yet the hardware within a home has a much bigger impact. Why not go after homes which have LED's as they are not paying as big of bills either and in a much more significant way. Or what if someone opts to go with candles, what then. Have to ask why stop at solar if going to blame technology for causing revenue reduction.

1. The post service didn't get higher rates due to emails, they had to adjust their model and adapt

2. I have solar hot water yet the gas company isn't chasing after me since I am using less gas due to solar assist
3. I've wanted to install wind power, would they then go after that and tax based on average wind speed in the area?
4. What about home wall insulation or sun tunnels so a user doesn't have to power excessive lights or heating/AC systems. Will they tax a user if their insulation R value is above a certain number since they'd be taking away revenue?
5. What about someone who has off grid system with ability to switch over? They wouldn't have net metering yet still have a traditional meter. Tax the batteries?
6. Where does it stop?

Technology and living in general is changing yet RMP does not want to adapt their model for what is driving the future. Those residences and businesses trying to do good and reduce pollution and use "free" energy are being punished. If this proposal by RMP goes through it will be another mark for politics and big business making claim they do not have the best interest of the society in mind. The sun and wind is free yet the monopolistic energy groups are taxing. Please help prevent taxing on free energy sources, particularly when the cost to implement these technologies is already very costly.

Thank you and I will keep in mind the public hearing 8/9/17 2PM and will watch docket status at psc.utah.gov.

Dear Public Service Commission,

Please reject Rocky Mountain Power's proposal to implement demand charges on solar customers. Demand charges are confusing and extreme.

Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state's regulatory body or withdrawn entirely.

Solar customers and businesses need certainty. RMP's proposal puts local solar jobs across the state at risk. Please reject RMP's demand charges proposal and keep existing rates for rooftop solar customers.

Regards,
Forrest Cuch

Dear Public Service Commission,

Please reject Rocky Mountain Power's proposal to implement demand charges on solar customers. Demand charges are confusing and extreme. They serve only to discourage the transition to renewable energy which is desperately needed to be able to survive the coming changes in climate and government. People will not be able to afford energy when Trump and his cronies get through with raping this country.

Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state's regulatory body or withdrawn entirely.

Dear Public Service Commission,

As a ratepayer in Utah, I urge you to please reject Rocky Mountain Power 's solar proposal, which will endanger the growth of the solar industry and threaten local jobs across the state. RMP' s extreme demand charge proposal will make it difficult for me and my family to control our energy bills.

Another Berkshire Hathaway subsidiary, NV Energy, proposed similar demand charges on solar customers last year , and the Nevada Public Utilities Commission rejected the implementation of those charges. Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state' s regulatory body or withdrawn entirely.

Please reject Rocky Mountain Power 's proposal to implement these unprecedented and unpredictable charges on solar customers. I urge you to support balanced policies that will spur market competition and local economic growth, and bolster consumer choice.

Request (Closed): Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

Request (Closed): Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. Not only is the discussion and approval process being subverted, the fees are among the highest proposed by any utility around the nation on rooftop solar customers. It's obvious that such a rate structure would effectively end the growth of rooftop solar and devastate the solar industry in Utah. It is also apparent that due consideration of information to and from the public is pointedly being avoided. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. A number of these jobs as well as the economic impact are the future of my students. Those will be negatively affected if these fees are put into place. I am aware of the consequences to the Nevada industry when their commission imposed outrageous fees on owners. Overnight, hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth. If these fees are imposed, one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time and consideration.

Subject: Public Service Commission

Request (Closed): Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

Request (Closed): Dear Governor Herbert, As a Utah residents and homeowners with an installed photovoltaic solar array, we are writing to urge you go on record opposing PacificCorp's request to cancel immediately net-metering and to require new PV customers to a pay according to a prohibitively high rate. We also urge you to work with the Utah legislature to modify the Utah statutes that set rules for the PSC cost/benefit analysis so it takes into proper account external economies. 1. The company has chosen an expedited path to setting new rates without going through the more conventional public comment period including expert testimony. The issues here are too important and controversial to allow such an end run. On this ground alone, the request for expedited review and approval should be denied. 2. The company's avoided-cost calculations are based on expensive proprietary software models that are not available for public scrutiny and critique. The calculations must be reviewed by an independent body of experts. At the very least, the PSC should put off a decision until such an independent review can be made. 3. I strongly suspect that external economies have not been included in the cost/benefit accounting, but they must be, even if based only on well-founded estimates. Burning of fossil fuels degrades our air quality, and it is wreaking havoc around the world on wildlife, plants, and humans. *Not to include these external costs is fraudulent accounting*. We list some more external economic costs in 4 and 5 below. 4. The proposed change would make it too expensive to justify new installations. It would effectively shut down Utah's rapidly growing solar industry, resulting in the loss of several thousand Utah jobs. One has only to look at what happened to Nevada's solar industry when net metering was attacked there. 5. A warming climate is already hurting Utah's winter sports industry and will very likely kill it in the coming decades if we don't break world dependence on fossil fuels. The impact on Utah's economy will be devastating. Of all places, Utah should take the lead in this transformation of energy production. 6. We understand that our own net metering plan will be unaffected by the proposed change, but changing the rate structure for new customers as proposed is likely to set a precedent that will encourage PacificCorp to come after existing customers in the near future. "Divide and conquer" is a nefarious tactic. 7. Although this proposal is framed as a way to make the rate structure fairer to non-solar customers, I assert that the real driver of this proposal is that PacificCorp's profits are tied to power sales, and with reduced sales, company profits are decreasing. The whole industry has taken a position opposing residential solar power generation. This proposal is consistent with that position. 8. Home-generated solar power is a disruptive technology that is creating drastic changes in the power industry. The correct regulatory response to dealing with disruptive change is a disinterested and complete analysis of costs and benefits, coupled with an informed revision of regulatory legislation. The industry response should be not to stifle innovation, but to play along with it -- for example, by improving load balancing by replacing burners in coal-fired plants with new high-efficiency energy-storage technology and by modernizing our dangerously antiquated power grid. We would support rate changes that provide for a reduction in fossil-fuel burning. Thank you for considering our remarks. Sincerely, Carleton DeTar Laurel Casjens

Thank you.

Constituent Services.

Dear Public Service Commission,

Please reject Rocky Mountain Power's proposal to implement demand charges on solar customers. Demand charges are confusing and extreme.

Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state's regulatory body or withdrawn entirely.

Solar customers and businesses need certainty. RMP's proposal puts local solar jobs across the state at risk. Please reject RMP's demand charges proposal and keep existing rates for rooftop solar customers.

Dear Public Service Commission,

Please reject Rocky Mountain Power's proposal to implement demand charges on solar customers. Demand charges are confusing and extreme. They already steal power by issuing credits instead of cash for the annual overages don't let them take it all away!

Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state's regulatory body or withdrawn entirely.

Solar customers and businesses need certainty. RMP's proposal puts local solar jobs across the state at risk. Please reject RMP's demand charges proposal and keep existing rates for rooftop solar customers.

Regards,
Joshua Malan

Dear Public Service Commission,

As a ratepayer in Utah, I urge you to please reject Rocky Mountain Power 's solar proposal, which will endanger the growth of the solar industry and threaten local jobs across the state. RMP' s extreme demand charge proposal will make it difficult for me and my family to control our energy bills.

Another Berkshire Hathaway subsidiary, NV Energy, proposed similar demand charges on solar customers last year , and the Nevada Public Utilities Commission rejected the implementation of those charges. Across twelve states, all investor owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state' s regulatory body or withdrawn entirely.

Please reject Rocky Mountain Power 's proposal to implement these unprecedented and unpredictable charges on solar customers. I urge you to support balanced policies that will spur market competition and local economic growth, and bolster consumer choice.

Regards,
Rebekah Bryner
