

Wind Repowering Technical Conference Questions – Docket No. 17-035-39

PSC Staff Questions

Direct Testimony of Rick Link, lines 349-359, regarding model de-rates to PacifiCorp’s 230-kV transmission system: In the context of this section, please: 1) explain how PacifiCorp determined the “average de-rate of 146 MW over approximately 88 outage days per year;” and 2) identify the de-rate causes for the referenced line and their associated transmission system elements.

Direct Testimony of Rick Link, pp. 18-22, Annual Revenue Requirement Modeling Methodology: Please review the use of nominal and levelized values in the analyses presented in this section.

Direct Testimony of Rick Link, lines 601-605 and 699-702: Please explain how PacifiCorp determined its estimates of the values assigned to the incremental RECs generated from the repowered wind facilities through 2036 and through 2050.
