Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Carly Stocks

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Michelle Jenkins

Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

To: psc@utah.gov

Dear UT PSC,

Given the enormous operating costs of coal--and the falling demand for this type of electricity due to its detrimental impacts on human health and the environment--the price per megawatt is simply not cost competitive with renewables. Lazard's recent "Levelized Cost of Energy" (LCOE) illustrates this fact, and that the levelized cost of utility-scale solar is cost competitive even with energy efficiency!

When I look at this report, I see a huge opportunity for Rocky Mountain Power. Choosing to develop utility-scale solar that allow the closure of coal plants is in the best interest of Utah and Utahns, and the utility in both the short and long term. Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Nallely Bojorquez

To: psc@utah.gov

Dear UT PSC,

In Utah we want clean air and investment in renewable energy. We need much more than a 20% long term investment in wind and solar. Utah's coal plants are losing money and the citizens of Utah are paying for these inefficient and uneconomic plants. Rocky Mountain Power needs to look forward to the future and not backwards to a coal plants which will be phased out.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Dear UT PSC,

During the twenty years that I worked for an oil/gas company (1980-2000), oil was king and this country profited from that, but that was then, and now is now. We've seen the effects of fossil fuels on our environment and need to move on. Rocky Mountain Power does its customers no favor by not moving forward into a new, cleaner future. Please...do what's right for Utahns!

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Dear UT PSC,

Help us all breathe easier in the future. Do the right thing, PLEASE!

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Shanin Rapp

Dear UT PSC,

Surely Utah can do better than this! Why not invest in smaller, regional solar/wind farms to allow some much needed seasonal backup in Southern Utah during the peak usage months? How about solar parking lots along SR-9 with recharging facilities for electric vehicles?

Please talk to Rockville about this.

Barry Sochat, Rockville Town Council

Dear UT PSC,

Renewables are the fuel of the future, don't be stuck in the past with coal. At the very least convert these uneconomic coal plants to natural gas. At least then the pollution and health risks from coal plants will be greatly reduced.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Caralyn Anderson

Dear UT PSC,

We are already suffering from our polluted air, especially on the Wasatch Front. Utah citizens overwhelmingly support a change to cleaner , renewable energy sources. PLEASE be open to this change and take aggressive action towards modernizing and cleaning up our beautiful state. We deserve cleaner fuel!

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Jack Marston

Dear UT PSC,

I also have concerns about additional, unnecessary energy development in Utah's beautiful public lands, in addition to air quality concerns.

Please, let's ensure that Utah and Rocky Mountain Power lead the way into a better, cleaner energy future. Thank you. Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Evan Johnson

According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Amy Taylor (amy@amytaylor.us) Sent You a Personal Message <automail@knowwho.com> Fri, Nov 10, 2017 at 8:06 AM
To: psc@utah.gov

Dear UT PSC,

Our children's future lies in the balance: we need to be able to breathe to grow, and continued use of coal is leaving us both literally and figuratively in the dust. The particles in the air are unbreathable, and the economy will soon be untenable if we continue to lose money on energy as the state grows. We MUST turn toward the many great jobs wind and solar provide while cleaning the environment for our families and preserving the beauty of our state.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

To: psc@utah.gov

Dear UT PSC,

I support clean energy to the extent of having shelled out over \$23,000 personally to convert to solar power at my home. Based on the number of home installations in Moab and around the state, I believe there are a good many like-minded folks who want to see renewable energy replace the coal-fired plants which pollute our air and water. It's time for Utah and RMP to step up and join the 21st century in a more responsible approach to energy production.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Dear UT PSC,

I have been a Solar Advocate since the early '80's and this business (Rocky Mountain Power) which has no interest in both the present nor of future of the environment, the impacts of continued fossil fuel use as a health issue and the tremendous advantage of solar energy/clean energy potential has got to stopped. When our energy providers no longer present a viable plan for future energy concerns it's time to either replace them or curb them thru political legislation. thank you. gp

Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Keisha Echevarria

According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Justin Grover

Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Dear UT PSC,

I am for healthy jobs for former fossil fuels workers, and support free lifetime community college, at the very least for economically displaced populations. It is Utah government's responsibility to provide workplace ladders and lateral passages in partnership with employers. Clean air and water and abundant natural resources are also essential to prevent mass illness and early deaths.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Glen Kuball

Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Brent Marrott

Dear UT PSC,

We need clean air, especially in areas susceptible to winter and summer inversions. Clean air should be a priority in Utah, the health of Utahns is at risk.

According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Dear UT PSC,

Utah needs to lead in developing and using clean energy -- including wind and solar. Rocky Mountain Power must be told that they must act in the public interest and stop using our ratepayers' money to sustain pollution that damages our health. Force Rocky Mountain Power to tell the truth about their coal-fired plants and their reluctance or refusal to work harder on wind projects and solar projects. They are doing that in Wyoming! Why is Utah lagging so far behind? Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Pat Pfeiffer

Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Dear UT PSC,

Gentlemen, We who live in Utah love our state! We love our beautiful parks, open spaces, our homes and communities. We have begun to notice something extremely scary and concerning for the past few years since your company took over from Utah Power and Light Co.? The air we breathe has become more and more filled with a yucky yellowish brown tinge to it. Especially in the winter time and there is an ugly smelly odor near our refineries and energy producing plants both coal and gas. When you company took over we thought that since you were from Scotland and England that you would still care about our children, our elderly, our citizens with lung complications and our most vulnerable. Evidently not SIRS!!! We see you take our money every month with no reinvestment in a cleaner air future!!! Scotland must be fine, but the intermountain Wasatch Front just continues to get worse and worse ever since you took over. Folks this is 2017 and we need improvement now, not in a hundred years!!!!!! Some needs to stick your ugly lips over your smoke spewing exhaust pipes near your generators. Maybe then you will begin to understand that we don't want your nasty, killing Air. We don't want your lack of care for our communities. We just want you to leave NOW WOULD BE JUST FINE YOU FREAKING JERK FACED ASSHOLES!!!!!!!!!!

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Adele Breeden

Dear UT PSC,

I don't understand why Rocky Mountain has this poor plan. Economically it doesn't make sense. In addition the air pollution is a big problem as is producing carbon dioxide. Why aren't you addressing the future?
Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind repowering and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Holly Molberg

Dear UT PSC,

We have such an issue with our air quality you would think that Rocky Mountain would want to help with that situation by becoming a leader with clean energy, but it has always been about the money here in Utah. Just hoping one day companies and its leaders will wake up to what is the right thing to do.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,
