REVENUE REQUIREMENT / COST RECOVERY BACKGROUND.....	4
TAX RATE UNCERTAINTY	15
IMPACTS OF RENEWABLE ENERGY CREDITS	22

REDACTED

1 **INTRODUCTION**

2 **Q. WHAT IS YOUR NAME, OCCUPATION AND BUSINESS ADDRESS?**

3 A. My name is Donna Ramas. I am a Certified Public Accountant licensed in
4 the State of Michigan and Principal at Ramas Regulatory Consulting, LLC,
5 with offices at 4654 Driftwood Drive, Commerce Township, Michigan
6 48382.

7 **Q. HAVE YOU PREPARED A SUMMARY OF YOUR QUALIFICATIONS
8 AND EXPERIENCE?**

9 A. Yes. I have attached Appendix I, which is a summary of my regulatory
10 experience and qualifications.

11 **Q. ON WHOSE BEHALF ARE YOU APPEARING?**

12 A. I was retained by the Utah Office of Consumer Services (Office) to review
13 Rocky Mountain Power's (the Company or RMP) request for approval of a
14 significant energy resource decision relating to construction or
15 procurement of new wind facilities and voluntary request for approval of
16 various transmission facilities. Accordingly, I am appearing on behalf of
17 the Office.

18 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

19 A. I primarily address the Company's request to establish a Resource
20 Tracking Mechanism ("RTM") to recover the revenue requirement impacts
21 of the proposed new wind projects and transmission projects. I also
22 discuss potential changes in tax law that could impact the economic

REDACTED

23 analysis of the projects at issue in this docket. Finally, I discuss the ability
24 of the new wind projects to increase future Renewable Energy Credit
25 (REC) revenues received by the Company.

26 **Q. DO YOU ADDRESS WHETHER OR NOT THE PROPOSED NEW WIND**
27 **PROJECTS AND THE PROPOSED NEW TRANSMISSION PROJECTS**
28 **SHOULD BE APPROVED BY THE COMMISSION AS PRUDENT AND**
29 **IN THE PUBLIC INTEREST?**

30 A. No. Office witness Phil Hayet addresses the projects and the Company's
31 request that the projects be approved as prudent and in the public interest
32 in his direct testimony. My testimony focuses on the new RTM proposed
33 by the Company and risks associated with potential changes to tax law.

34 **Q. WHAT IS YOUR RECOMMENDATION REGARDING THE NEW**
35 **RESOURCE TRACKING MECHANISM PROPOSED BY RMP IN THIS**
36 **CASE?**

37 A. I strongly recommend that the proposed new Resource Tracking
38 Mechanism be rejected by the Commission. There is no need to establish
39 a complex recovery mechanism that would shift risk away from RMP's
40 shareholders to its ratepayers and add substantial complexity to the
41 regulatory process. If the Company goes forward with the wind and
42 transmission projects being considered in this docket and the projects
43 cause the Company to not be able to earn its authorized rate of return,
44 adequate means exist to address the revenue requirements associated
45 with the projects without the need to establish an RTM.

REDACTED

46 **Q. BESIDES THE LACK OF NEED TO ESTABLISH A COMPLEX NEW**
47 **REGULATORY RECOVERY MECHANISM, IS THERE ANOTHER**
48 **COMPELLING REASON THAT THE RTM SHOULD BE REJECTED?**

49 A. Yes. The Company's last application for an increase in retail rates before
50 this Commission was filed on January 3, 2014 in Docket No. 13-035-184.
51 RMP's application in Docket No. 13-035-184 utilized a historic base year
52 ended June 30, 2013 and a future test year ending June 30, 2015. The
53 direct testimony of RMP witness Cindy A. Crane in this proceeding
54 indicates that the Company is proposing to invest \$2 billion in new wind
55 and transmission facilities that would become operational by December
56 31, 2020.¹ Exhibit RMP__(JKL-3), at page 1 of 5, provided with the Direct
57 Testimony of RMP witness Jeffrey K. Larsen shows that the Company
58 projects \$2,084,848,000 will be placed in service in November 2020. The
59 projects at issue in this case, exceeding \$2 billion, are anticipated to be
60 placed into service more than seven years after the historic base year
61 evaluated by the parties in RMP's most recent rate case and more than
62 five years after the end of the future test year considered in that rate case.

63 In Docket No. 17-035-39, RMP is also requesting that over \$1
64 billion of capital costs associated with proposed wind repowering projects
65 be recovered through an RTM. Given the amount of time that has elapsed
66 since a detailed and rigorous review of RMP's revenue requirements was

¹ Direct Testimony of Cindy A. Crane, lines 21 – 23.

REDACTED

67 performed, coupled with the over \$3 billion in investments at issue in this
68 docket and Docket No. 17-035-39, it is my opinion that it is not reasonable
69 to allow for the recovery of these significant investments through a
70 recovery mechanism outside of base rates. Too much time has elapsed
71 and will continue to elapse between the base year and the future test year
72 utilized in the most recent rate case and the date the substantial
73 investments at issue in the current docket and Docket No. 17-035-39 will
74 be placed into service to assume that current base rates PLUS additional
75 amounts to be collected via the proposed RTM will result in fair and
76 reasonable rates to RMP's Utah ratepayers.

77 **REVENUE REQUIREMENT / COST RECOVERY BACKGROUND**

78 **Q. WOULD YOU PLEASE PROVIDE A GENERAL DESCRIPTION OF HOW**
79 **RMP RECOVERS COSTS ASSOCIATED WITH PLANT USED IN**
80 **PROVIDING SERVICE TO ITS UTAH CUSTOMERS?**

81 A. Yes. In establishing revenue requirements in a general rate case
82 proceeding, prudently incurred plant that is used and useful in providing
83 service to RMP's utility customers is included in plant in service. The plant
84 in service balance, less the associated accumulated depreciation reserve
85 balance and less the associated accumulated deferred income tax
86 ("ADIT") balance is included in rate base upon which the rate of return
87 found to be just and reasonable by the Commission is applied.
88 Additionally, the associated impacts of the plant found to be prudent on

REDACTED

89 net operating income are also included in the revenue requirement
90 determination. This would include various net operating income impacts,
91 such as costs of operating and maintaining the plant, property taxes
92 associated with the plant, and depreciation expense associated with
93 depreciating the plant asset over its projected life.

94 During a general rate case, all elements of the revenue requirement
95 calculation are matched to a consistent period to ensure that a
96 synchronized approach is used in setting rates. Thus, rate base,
97 revenues, expenses and income taxes are all synchronized using a
98 consistent test period. As mentioned above, in matching the elements of
99 the revenue requirement calculation in the last rate case application filed
100 by RMP in Utah, the Company used a future test year ending June 30,
101 2015.

102 **Q. HOW DOES THE COMPANY RECOVER COSTS ASSOCIATED WITH**
103 **NEW PLANT THAT IS PLACED INTO SERVICE AFTER THE TEST**
104 **PERIOD USED IN DETERMINING THE REVENUE REQUIREMENT AND**
105 **SETTING BASE RATES, SUCH AS PLANT PLACED INTO SERVICE**
106 **ONE OR TWO YEARS AFTER THE TEST PERIOD?**

107 A. Many aspects of the Company's operations change between rate case
108 proceedings. While new plant is being added, existing plant continues to
109 be depreciated, and the associated accumulated deferred income tax
110 balance may grow. As the existing plant is depreciated, the net balance
111 associated with the plant declines. Older plant may also be retired.

REDACTED

112 Between rate cases, the amount of revenues will change, as will
113 expenses. These changes do not occur in isolation. Depending on the
114 specific circumstances, utilities may often go years between rate case
115 proceedings, even though they are adding plant during the interim years.
116 Other changes in the components of the overall revenue requirement
117 calculation may offset the impact of the increase of plant in service caused
118 by new plant investment.

119 **Q. THE PLANT ADDITIONS PROJECTED BY RMP ASSOCIATED WITH**
120 **THE NEW WIND AND NEW TRANSMISSION PROJECTS AT ISSUE IN**
121 **THIS CASE ARE FAIRLY SUBSTANTIAL. ABSENT THE COMPANY'S**
122 **REQUESTED RESOURCE TRACKING MECHANISM BEING**
123 **APPROVED, WHAT OPTIONS DOES THE COMPANY HAVE TO**
124 **RECOVER THE COSTS ASSOCIATED WITH THE PROJECTS?**

125 A. If the Company projects that new plant being added or other changes in
126 the components of the revenue requirement equation will cause it to be
127 unable to earn a fair and reasonable rate of return on its investments, the
128 Company has the ability to seek to change its base rates by filing a rate
129 case. As the Company has the ability to utilize a future test year in rate
130 case filings, it would have the opportunity to include large new plant
131 investments, such as the new wind and new transmission projects, in
132 rates during the period such plant is placed in service or soon thereafter if
133 it projects that the new plant being added will cause it to under-earn.

REDACTED

134 **Q. CAN YOU PLEASE ELABORATE ON THE TEST YEAR OPTIONS AT**
135 **THE COMPANY'S DISPOSAL?**

136 A. Yes. Section 54-4-4(3) of the Utah Statutes specifically states:

137 (a) If in the commission's determination of just and reasonable rates
138 the commission uses a test period, the commission shall select a test
139 period that, on the basis of the evidence, the commission finds best
140 reflects the conditions that a public utility will encounter during the
141 period when the rates determined by the commission will be in effect.
142

143 In addressing the establishment of the test period for use in determining
144 just and reasonable rates, Utah Statutes Section 54-4-4(3) specifically
145 states:

146 (b) In establishing the test period determined in Subsection (3)(a),
147 the commission may use:

148 (i) a future test period that is determined on the basis of
149 projected data not exceeding 20 months from the date a
150 proposed rate increase or decrease is filed with the
151 commission under Section 54-7-12;

152 (ii) a test period that is:

153 (A) determined on the basis of historic data; and

154 (B) adjusted for known and measurable changes; or

155 (iii) a test period that is determined on the basis of a
156 combination of:

157 (A) future projections; and

158 (B) historic data.
159
160

161 Thus, under the statutory language, if a future test year will best reflect the
162 conditions the Company will encounter during the rate effective period, the
163 Company has the ability to request a future test year as long as the ending
164 date of the test year does not exceed 20 months from the date the case is
165 filed.

REDACTED

166 **Q. WOULD THE ABOVE QUOTED STATUTES PROVIDE THE COMPANY**
167 **THE OPPORTUNITY TO RECOVER THE COSTS ASSOCIATED WITH**
168 **THE PROPOSED NEW WIND AND NEW TRANSMISSION PROJECTS**
169 **IN RATES THROUGH A GENERAL RATE CASE?**

170 **A.** Yes. If the Company forecasts that it will not earn its authorized rate of
171 return once the projects are placed into service, when taking into account
172 its internal forecasts for all components of the revenue requirement
173 equation, it has the ability to submit a rate case filing requesting authority
174 to increase its retail electric utility service rates. The Company projects
175 placing the new wind and new transmission into service in late 2020,²
176 which is almost three years from the current date. Thus, RMP will have
177 ample time to prepare a rate case utilizing a test period that would capture
178 the impacts of the projects.

179 **Q. WHILE THE WIND REPOWERING PROJECTS BEING ADDRESSED IN**
180 **DOCKET NO. 17-035-39 ARE NOT AT ISSUE IN THIS CASE, THE**
181 **COMPANY'S REBUTTAL FILING IN THAT DOCKET SHOWS PLANT**
182 **ADDITIONS OF \$1.08 BILLION GOING INTO SERVICE BETWEEN**
183 **JULY 2019 AND DECEMBER 2020.³ IF THE COMPANY GOES**
184 **FORWARD WITH THE NEW WIND AND NEW TRANSMISSION**
185 **PROJECTS BEING CONSIDERED IN THIS CASE AND THE WIND**

² Exhibit RMP___(JKL-3) provided with the Direct Testimony of Jeffrey K. Larsen shows the projects as being included in plant in service in November 2020.

³ Docket No. 17-035-39, Exhibit RMP__(JKL-3R) provided with the Rebuttal Testimony of Jeffrey K. Larsen.

REDACTED

186 **REPOWERING PROJECTS BEING CONSIDERED IN ANOTHER**
187 **DOCKET, WOULD THIS CAUSE RMP TO FILE BACK-TO-BACK RATE**
188 **CASE FILINGS?**

189 A. No, not necessarily. As previously indicated, the Company has the ability
190 to submit a rate case filing to request an increase in rates if it forecasts
191 that it will not earn its authorized rate of return. Whether or not the wind
192 repowering projects at issue in Docket No. 17-035-39 and the new wind
193 and new transmission projects at issue in this docket will result in the
194 Company not earning its authorized rate of return, as well as the timing in
195 which the projects may cause the Company to begin to earn below its
196 authorized rate of return, will be dependent on all components of the
197 revenue requirement equation. If the RTM is rejected and the Company
198 forecasts that it will be able to earn its authorized rate of return in the
199 period during and subsequent to the wind repowering projects at issue in
200 Docket No. 17-035-39 being placed into service, then it presumably would
201 not file a rate case. As pointed out in Surrebuttal Testimony I submitted
202 on November 15, 2017 in Docket No. 17-035-39, RMP projects that the
203 benefit associated with the Production Tax Credits (“PTC”) generated from
204 the wind repowering projects will exceed the revenue requirements driven
205 by those same projects during the first calendar year the repowering
206 projects are placed into service (i.e., 2019) and in three of the first four

REDACTED

207 calendar years the repowered assets are in service.⁴ Subsequently, if
208 RMP then projects that the new wind and new transmission projects will
209 result in the inability to earn its authorized rate of return, RMP would have
210 the opportunity to file a rate case utilizing a future test year in which the
211 new assets are in service.

212 If the Company does submit a rate case filing that utilizes a test
213 year covering the period in which the wind repowering projects are initially
214 placed into service but the projects at issue in this case will not yet be in
215 service in that test year, RMP would have the opportunity to subsequently
216 file an application for alternative cost recovery for major plant additions
217 associated with the new wind and new transmission projects.

218 **Q. PLEASE ELABORATE ON THE ABILITY TO FILE FOR ALTERNATIVE**
219 **COST RECOVERY.**

220 A. Utah Statute Section 54-7-13.4 addresses alternative cost recovery for
221 major plant additions. Section 54-7-13.4(2) states: "A gas corporation or
222 an electrical corporation may file with the commission a complete filing for
223 cost recovery of a major plant addition if the commission has, in
224 accordance with Section 54-7-12, entered a final order in a general rate
225 case proceeding of the gas corporation or electrical corporation within 18
226 months of the projected in-service date of a major plant addition." Section
227 54-7-13.4(c) defines major plant additions as a single capital investment

⁴ Docket No. 17-035-39, Surrebuttal Testimony of Donna Ramas, lines 70 – 88.

REDACTED

228 project that exceeds 1% of the rate base determined in the most recent
229 general rate case. The procedures provided for in the statute are more
230 streamlined than a full rate case and are processed over a shorter time-
231 frame.

232 The opportunity under the statutes to request alternative cost
233 recovery for major plant additions would alleviate the potential need for
234 back-to-back rate case proceedings should the Company's internal
235 forecasts determine that both the wind repowering projects AND the
236 projects being considered in Docket No. 17-035-40 would cause it to not
237 earn its authorized return.

238 **Q. YOU INDICATED THAT THE LAST UTAH BASE RATE CASE UTILIZED**
239 **A HISTORIC BASE YEAR ENDED JUNE 2013 AND A FUTURE TEST**
240 **YEAR ENDING JUNE 2015. HAS THE COMPANY DISCLOSED WHEN**
241 **IT ANTICIPATES IT WILL FILE ITS NEXT RATE CASE IN UTAH?**

242 A. No, not to the best of my knowledge.

243 **Q. IS RMP'S PROPOSED ESTABLISHMENT OF A NEW RESOURCE**
244 **TRACKING MECHANISM NEEDED?**

245 A. No, it is not. As addressed above, if the projects at issue in this
246 proceeding are found to be prudent and in the public interest, existing
247 Utah Statutes provide the means to address the revenue requirement
248 impacts of the projects. There is no need to institute a complex recovery
249 mechanism to address the costs and benefits associated with the projects.
250 Overall, the traditional ratemaking approach has resulted in fair and

REDACTED

251 reasonable rates being charged to customers for the services they receive
252 from the Company. It is my opinion that the Company's testimony
253 regarding the RTM is not persuasive enough to justify modifying the long
254 standing approach by implementing an additional recovery mechanism
255 outside of base rate recovery.

256 Additionally, as indicated previously in this testimony, it is my
257 opinion that too much time would have elapsed from the last base rate
258 case to the date the projects at issue in this docket will be placed into
259 service to assume that current base rates combined with the Company's
260 proposed RTM will result in fair and reasonable rates being charged to
261 Utah ratepayers.

262 **Q. AS PART OF THE COMPANY'S REQUEST, WHAT IS IT ASKING WITH**
263 **REGARDS TO THE PRODUCTION TAX CREDITS ASSOCIATED WITH**
264 **THE NEW WIND PROJECTS?**

265 A. The Company is requesting that the RTM be used to track the year-to-
266 year changes in the PTCs so that the full impacts of the PTCs are
267 captured through the date of expiration of the PTCs.

268 **Q. DO YOU AGREE THAT THE RTM SHOULD BE ESTABLISHED TO**
269 **ADDRESS THE TREATMENT OF THE PRODUCTION TAX CREDITS**
270 **THROUGH THEIR EXPIRATION DATE?**

271 A. No, I do not. My recommendation is that the proposed RTM be rejected.
272 If the Company goes forward with the new wind projects at issue in this
273 docket, the appropriate treatment of the PTCs resulting from the projects

REDACTED

274 can be addressed in a future rate case proceeding. At that time, the
275 Company would have the opportunity to request that the PTCs be added
276 to the Energy Balancing Account (EBA) or to request the establishment of
277 a regulatory asset account to track the differences between the PTC
278 incorporated in base rates and the actual PTCs received by the Company.
279 Parties to the rate case would then have the ability to address whether or
280 not the requested EBA revisions or the requested regulatory asset should
281 be established and the Commission can make a decision regarding the
282 requested treatment as part of its order in the rate case.

283 If either EBA treatment or regulatory asset accounting for the PTCs
284 is not established by the Commission as part of a rate case order, the
285 Company would still have the ability to file a rate case at a future date if
286 the expiration of the PTCs would cause it to not be able to earn its
287 authorized rate of return. Under current tax law, the PTCs would expire
288 ten years after the projects begin to generate the energy to which the
289 PTCs apply. Many changes in the Company's operations will occur over
290 that time frame and there is no way to know this far out if the distant future
291 expiration of the PTCs under current tax law will cause the Company to be
292 unable to earn its authorized rate of return on its investments.

293 **Q. DO YOU HAVE ANY ADDITIONAL OVERARCHING CONCERNS**
294 **REGARDING THE PROPOSED ESTABLISHMENT OF AN RTM?**

295 A. Yes. Shifting costs from base rates to automatic recovery mechanisms
296 removes some of the incentive to control costs. If costs are automatically

REDACTED

297 trued-up to actual, there may not be as much focus on controlling the
298 costs between base rate proceedings.

299 **Q. IF THE COMMISSION DOES APPROVE AN RTM IN THIS CASE, WILL**
300 **ADDRESSING THE APPROPRIATE BALANCES TO FLOW THROUGH**
301 **THE MECHANISM EACH YEAR BE A SIMPLE TASK?**

302 A. No. There are many components to the proposed RTM described and
303 illustrated in Mr. Larsen's direct testimony and exhibits. Essentially, all
304 aspects of the new wind and new transmission projects on the revenue
305 requirements will need to be evaluated and considered on an annual basis
306 in determining the RTM surcharges to customers. This would include, but
307 not necessarily be limited to, the impacts of the various projects at issue in
308 this proceeding on plant in service, accumulated depreciation,
309 accumulated deferred income taxes, O&M expense, depreciation
310 expense, property tax expense, wind tax expense, and production tax
311 credits. The cost allocation factors and RMP's application of the factors in
312 determining the various impacts on a Utah jurisdictional basis would also
313 need to be reviewed in the annual RTM reviews. Establishing a new
314 recovery mechanism outside of base rates adds significant complexity to
315 the regulatory process as well as the amount of necessary oversight
316 between rate case proceedings. In addition to the need for an annual
317 review of the Energy Balancing Account, an annual review of the RTM
318 would be added. Instead of making the regulatory process less complex,
319 it would greatly increase the complexity. As indicated in this testimony,

REDACTED

320 establishment of an RTM along with the added regulatory oversight and
321 complexity it would bring, is not needed.

322

323 **TAX RATE UNCERTAINTY**

324 **Q. IS THE COMPANY'S ANALYSIS PRESENTED IN THIS CASE BASED**
325 **ON FEDERAL INCOME TAX RATES CURRENTLY IN EFFECT AND ON**
326 **CURRENT TAX LAW AS IT PERTAINS TO PRODUCTION TAX**
327 **CREDITS?**

328 A. Yes. The Company's assumptions and calculations in this case are based
329 on the 35 percent federal corporate income tax rate currently in effect as
330 well as the production tax credit provisions existing in current tax law.

331 **Q. IS IT POSSIBLE THAT THE FEDERAL INCOME TAX RATES COULD**
332 **CHANGE IN THE NOT TOO DISTANT FUTURE?**

333 A. Yes. There is a distinct possibility that the federal corporate income tax
334 rate could decline to 20 percent between the present date and when the
335 projects at issue in this docket are placed into service. The "Unified
336 Framework for Fixing Our Broken Tax Code" developed by the Trump
337 Administration, the House Committee on Ways and Means, and the
338 Senate Committee on Finance issued on September 27, 2017 would
339 reduce the corporate federal income tax rate to 20 percent. Subsequently,
340 on November 16, 2017, the U.S. House of Representatives ("House")
341 passed the Tax Cuts and Jobs Act. The Tax Cuts and Jobs Act passed by

REDACTED

342 the House provides for a corporate federal income tax rate of 20 percent.

343 As of the date this testimony was prepared, the current U.S. Senate

344 Committee on Finance version of the Tax Cuts and Jobs Act also provides

345 for a corporate federal income tax rate of 20 percent. While it is not yet

346 certain that a corporate federal income tax rate of 20 percent will

347 ultimately be signed into law, it is a distinct possibility.

348 **Q. WOULD LOWER CORPORATE INCOME TAX RATES HAVE A**
349 **SUBSTANTIAL IMPACT ON THE ANALYSIS PRESENTED BY THE**
350 **COMPANY IN THIS DOCKET?**

351 A. Yes. Company witness Jeffrey K. Larsen presented the estimated
352 revenue requirement costs and benefits resulting from the combined
353 projects at issue in this docket for calendar years 2020 through 2023 in his
354 Exhibit RMP__(JKL-2). OCS Data Request 3.1(b) asked the Company to
355 provide the impact on Mr. Larsen's figures presenting the results of the
356 combined projects on revenue requirements if the corporate federal
357 income tax rate was reduced to 20 percent. The table below shows a
358 comparison of the Company's estimated annual revenue requirements
359 associated with the projects⁵ on a Utah jurisdictional basis for 2020

⁵ The revenue requirements are also referred to as "Net Customer Impact" by the Company on Exhibit RMP__(JKL-2). It includes all revenue requirement impacts projected by the Company associated with the combined projects, such as the after-tax return on rate base, expenses, offsetting wheeling revenues, reduction to net power costs and PTC offsets.

REDACTED

360 through 2023 based on federal income tax rates of 35 percent and 20
 361 percent.
 362

Table 1 - Estimated Revenue Requirement Impact - Combined Projects
 (000s of dollars on a Utah Jurisdictional Basis)

	2020	2021	2022	2023
At 35% Federal Income Tax Rate	(6,764)	37,115	38,037	29,728
At 20% Federal Income Tax Rate	(5,487)	39,089	43,126	37,268
Impact of Tax Rate Change	1,277	1,974	5,089	7,540

363

364 As shown in the above table, the Company's estimated net impact on
 365 customers for the revenue requirements associated with the combined
 366 projects at issue in this docket are considerably higher at a federal income
 367 tax rate of 20 percent as compared to a rate of 35 percent. The above
 368 table is based on the revenue requirement impact analysis presented by
 369 Company witness Jeffrey K. Larsen. In his direct testimony, Office
 370 witness Phil Hayet addresses the impacts of a reduction to the federal
 371 income tax rate on the economic analysis presented in Company witness
 372 Rick T. Link's testimony.

373 **Q. WHY DOES THE LOWERING OF THE CORPORATE TAX RATE**
 374 **CHANGE THE ECONOMICS OF THE COMBINED PROJECTS?**

375 A. The production tax credits received by the Company are grossed up for
 376 income taxes in order to determine the impact on revenue requirements.
 377 While lowering the income tax rates would reduce the pre-tax return on
 378 the investments included in the revenue requirements, it also significantly
 379 lowers the revenue requirement value of the production tax credits.

REDACTED

380 **Q. HAS THE COMPANY PROVIDED THE POTENTIAL IMPACTS OF**
381 **LOWER CORPORATE INCOME TAX RATES ON THE ECONOMIC**
382 **ANALYSIS PRESENTED IN THE DIRECT TESTIMONY OF RICK T.**
383 **LINK?**

384 A. No. The Company was asked in the OCS's Seventh Set of Data
385 Requests to provide the impacts on various tables presented in Mr. Link's
386 testimony if the federal income tax rate is reduced from 35% to 15%, 20%
387 and 25%. The Company responded that "PacifiCorp has not performed
388 the requested analysis."⁶

389 **Q. ARE THERE ANY ADDITIONAL PROVISIONS IN THE TAX CUTS AND**
390 **JOBS ACT PASSED BY THE US HOUSE ON NOVEMBER 16, 2017**
391 **THAT COULD HAVE A SIGNIFICANT IMPACT ON THE ECONOMIC**
392 **ANALYSES DISCUSSED IN MR. LINK'S REBUTTAL TESTIMONIES?**

393 A. Yes. Company witness Chad A. Teply explains on lines 109 to 113 of his
394 direct testimony that "The time-sensitive nature of the Combined Projects
395 is primarily driven by the pending phase-out of the federal PTC for new
396 wind resources" and that the Internal Revenue Code "...provides for a
397 PTC at the 2017 full rate of 2.4 cents per kilowatt hour of electrical energy
398 production by a wind facility." Under current tax law, the PTCs on a per
399 kilowatt hour basis are inflation-adjusted. The un-inflated rate is 1.5 cents
400 per kilowatt hour of electricity produced and sold and the current inflation

⁶ RMP's responses to OCS Data Requests 7.1, 7.2 and 7.3.

REDACTED

401 adjusted rate is 2.4 cents per kilowatt hour. In his economic analysis,
402 Company witness Rick T. Link assumes that the PTC benefits increase
403 with inflation until the PTC expiration.⁷ Mr. Link's economic analysis
404 assumes that the wind repower projects at issue in this docket will qualify
405 for the full 100 percent of the PTCs and that the value of the PTCs will be
406 based on the inflation-adjusted PTC rate.

407 The Tax Cuts and Jobs Act passed by the House includes Section
408 3501 – *Modifications to Credit for Electricity Produced from Certain*
409 *Renewable Resources*. The modifications remove the inflation adjustment
410 to the PTC rate for projects that begin after the date of the enactment of
411 the new rules and revises the rules for determining the beginning of
412 construction. The revised rules for the determination of the beginning of
413 construction would potentially negate the safe-harbor provisions relied
414 upon by the Company in determining that the projects would qualify for
415 100 percent of the PTC. The Section by Section Summary of the Tax
416 Cuts and Jobs Act issued by the House indicates that it is projected that
417 the revisions in Section 3501 will increase federal revenues by \$12.3
418 billion over 2018 – 2027. Thus, the changes are projected to have a
419 substantial impact on the amount of PTCs received as compared to
420 current tax law.

⁷ Direct Testimony of Rick T. Link, lines 868 – 873.

REDACTED

421 **Q. IS IT CERTAIN THAT THE MODIFICATIONS TO THE PTCs**
422 **CONTAINED IN THE TAX CUTS AND JOBS ACT PASSED BY THE**
423 **U.S. HOUSE OF REPRESENTATIVES WILL BE SIGNED INTO LAW?**

424 A. No. The U.S. Senate Committee on Finance version of the Tax Cuts and
425 Jobs Act did not include the changes to the PTC provisions that are
426 reflected in the House version of the Act as of the date this testimony was
427 prepared. It is not yet known with certainty if the revisions to the PTCs
428 contained in the Tax Cuts and Jobs Act passed by the House on
429 November 16, 2017 will become law. It is also not yet known if the Senate
430 will pass a version of the Tax Cuts and Jobs Act that will revise the current
431 PTC provisions. It is also not yet known if the changes to the PTC
432 provisions passed by the House will be removed or modified in the
433 reconciliation process between the House and Senate versions of the Tax
434 Cuts and Jobs Act (assuming the Senate passes a version of the Tax Cuts
435 and Jobs Act). While the outcome is uncertain, these are real risks
436 associated with potential changes in tax law that would greatly impact the
437 economic analysis of the projects at issue in this case.

438 **Q. ARE THERE ADDITIONAL CHANGES IN THE TAX CUT AND JOBS**
439 **ACT PASSED BY THE HOUSE AND BEING CONTEMPLATED BY THE**
440 **SENATE THAT WOULD IMPACT THE ECONOMIC ANALYSIS**
441 **PRESENTED IN THE COMPANY'S APPLICATION?**

442 A. Yes. Current tax law allows for accelerated depreciation, or "bonus
443 depreciation" for certain qualified property. The bonus depreciation

REDACTED

444 allowed under current tax law for qualified property is 50% for qualified
445 property placed in service during 2017, phasing down to 40% in 2018 and
446 30% in 2019. There is an exception in the current tax law that would allow
447 costs incurred before January 1, 2020 for certain property having longer
448 production periods, with a tax recovery period of at least ten years and
449 cost in excess of \$1 million, to remain eligible for the 30% bonus
450 depreciation rate if the property is placed into service before January 1,
451 2021. Thus, under current tax law, at least a portion of the costs
452 associated with the projects at issue in this proceeding would qualify for
453 the 30% bonus depreciation provisions. While the Tax Cut and Jobs Act
454 passed by the House as well as the current version of the Act being
455 contemplated by the Senate (as of the date this testimony was prepared)
456 provides for immediate expensing of 100% of the cost of qualified property
457 placed in service between certain dates, property used by a regulated
458 public utility company would no longer qualify for the special bonus
459 depreciation or new 100% expensing provisions. Thus, the projects at
460 issue in this case may not qualify for bonus depreciation. If the projects
461 do not qualify for bonus depreciation, the accumulated deferred income
462 tax offset to rate base will be lower during the initial years the projects are
463 in service, increasing the associated revenue requirements and negatively
464 impacting the economic analysis.

REDACTED

465 **Q. ARE YOU AWARE OF ANY RISKS REGARDING THE ABILITY OF THE**
466 **PROJECTS TO QUALIFY FOR BONUS DEPRECIATION UNDER**
467 **CURRENT TAX LAW?**

468 A. Yes. As indicated above, under current tax law a portion of the costs
469 associated with the projects at issue in this docket would qualify for the
470 30% bonus depreciation provisions if the projects are placed in service by
471 January 1, 2021. If the Company is unable to meet the required January
472 1, 2021 in service date, the benefits associated with the bonus
473 depreciation provisions would no longer apply.

474 **Q. DO YOU KNOW THAT THE CORPORATE INCOME TAX RATES WILL**
475 **BE REDUCED?**

476 A. No. However, there is real potential that the federal corporate income tax
477 rates will change and this real potential should not be ignored. The
478 possibility of tax reform in the near term raises a significant risk with
479 regards to the economic viability of the projects at issue in this case, and
480 that risk would shift to ratepayers under the Company's proposal.

481 **IMPACTS OF RENEWABLE ENERGY CREDITS**

482 **Q. IN HIS DIRECT TESTIMONY, AT LINES 83 TO 85, MR. LINK**
483 **INDICATES THAT THE PROJECTED BENEFITS OF THE COMBINED**
484 **PROJECTS HE PRESENTS DO NOT INCLUDE ANY VALUE**
485 **ASSOCIATED WITH RECs THAT WILL BE GENERATED BY THE NEW**

REDACTED

486 **WIND FACILITIES. DO YOU AGREE THAT THE POTENTIAL VALUE**
487 **OF RECs SHOULD BE EXCLUDED FROM THE ANALYSIS?**

488 A. Yes. In fact, I recommend that the Commission not give credence to the
489 possibility of future revenues from the Renewable Energy Credits (RECs)
490 that will be generated by the repowered wind projects in its evaluation in
491 this case.

492 **Q. WHY NOT?**

493 A. The amount of potential future revenues that RMP will receive from the
494 new RECs, if any, is unknown. The Company indicated in its response to
495 OCS Data Request 6.9 that the REC market "...is not consistently active
496 and is illiquid" and that there is "...little price transparency in REC
497 markets." The Company also stated in the response that the volume of
498 RECs available in the market as well as the location of the resources
499 generating the RECs impacts the REC prices. The amount of additional
500 wind resources anticipated to come on line between the present time and
501 the expiration of the PTCs will obviously put downward pressure on the
502 ability to sell generated RECs as well as the prices paid for RECs.
