Dear UT PSC,

Solar power with backup batteries and wind with natural gas as a last alternative should be the current objectives.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Thomas Nadsady

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Corey Young

To: psc@utah.gov

Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Darin Ross

Dear UT PSC,

You could lead the way in clean, renewable power. Don't you think these old industries have gotten rich enough from fossil fuels without taking responsibility for the pollution they produce? It's time to change the game. There are people just bursting to move to solar power production and to hold the polluters responsible with carbon taxes.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Jon Rock

Dear UT PSC,

As a Boy Scout, I was taught to leave a campsite better than I had found it. We are not doing that in Utah. Compared to 70 years ago, Utah's Air is not filled with coal dust. But make no mistake, we are eliminating wildlife and maintaining terrible levels of pollutants in the air. The greatest gift we can leave the next generation is the earth. Please invest heavily and now in clean energy.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

<automail@knowwho.com>

To: psc@utah.gov

Dear UT PSC,

I am vary concerned that Rocky Mountain Power continues to obfuscate the true cost of their old, woefully wasteful and highly polluting coal fired generating plants. It is unconscionable to me that Rocky Mountain Power keeps getting away with grossly polluting coal burning power plants when Utah has such abundant renewable power potential, if only Rocky Mountain Power invested our rate payments in clean solar, wind and geothermal generating sources rather than being allowed to continue to foul our air and waste our water in antiquated, and uneconomic coal burning power generation.

Please require Rocky Mountain Power, our monopoly electricity utility, to open their books to The Commission for full audit and emphasize renewable power generation and stop forcing Utah rate payers to subsidize Rocky Mountain Power's antiquated coal plants and wind farms in Wyoming at the expense of developing Utah renewable power sources.

It is not fair for me, and fellow Utah rate payers to be forced to breath polluted air from burning coal to generate power when we have such abundant renewable resources. We should not have to keep subsidizing wasteful old technology at the expense of public health. This is more than just a money issue, it is a public health issue, which should be made part of The Commissions consideration to keep pace with advancing technological benefits that should be part and parcel in future Commission evaluations of Rocky Mountain Power's monopoly.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Marv Poulson

Dear UT PSC,

To the above I would like to add that all my Rooftop Solar Residential Clients plan to add an energy storage battery to their system so that they can function Grid Tied but OFF GRID and only pay RMP the no service fee which varies from \$9 to \$11. When most of RMP UTAH customers do same, maybe RMP will hear us.

Dear UT PSC,

Please don't squander our valuable resources.

Let's not miss this opportunity to grow into solar and show the rest of the country what is possible when great minds think alike and take action to keep our air clean. If we "exhaust" our other resources, our air may be too polluted for solar to work and we will all be living indoors continually. Let's do what is right for all our citizens to have a healthy future. No more asthma, no more COPD, lung cancer, allergies because our immune systems cannot compete with the toxins ...Please vote no...

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Gail Kelly

Dear UT PSC,

As a resident of Emery County, I believe that a green energy approach could bring high paying jobs to our area as well as clean the land, air, and water contaminated by years of burning coal. Solar farms could be built in the fields, now used to rid the Huntington Power Plant of its waste water. Moreover, a wind farm could stretch across the western foot hills from northern Carbon County as far south as Clawson. Transmission lines, roads, and other infrastructure are already in place, and, since the state of Utah owns the land anyway, should have little trouble in securing permits to proceed with a green energy plan. Emery and Carbon counties would benefit both economically and environmentally while Rocky Mountain could "green" its energy portfolio. To do any less is unconscionable.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Allen Livingston

Dear UT PSC,

In their latest plan, Rocky Mountain Power proposes a woefully inadequate 20% clean energy benchmark for the next 20 years.

Utah is being left in the dust as other states surge ahead in the clean energy revolution. Rocky Mountain Power's plan completely fails to invest in clean energy within the State of Utah, keeping good-paying jobs out of grasp for Utah families, while simultaneously putting Utah rate-payers on the hook for a \$3 billion investment in Wyoming.

Utah must seize the opportunity to lead on clean energy innovation. Send your comment to the Public Service Commission to deny Rocky Mountain Power's latest resource plan!

Nearly half of Rocky Mountain Power's coal plants are "uneconomic", running at an economic loss and costing ratepayers money unnecessarily. These plants are outdated and expensive to run -- coal can't compete in the free market with affordable wind and solar. Rocky Mountain Power has not provided a full economic accounting of their coal fleet for many years, shrouding their decision making process with a serious lack of transparency.

Utah decision-makers need to hear from you! Demand that Rocky Mountain Power unveil the true economics of their failing coal plants, and make room for clean energy development!

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Katy Marsh

Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Mary Schneider

Dear UT PSC,

It is obvious where the energy markets are heading as the price of renewables drops. A smart company would get ahead of the curve.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Bettina Conrad

Dear UT PSC,

Having relatives living in other states I am really appalled at how anti-environment our state is and how far behind the times we are. Already I have relatives who are leaving Utah, in particular those who live in the northern half, for states with clean air and environmental awareness and respect. And my relatives came here as original settlers in 1848, my aunt, Lucy Decker, was married to Brigham Young!

I see Utah being dismissed as a 12th century loser of a state on the internet all the time - even people in the deep south know we have horrible air and that our leaders couldn't care less about our state and our lands. We have a reputation now for being anti-wildlife, anti-environment and anti-conservation and sadly, it's all true. Even sadder is it's not the residents of our state, it's our leaders, they care nothing for Utah, just for themselves and for corporate campaign donors. It's starting to be a liability to tell people you're from Utah; only Wyoming gets a lower score. We need to change this now, before everyone leaves this state except the people who are ruining our air and water quality and trashing and exploiting our lands for money. How will you run a state with just your campaign donors as residents? Keep this anti-environment attitude up and we'll all find out.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

To: psc@utah.gov

Dear UT PSC,

Utah needs to become more forward thinking on energy policy. Our kids' health and future are at stake. For example, the Utah legislature should not push excessive registration fees on electric vehicle owners. It's embarrassing that our state continues propping up fossil fuel industries by removing incentives for better, cleaner alternative fuel choices. Punish the polluters, not the consumers who choose clean energy. Clean air now!

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Andie Madsen

Dear UT PSC,

I cannot believe Utah is not using as much clean energy as it can. Why is Utah still in the dark ages using fossil fuels? Fossil fuels destroy land, air, and water. Time to move to the 21st century and embrace clean energy.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Dear UT PSC,

While I applaud some of Rocky Mountain's efforts to move towards more sustainable and clean power-I have used their wind blocks in the past and now use a solar block-they could do much better in phasing out coal and building or leading more solar. I think their current plan needs to be rejected and they need to be asked to do more to preserve our precious landscapes from mining as well as improve the quality of air we all breathe. A number of their plants contribute to the reduced visibility in and around ore national parks. I have spent much time in these spaces and have seen the amount of people who come from all over the world to enjoy them. We can't afford to jeopardize this economic engine nor the health of our residents. Please send this latest back to the drawing board.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Dear UT PSC,

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar. Utahns want more clean, renewable energy like cost effective energy efficiency, solar and wind here in Utah. Utah should be a leader in the western clean energy economy; we can benefit from the transition away from fossil fuels by creating family wage jobs in the clean energy and energy efficiency industries. Rocky Mountain Power is moving far too slowly to transition from fossil fuels and failing to invest in Utah's clean energy future.

These decisions carry huge consequences for Utah's climate and air quality and they affect all Utahns. I believe a careful look at the economics of the Wyoming coal plants would lead to a swifter transition to clean energy, creating an economic development opportunity for Utah.

Please oppose Rocky Mountain Power's proposals around wind and expensive transmission lines until they prove these investments are in the best interest of Utah utility customers. Please encourage the company to invest in Utah's growing clean energy economy.

Sincerely,

Mark Sandberg

Dear UT PSC,

I am a lifetime resident of Utah. I care greatly for the local environment and air quality in addition to the local economy. RMP is a monopoly and they aren't prioritizing progressive ways to reduce our addiction to non-renewable resources. Its frustrating to be stuck paying a company that isn't leading the country in renewable energy. We have great potential to invest in wind and solar. I personally have added solar panels to my roof, but many citizens can't afford to do so. I would hope you deny their latest resource plan.

Dear Commission Chair Thad LeVar, Commissioner David Clark, Commissioner Jordan A. White,

Please tell Rocky Mountain Power that their 875,000 customers in Utah want clean air, clean energy, and local economic development. According to Rocky Mountain Power's current plans, twenty years from now only twenty percent of their energy will come from renewable sources like wind and solar.
