PSC,

I highly disagree with Rocky Mountain Power's study proposal. As a researcher, I know the importance of proper data gathering and how that can effect the results of a study. Rocky Mountain Power in my opinion is a monopoly that wants to manipulate the study results to justify not paying a fair price for the energy generated by solar power producers. I have a solar system and should be compensated fairly for power I produce. I have already paid for the equipment and installation so why should I not reap the benefits for doing so. I thought we lived in a free market society. Monopolies are not conducive to a free market economy. Please deny this flawed study proposal and face them to take a valid look at this situation.

Thank you,

Kevin Rapp
