To whom it may concern:

The PSC should reject RMP's plan.

- The proposed changes to net-metering are not in the best interest of Utah families and businesses.
- Expansion of residential solar in Utah will end, thousands of Utah jobs will be lost, and Utah's unmatched, spectacular lands will suffer if the PSC approves RMP's plan.
- RMP's plan does not fit in the state's Covid-19 strategy for economic recovery and revitalization.
- RMP's plan decreases access, availability, and affordability of residential solar.
- RMP should not be allowed invest in large scale energy projects without first considering meeting its renewable portfolio standards by local investment and support in residential solar energy producers.
- Any request for a change to net-metering should proceed by a cost/benefit study performed by a neutral third-party to inform the PSC of the true costs and benefits of solar interconnection and to promote the growth of residential solar energy producers.

Thanks,
