Greetings,

We have been researching getting solar on our home. It is so disappointing to learn about the changes in net metering rates being proposed by Rocky Mountain Power. If allowed to go through this decision will kill many solar businesses in Utah, large and small. We need to move toward clean energy!

If a homeowner cares enough and is willing to pay for solar panels they should be encouraged in every way. This will provide cleaner air and move society in the direction we need to be moving. To allow Rocky Mountain Power to be rewarded by producing coal powered electricity to Utah is moving backwards. It's allowing the greed of one large entity the power to discourage many who know that burning coal must become a thing of the past.

Please do the right thing. Please support solar power in Utah by not allowing Rocky Mountain to call the shots regarding net metering.

Thank you for your time and consideration.

Best wishes,

Lori and Steve McDonald
