Dear Utah Public Service Commission,

As an ER nurse, I see many people arrive with exacerbation of pre-existing respiratory conditions, including children. As I am sure you all are aware, climate change is fueling dryer and windier conditions that are directly responsible for the devastating wildfires and wind storms sweeping the West currently, and giving the West Coast in particular the distinguishment of having the worst air quality in the world currently. If you allow Rocky Mountain Power to block affordable access to residential customers, it will also block any efforts at consumer demand for affordable solar energy, which we desperately need to fight climate change. Which is ruining the health of Utahns currently, and will only get worse. Please do not be the group of people who condemned future generations to horrible heat, fires, wind, and devastating air quality for their health. Please step up now and help out your neighbors and their children.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Meaghan Kennedy

Dear Utah Public Service Commission,

We have huge pollution problems in Salt Lake Valley. I would like to add solar panels to my house (and already have on a rental house) and we just don't have the capital right now. If Rocky Mountain Power continues to use their muscle to decrease our choices when they already have a monopoly then I will go off the grid. This kind of corporate cronyism is not what we need in Salt Lake with one company telling me what I will pay for energy rather than giving me options. We are a republican state and as a Republican I enjoy personal choice!!!! Please do not take individual choices away from us!!!

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

We installed solar panels a couple of years ago, and we now run an electric car off these panels, as well as all our appliances. To slow the growth of the solar industry in Utah is not only job-killing, but disastrous for the climate. It makes no sense not to continue to protect and invest in solar power in a high desert state, where sun is free, plentiful and constant.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Keeping solar power a financially responsible option for Utah home owners is good for the environment, the economy and Utahns. I plan to put solar on my property someday to reduce fossil based electrical needs and reduce my electrical bills. Reducing net metering rates would make this hard to do. Rocky Mountain Power stands to gain from changes but solar installers would lose hundreds of jobs.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

I installed solar because it is the power alternative we need to be moving toward. Do not allow the big power companies derail this for their own profit.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Margy Russotto

Dear Utah Public Service Commission,

We put solar panels on our home 8 years ago because we felt it was important for everyone to do whatever they can to slow climate change. That behavior should be encouraged, not discouraged. The more people that use solar the less money RMP needs to invest in infrastructure. We should be working together for cleaner energy.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. Dear Utah Public Service Commission,

Rooftop solar created tangible and quantifiable benefits to the grid at large and non-solar ratepayers and should be valued as such. Rocky Mountain Power has presented an incomplete, narrow, and misleading set of information to justify their low credit rate, while solar advocates have demonstrated that rooftop solar should be valued at a much higher rate. I encourage you to reinstate the Net Energy Metering Program. Thank you for your time and consideration.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. Dear Utah Public Service Commission,

I believe homeowners should have the right to choose clean, renewable energy for their property if they so choose. Pollution and air quality are very clearly getting worse year over year in the Wasatch front and to preserve the well being of the next generation, we should certainly not stifle the development of clean energy alternatives.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. Dear Utah Public Service Commission,

Utah's air is crappy, every small step we can take to decrease the combustion of fossil fuels is with the effort. Net metering is the enticement rooftop solar users deserve. RMP gets subsidies (handouts) from users everyday, from right of ways to tax breaks it is time for them to accept that one-for-one net metering is here to stay.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. John Roh (john@rohbots.com) Sent You a Personal Message <automail@knowwho.com> Thu, Sep 17, 2020 at 8:58 AM
To: psc@utah.gov

Dear Utah Public Service Commission,

This is wrong on so many levels- how is it not immediately dismissed as a very selfish and bad idea? We NEED Solar, and wind and alternative power, and we have the sun which can contribute back to the grid to offset a fractional part of the costs to our planet. if you take this away then many of us will never be able to pay back what we've already invested in [and am still paying for]

Please do not take net-metering away from those who have or will make the investments into our economy and planet, just like you get to choose, we want and should have the same rights.

I suppose you could just pay for everyone's Solar Panels and then use the offset to pay yourselves back that would be fair, right???

Please choose wisely for our sake's, yours and the generations coming up and those well beyond that.

Thank you-

John

The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Dear Utah Public Service Commission,

Solar is an important part of cleaning up our air and water. As an asthma sufferer, clean air is very important to me. Solar should be protected and causes no harm to the grid.

RMP is able to sell my excess solar to my neighbors. This saves them money on generation and transport costs, particularly for the hot summer weather when most people are using A/C systems.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Dear Utah Public Service Commission,

Solar energy is renewable and "free" for the taking. Letting one company determine whether someone can access it because they, Rocky Mountain Power, might take a loss in their income as they have a monopoly on how the "free" sun energy" can be delivered, so they are making it very difficult for an American citizen to be energy conscious and utilize economically sustainable resources, which is healthy for local and international environments, this does not seem to be a healthy way of providing resources, solar and wind and hydro, that are mother natures renewable energy gifts to us humans. If Rocky Mountain Power had competitors this probably wouldn't bbe a problem for us citizens.

As a resident of Utah, I am urging you to reject Rocky Mountain Power?s proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2?/kWh to 1.5?/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power?s monopolization of sun power, and cutting off Utahns' right to energy choice.

Dear Utah Public Service Commission,

Its critical that we all work to make small and big changes to how we live so as to lessen our impact on the globe. As a utility, for the public good, Rocky Mountain Power should be held to supporting and driving that good and make decisions that are intrinsically aligned to serving out greater good.

I trust you'll think through how to best serve our communities for long term sustainability in the policy decisions you make.

Steve

Dear Utah Public Service Commission,

My family recently purchased solar panels. Drastically reducing the export credit would unfairly take advantage of our investment.

This action would also harm Utah and its citizens in the short-term and the long-term. In Utah, solar is key to reducing air pollution and mitigating climate change. Solar is also key to providing new, quality green jobs, supporting the Utah residents I recently contracted with to install my family's solar panels. Solar is an investment in Utah's future.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

As we watch our neighbor Western states deal with a terrible wildfire season Utah needs to become more supportive of alternative energy sources through robust programs and offer financial support to those owners that are using wind/solar generators. I also believe there has to be a way to encourage energy sources through state programs to work hand in hand with solar/wind users.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Ladies and Gentlemen. I am a proud owner of rooftop solar, which meets all our electrical needs, including powering our electric car. We have helped reduce carbon emissions and cleared the air in Utah.

RMP is now trying to crush the rooftop solar industry in Utah with an unfair, monopolistic pricing plan. I would STRONGLY urge you to reject the greatly reduced pricing scheme proposed by RMP. You only can stand up to this mega-corporation and protect Utah jobs and the rights of home owners to deploy rooftop solar. It is the right balance and the tight thing to do. Thanks for listening

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Monica Simons

Dear Utah Public Service Commission,

let the public choose what way we want to get our energy needs

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Dear Utah Public Service Commission,

As a physician who also spent six years working towards a PhD in environmental health, I think that it is critical that we encourage the adoption of solar energy, not discourage it. We have had solar panels for 5 years and as a result we purchased 2 electric vehicles which my wife and I drive, with nearly all of of electricity needs supplied by our roof.

The air quality in Salt Lake City needs many more people like us to do the same thing. That won't happen with Rocky Mountain Power's proposal. We need to breath clean air! We need to encourage green job growth as well.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Especially given the awful air quality in the salt Lake Valley (where I grew up, and finally fled in favor of better air to breathe)--any measure --and solar energy gathering is certainly the most promising technique-to improve the situation should encouraged by any means possible. Financial encouragement in the form of good sell-back rate from the solar user to the power company is probably the easiest and least complicated means I can think of. P)lease support Utah solar !

As a resident of Utah, I am urging you to reject Rocky Mountain Power?s proposal to reduce the export credit rate of rooftop solar by up to 85%. Dear Utah Public Service Commission,

One can not always count on coverage through a company such as Rocky Mountain Power. In fact, Where I live we have our own small power company. Having solar capability especially during a power outage is crucial. Power companies are also monopolies to a specific area. Citizens must have choices. Please save my option to use solar to save money AND for emergencies.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Deborah Unck

Dear Utah Public Service Commission,

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Dear Utah Public Service Commission,

I am a local small business owner who is hoping to eventually have saved enough money to do the right thing and install solar not only on my home but also on various properties I will inherit. All of this is subject to the long-term planning and affordability of Solar in Utah. It is vital that you take steps to save rooftop solar as it is one of the keys to combating destructive climate impacts, not to mention allowing our communities to be more resilient in the face of increasing natural disasters (like the recent wind-storm leaving many without power for over a week). During the recent 'dry hurricane' My parents were without power for 4 days; however they were able to tap into a single emergency outlet off of their solar array allowing them to save their perishable food and charge their phones to remain in communication. These kinds of things are going to be vital in the coming years. Please do not allow utilities to destroy this essential industry.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Dear Utah Public Service Commission,

Net metering is key to energy independence from foreign oil (electric cars), Middle East wars, nuclear waste / risk and dirty air. Ensure Utahns investment in rooftop solar pays itself back in a reasonable amount of time. Local installers and our solar industry will boom, rather than just benefit profits for out of state PacifiCorp and UAMPS out of state suppliers. Also, remember Fukushima, Chernobyl and three mile island that falsely promised safety and the need to transport radioactive waste to storage. Solar is the safe alternative. Do NOT kill solar just when it is becoming economically viable. Thank-you!

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Solar power is one of the crucial elements to changing our economic and physical approach to human power needs. It's obvious that they only contribute and do no harm to the environment so the only opposition is economic and those objects can only be attributed to corporate greed and what is clearly short sightedness on the part of any opposition. You must make sure the right to opt for solar is protected and encouraged and even incentivised. It will benefit your descendants as well as those living now.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

We live in a valley with extremely compromised air which will only become worse as the population grows. The use of non-coal power non-fossil fuel related energy sources is vital to preserve our way of life as well as prevent chronic diseases. The plan to illuminate or reduce net meter export tax or export credits shows an extremely shortsighted outlook which in the long term will compromise all of us. Please reconsider your plans and preserve our current system. I'm particularly concerned about the access to renewable energy sources from lower income citizens as well as hoping to preserve solar related jobs in the Salt Lake area.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Northern Utah has some of the worst air quality in the US, and we should be doing everything we can to reduce carbon-emitting pollution sources in Salt Lake and Cache valleys. I urge the PSC to block RMP's attempt to undercut pollution-reducing solar installations that only serve to line the pockets of wealthy board members. RMP wants to reduce export credits, but offers no explanation to how those cuts will benefit rate payers. This lays bare a scheme to goose corporate profits at the expense of air quality in Northern Utah. I urge the PSC to block RMP's plan and stand up for continuing the push for non-polluting energy sources in Northern Utah.

Greg Goodrum

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. Dear Utah Public Service Commission,

As someone who lives in the Salt Lake Valley, and who has to deal with our ever-worsening air quality, I think we really want to encourage homeowners to be involved in the shift to clean power. That's doubly the case, since it's obvious there's a big move to electric vehicles in the offing. The extra power generation is no doubt going to involve new power plants, but it would be a really good idea for some of that to get picked up by rooftop solar.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Catherine Tobey

Dear Utah Public Service Commission,

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Dear Utah Public Service Commission,

Folks this needs to stop. Rocky Mountain Power cannot be allowed to kill roof top solar by zeroing out net-metering and not paying for power pushed back into our electricity grid via solar panels. I want to be able to put solar panels on my roof and be able to send unused electricity back into the grid to reduce our use of dirty coal/ gas AND reduce the toxic pollution that smothers our cities.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Solar energy is such an obvious mainstay in clean energy the reasons are literally in the sky. It's called the sun without it we wouldn't exist. Angling out affordable and efficient solar panels with litigation should be criminal. Rocky Mountain power should be deeply ashamed. Solar energy is clean and efficient. It is obviously changing the face of Utah. Let the best future happen. Please fight for truth, and light. This is about progress. Our planet is finite, fossil fuels will not last forever, and the use of them is accelerating climate change at an alarming rate.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

My name is Roi Maufas, and I own a company called Gorilla Design. We specialize in affordable housing. We built the very first permitted shipping container based building in Salt Lake City. It is powered by solar panels tied to a swimming pool that is used as a geothermal heat sink. We recently signed the lease on a manufacturing facility that will provide affordable housing across the country, here in Salt Lake. This will create 75 living wage jobs and support 525 other jobs and keep growing to meet demand. As you know, the United States needs about 19-27 million affordable homes, so this is a rapidly growing essential market sector. All of this innovation is built on the foundation of solar powered buildings. If you allow RMP to extinguish this emerging market, I will be forced to take my business, my family, my team and my investors elsewhere. But that's the point, isn't it? To crush small businesses and eliminate any competition for RMP? How much are they paying you?

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. <automail@knowwho.com>

To: psc@utah.gov

Dear Utah Public Service Commission,

Plans to invest billions of dollars in coal plants facility upgrades over the next decade to meet environmental guidelines and prolong their life is a poor allocation of rate payer dollars.

Has this plan made any allowances for the newly enacted EPA regulations that requires substantially more investment than ever before to achieve required emission levels? Investing in coal is a risk. Because it is a 'dirty' fuel it will continue to be a target for ever increasing emission standards.

Investing in wind and solar makes economic sense. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels. Investments in these generation sources reduces the overall environmental load and aids in compliance with environmental requirements as fully as adding new stack emission controls to coal plants.

It's time to take advantage of renewable resources and distributed power generation contributions made by rooftop solar.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

James McCormick

Dear Utah Public Service Commission,

The PLANET IS DYING - Solar is necessary to save the planet. LOOK AROUND signs are not hard to see. Only willful ignorance can justify the position where rooftop solar is not an integral part of the future electric grid. Providing the most energy at peak usage times. Rooftop solar can be a WIN - WIN if you do not make it a WIN - LOSE. PROTECT THE FUTURE - SMART GRID OPERATIONS = ROOFTOP SOLAR.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

We have lived in Utah since the 60s and have watched our beautiful state become overcrowded and polluted. We have plans to put solar panels on our house in order to do our part to not pollute air with coal power, but the cost is daunting to a retired couple like us. Please help us and all environmentally minded citizens to be able to better afford solar power so we can stop the unhealthy air from being a daily hazard

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

My wife and I live in the Sugar House neighborhood. We are planning to retire in a couple of years and We have been thinking to put up solar panels because it is the right thing to do for the planet and also because our electric bills keep going up. I think the proposal that Rocky Mountain Power is unconscionable, It takes away the opportunity to pay off the cost of the installation of solar panels while RMP makes more money out of the excess that MY SOLAR PANELS are generating. In what society, in what world is this a fair exchange. My wife and I urge you to please listen to the little guys who are trying to do what's is right for our city, our state and our world. Please reach out to us if you have any questions. Our email us pioja61@msn.com

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. Dear Utah Public Service Commission,

Utah is the ideal state to embrace, lead and transition to solar power. My roof and, many of my neighbors roofs have ideal set up for solar power. I was planning to look more into installation this fall. Especially after it took up to 3 days for some residents to regain power after the latest wind storm. Alternate energy and storage seems logical in an area where high winds and earthquakes could interfere with current infrastructure. We need to encourage and promote more solar energy!

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

We are retired and have had our solar panels for four years. It will hurt us financially to have the current credit system altered. Given the current issues facing our air quality and growth issues, changing the system to create less incentive for solar is just irresponsible and actually crazy. Please, realize this will hurt our communities today and in the future.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Philip Tice

Dear Utah Public Service Commission,

I am frustrated that Rocky Mountain power may get the support from the Utah Public Service commission to severely reduce the credit rate with solar panel owners. Many would not have purchased panels if they knew they would get next to no credit, as they currently budget this credit to pay towards their panels. Also, why would the Commission support RMP to maintain their monopoly, which never benefits the public consumer. Last, but certainly not least: Why are we supporting RMP with creation of dirty energy? Solar is now cheaper to produce... Say NO to RMP!

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Susan Conner

Dear Utah Public Service Commission,

The effects of the recent windstorm, ever growing need to be able to be self sustaining in uncertain times and the opportunity to contribute to the effort towards net-zero power generation are all strong evidence of the value of home generated power. Hindering homeowners by reducing their paybacks is counter-productive and short sighted.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

Dear Utah Public Service Commission,

We need all forms of power to become truly energy independent. Rocky Mountain Power should be in the business of acquiring that power and helping to mitigate the effects of fossil fuels. By helping to make solar power more affordable for average homeowners through a fair by- back program, they would be a positive influence on that transition. I'm retired and can't afford to install solar on my home, but have felt better thinking that RMP gets some of its power from those who can. I hope that becomes even more prevalent in the future.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. To: psc@utah.gov

Dear Utah Public Service Commission,

I sold my home in West Valley that we had installed solar on after a huge financial investment. We never recouped that investment. Now we have a new home and would like to install solar, but the costs are so significant upfront that we wonder if it is worth it again given the lack of support in this state. Why does Utah Power not see the benefits of pivoting to solar? The long game says this is our future. Utah Power could be the leaders in that future. Instead your addiction to doing things in an outdated manner is destroying the planet. Solar could be a win for all of us!

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. Brian Walsh (brian.walsh5@gmail.com) Sent You a Personal Message

Thu, Sep 17, 2020 at 10:32 AM

<automail@knowwho.com>

To: psc@utah.gov

Dear Utah Public Service Commission,

I purchased a home in 2018 in Salt Lake City with the intention of upgrading our power to rooftop solar. In February of this year my wife and I had our first Child, putting a bit of a pause on large investments like rooftop solar. Unfortunately, with much-needed credits changing so drastically, my wife and I will likely not be able to afford rooftop solar for our home. Instead, we will continue to source our power from the state's monopolized utility, and they in-turn will continue to burn dirty coal. Even though renewable energy is competitively challenging fossil fuels in terms of price, unfortunately our state legislature is made up of climate deniers who are not willing to push back. The path forward is clearer than it's even been before; energy from the sun, captured locally on your roof through solar panels, used to provide all of your electrical needs is the only way forward in a state that has over 280 days of sunshine and some of the worst air quality in the nation.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Here's the deal folks. The future for all of us absolutely depends on rewiring - decarbonizing America and electrifying everything, AND making that lower cost while we are doing it. It is a sin that rooftop solar costs us already more than 10 times what Australians pay per kilowatt hour. AND the Australians are paying twice as much as the technology shows they should. It is time to save the planet, not bolster corporate profits.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. Dear Utah Public Service Commission,

As a country we need to make switching to solar and other renewable energy sources affordable. Do not allow RMP to dictate policy about roof top solar power.

They have a monopoly on electricity. Do not give them a monopoly on the use of the sun's radiation too.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Nancy Martin

Dear Utah Public Service Commission,

We are charged for power we use. We, and new users of roof-top solar power, should continue to receive a credit for power we return to the grid. That is just basic common sense and fairness. We do not seek "something for nothing," but Rocky Mountain Power seems to think that they should.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

We need to encourage decentralized power production in Utah. Particularly with the history of outages every year caused by poor infrastructure and weather. The exportcredit for net metering with rooftop Solar is an essential component of moving us towards this goal. It should be set at the maximum possible level to encourage citizens to invest in their own solution. Ultimately, Rocky Mountain Power should be a base load provider and maintainer of the distribution network NOT a monopoly provider of an essential service.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Dear Utah Public Service Commission,

Hello,

Thank you for taking my comment. Making solar inviting and accessible to homeowners is very important to me as someone who lives in Salt Lake where air quality is regularly unhealthy for outdoor activities. I moved to Utah because of its outdoor access and it is incredibly frustrating to watch the environment get destroyed by poor decision making on public policy. Please make a good decision for our future and our health by rejecting this proposal.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Living with the awful inversions every winter is a health crisis, and everyone needs to do what they personally can to reduce their use of fossil fuels to help protect our air quality. Having solar powered energy is one of the easiest ways to reduce fossil fuel usage, and with the incredible amount of sunshine we receive yearly in Utah, people should be encouraged to add solar--not the opposite. It's time to put the desire for increasing profits aside and do the RIGHT thing and embrace solar as the clean, renewable energy solution that we need in Utah.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

W Robinson

Dear Utah Public Service Commission,

If it had not been for the export credit, we would not have installed solar. We must encourage solar, not penalize those whose vision is for a cleaner energy for all of us.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. Dear Utah Public Service Commission,

We need to do all we can to reduce CO2 in our atmosphere to combat climate change. As I watch my friends and relatives in CA lose their communities to wildfires exacerbated by climate change, I realize that this could also happen in UT. Making it affordable for people to install solar is the right thing to do for Utah and our planet.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. Dear Utah Public Service Commission,

It's important to me that Solar companies have the same opportunities for growth as RMP, if not more opportunity. We need to be transitioning away from coal power, especially considering the problems the Wasatch Front has with pollution. Moving toward renewable, affordable energy like Solar is a win all around, and will help families become more self-sufficient as they pay less toward their energy bills. We shouldn't let RMP keep us in the past. The technology of the world is changing rapidly, and we have to change rapidly as a state to keep up.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. Dear Utah Public Service Commission,

Rooftop Solar is the BEST way to save the planet. Please do not discourage this from being the OPTIMAL method of energy production in the days and decades to come. Corporate solar farms are useful to AUGMENT what cannot be produced by rooftop. As 'farm to fork' is the most energy efficient way to provide food, so, also, is 'sun to roof to human' the most efficient way to electrify our homes.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

T Yeates

Rocky Mountain Solar Plan

1 message

rdwilde@xmission.com <rdwilde@xmission.com>

Thu, Sep 17, 2020 at 12:02 PM

To: psc@utah.gov

Commissioners,

The home solar proposal submitted by Rocky Mountain Power is a backward step for preparing our State for the future. As you are aware, Rocky Mountain is dragging its corporate feet in transitioning to the future by very slowly reducing its electrical output based on carbon fuels - coal and natural gas. Their reluctance in adapting wind, solar, and thermo sources is a slow roll to degradation of the air we breathe as well as a more rapid advance to heating our atmosphere.

Now, they want to drastically lower the net rates for home solar from 92% to somewhere in the 25% range and would go lower if you allow it. Allowing this huge rate reduction would not only be a kick in the pants to home owners who have spent hundreds of millions of dollars on solar but to all the residents of Utah who are help by the reduction of CO2. My estimate is that Utah residents have spend more on solar installations than Rocky Mountain. Rather than reduce the rate to home owners, the rate should be increased to 100% and only reduced back to its current level when Rocky Mountain matches the aggregate amount of solar expenditures that our Utah citizens have spent.

I personally feel that Rocky Mountain's game plan is to wait until they can get more favorable capitalization treatment from the PSC before spending, knowing how the PSC has treated capitalization expenditures for increasing rates in the past.

Please do not reduce the current rate structure. If anything increase returns to solar homeowners and use that as a carrot to lead this stagnant mined corporation into the future. Thank you for your consideration.

Dear Utah Public Service Commission,

As Utah residents with a rooftop solar array already installed, we respectfully request that you take into consideration the following comments during the Public Hearing scheduled for 5 October 2020. In our view your goal should be to ensure that homes and businesses with rooftop solar are fairly compensated for the clean energy they send to the grid. As you are well aware, prior to November 2017 Utah residents with rooftop solar used "net metering" to offset their Rocky Mountain Power (RMP) electric bills. This net metering program provided a fair credit for the excess energy solar owners send back to the grid, allowing those customers to use the credit when their system is not producing (e.g. at night). The Transition Program of late 2017 that replaced the net metering program for new customers did not provide a full retail rate credit on their electric bill, but rather an "export credit rate" of 9.2 cents per kWh for the energy they send back to the grid. Now Rocky Mountain Power (RMP) wants to further reduce compensation for new solar customers by another 84% to a very unfair 1.56 cents per kWh.

We strongly oppose this proposal for the following reasons:

1) The Rocky Mountain Power 1.56 cent per kilowatt-hour proposal is based on a flawed and limited solar study that looked at generation data from only 70 homes and businesses and credited only two benefits of solar power in their calculus: the value for avoided fuel purchases due to rooftop solar and for the line losses that are avoided when rooftop solar energy is produced close to where it is used (rather than transferred long distances across the grid). In contrast, Vote Solar conducted a much more comprehensive study, looking at a broader set of costs and benefits based on data from 1,214 solar customers, over 17 times greater than the RMP study. It is important to note that the Vote Solar study was also enhanced by the participation of over 3,300 Utah residents who willingly shared their energy usage and solar generation data. In this more comprehensive study, Vote Solar calculated the true value of solar to be 22.6 cents per kilowatt-hour – more than double the current rate of 9.2 cents. Therefore, one cannot logically support the RMP request to lower the current rate of 9.2 cents all the way down to 1.56 cent per kWh.

2) At a time when the Public Service Commission should be looking at ways to further build and enhance the growing solar industry in Utah, the RMP proposal would have a catastrophic effect on the solar industry in our state (currently employs over 7,000 people) and would negatively impact the larger state economy. If the Utah Public Service Commission were to accept RMPs proposed cuts for the year 2021, most of the solar companies doing business in our state will either go out of business or move to other states and the number of new solar customers will dwindle to almost zero. This is not the signal to send to the voters in our state when we are still choking on smoke and air pollution for many months each winter all along the Wasatch Front. The key decision at the public hearing on October 5th is how to enhance clean energy initiatives in our state and not kill our clean energy companies. In our view, reopening the net metering program that existed prior to Nov 2017 would be the best policy going forward.

3) Consider the rates established by some of our neighbor states in the West. In the state of Washington for example, the base rate for residential solar owners is currently 12 cents per kWh and the state also provides an additional bonus credit of 3 cents per kWh for solar customers that purchased solar panels made in Washington, thereby supporting local solar companies. This is a rate that is much closer to the true value rate of 22.6 cents per kWh as documented in the Vote Solar study and it encourages the development of clean energy companies in their state. Additionally, the payment rate does not change over the course of 8 years, but expires only when the owner receives back a maximum of 50% of their cost or 8 years whichever occurs first. In this way Washington state provides a stable process with locked in rates that enables smart planning by consumers. More importantly, it directly supports the growth of solar power in the state as a policy goal. We should do the same in Utah.

To sum up, the more comprehensive study conducted by Vote Solar reflects the true value of solar power and accurately documents the many benefits that solar power provides to RMP as well as to the community. We strongly oppose the RMP request to lower the current rate all the way down to one and a half cents per kWh. If the Utah Public

9/17/2020

State of Utah Mail - Request to provide public comment in Docket No. 17-035-61

Service Commission desires to continue the growth of clean energy in this state, it should hold the line at the current rate or return to the original policy of true net metering.

To: psc@utah.gov

Dear Utah Public Service Commission,

Encouraging rooftop solar is one of the most important ways we Utah citizens can turn around our air quality crisis and do our part to mitigate climate change, which is threatening our very livelihood, economy, health, and safety.

Rocky Mountain Power has an economic incentive to squash personal solar use, and our public health (and long-term economic wellbeing as a community less affected by poor air and climate-related weather crises) shouldn't be in a for-profit company's hands. The issue is much bigger than that, and it's one of statewide public concern. Thank you for serving as stewards charged with ensuring the greater public good above one company's profits. (They're going to be just fine, anyway--especially as they build more solar farms and transition away from coal plants, which I believe is already underway and inevitable.)

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Dear Commissioners,

As a Utah resident, I am writing to ask you to reject Rocky Mountain Power's proposed solar export credit rate (Docket No. 17-035-61).

This utility's proposed export credit rate reduction from 9.4¢/kWh to ~ 1.5¢/kWh is nothing more than an attempt by Rocky Mountain Power to misrepresent the value of rooftop solar in order to stifle competition and monopolize renewable power generation. The evidence provided throughout this solar export proceeding has both demonstrated the value of customer-generated exports and shown that Rocky Mountain Power has failed to adequately assess the value of excess solar energy in its proposed rate change.

A better solution than the proposed rate, which, if approved, would be among the most punitive in the nation, is an increased solar export credit rate. The Vote Solar Load Research Study demonstrates the value of customer-generated exports at 22¢ per kilowatt-hour. This value includes 10.57¢/kWh from utility-based benefits alone. Environmental and social benefits add an additional 12/03¢ of benefits.

While it is important to recognize that rooftop solar customers are still very much on the grid, utilizing utility infrastructure, one cannot fairly calculate the cost of this over the many benefits to the grid, customers, and community provided by rooftop solar.

Rooftop solar creates many system-wide benefits enjoyed by all Rocky Mountain Power service area customers and the utility itself. Distributed energy generation from rooftop solar contributes to grid flexibility and resilience and avoids costly transmission upgrades. Additionally, rooftop solar helps create consumer choice and keeps customer dollars local. A punitive export credit rate would take all of these benefits away and would further exclude low-income communities from consumer choice. Rapid implementation of the utility's proposed export credit rate would create a shock for rooftop solar customers and the solar industry. Reducing the export credit by 84% would also jeopardize thousands of local jobs and create additional cost risks for customers through fuel price volatility and major infrastructure development.

Rooftop solar helps to ensure safe, reliable, adequate, and reasonably priced utility service, the guidance by which the Commission is to assess rate proposals. Evidence brought forth throughout this proceeding and by dozens of cases throughout the country confirm that a reduced solar export credit is the inappropriate regulatory response to rooftop solar and will serve to disincentivize the integration of renewable energy into Utah's energy portfolio. Please consider increasing the export credit rate to reflect the real benefits created by rooftop solar.

Sincerely,
SarahAnn Whitbeck

To: psc@utah.gov

Dear Utah Public Service Commission,

I have two children and I love and have gained so much in my life from the outdoors. From an economic and conservation side of things, continuing to invest in dirty energy is not sustainable or wise. I want my girls to have the chance to enjoy the outdoors and the benefits of a healthy environment. We have solar at our house and we are happy to contribute to the improvement of health and air quality for our entire community, we need to encourage, not discourage this.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Dear Utah Public Service Commission,

Our world needs us to divest from fossil fuels. The freedom to pursue solar energy is paramount to the enhancement and security of our lives. Please. For the sake of all of us.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Thu, Sep 17, 2020 at 1:29 PM

Reply-To: Dee Rowland <rowland.dee@gmail.com>

To: Public Service Commissioners <psc@utah.gov>

Dear Commissioners,

As a Utah resident, I am writing to ask you to reject Rocky Mountain Power's proposed solar export credit rate (Docket No. 17-035-61).

Please don't inhibit this effective means of reducing our carbon footprint!

This utility's proposed export credit rate reduction from 9.4¢/kWh to ~ 1.5¢/kWh is nothing more than an attempt by Rocky Mountain Power to misrepresent the value of rooftop solar in order to stifle competition and monopolize renewable power generation. The evidence provided throughout this solar export proceeding has both demonstrated the value of customer-generated exports and shown that Rocky Mountain Power has failed to adequately assess the value of excess solar energy in its proposed rate change.

A better solution than the proposed rate, which, if approved, would be among the most punitive in the nation, is an increased solar export credit rate. The Vote Solar Load Research Study demonstrates the value of customer-generated exports at 22¢ per kilowatt-hour. This value includes 10.57¢/kWh from utility-based benefits alone. Environmental and social benefits add an additional 12/03¢ of benefits.

While it is important to recognize that rooftop solar customers are still very much on the grid, utilizing utility infrastructure, one cannot fairly calculate the cost of this over the many benefits to the grid, customers, and community provided by rooftop solar.

Rooftop solar creates many system-wide benefits enjoyed by all Rocky Mountain Power service area customers and the utility itself. Distributed energy generation from rooftop solar contributes to grid flexibility and resilience and avoids costly transmission upgrades. Additionally, rooftop solar helps create consumer choice and keeps customer dollars local. A punitive export credit rate would take all of these benefits away and would further exclude low-income communities from consumer choice. Rapid implementation of the utility's proposed export credit rate would create a shock for rooftop solar customers and the solar industry. Reducing the export credit by 84% would also jeopardize thousands of local jobs and create additional cost risks for customers through fuel price volatility and major infrastructure development.

Rooftop solar helps to ensure safe, reliable, adequate, and reasonably priced utility service, the guidance by which the Commission is to assess rate proposals. Evidence brought forth throughout this proceeding and by dozens of cases throughout the country confirm that a reduced solar export credit is the inappropriate regulatory response to rooftop solar and will serve to disincentivize the integration of renewable energy into Utah's energy portfolio. Please consider increasing the export credit rate to reflect the real benefits created by rooftop solar.

Sincerely,

Dee Rowland

Dear Utah Public Service Commission,

Greetings, I'm writing to urge you to protect and support Utah's Solar Industry. I installed rooftop solar several years ago when I could take advantage of the opportunities offered by the U of Utah. It is so critical at this time that all of us do everything we can to protect our beautiful environment, address climate change, and save our planet. It is critical to make rooftop solar available and affordable to everyone in this state, regardless of income status. Thank you for using your powers to better utilize our sun power.

Respectfully

Donna Hawxhurst

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Dear PSC,

This summer our family has been investigating solar panel options. We believe wholeheartedly in reducing our family's carbon footprint on the planet. We look forward to selling back clean energy to Rocky Mountain Power and hope very much that many of our neighbors will do the same. It has come to my attention that Rocky Mountain Power would like to limit Earth friendly net metering and reduce financial incentives for families investing in solar energy. Please use your influence to make solar panels desirable and affordable for every family in Utah. Thanks very much!!

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Personally, I don't understand why those in charge can't see that climate change is no joke. It's very, very real, and clearly massively destructive. We should be running, nay, jetting towards any and all solutions that can change the humanity-threatening path we currently tread. Any action that threatens the adoption of non-fossil fuel sources of energy should be held to a very high standard of proof-of-value. This action clearly fails that test. Please reject RMP's request.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Please do not allow Rocky Mountain Power to lower the rate at which it buys back excess power generated by residential solar panels. For the sake of clean air in the Salt Lake Valley, it is essential that we use more, not less, solar power, and RMP should be encouraging this means of acquiring excess power. All new residences and commercial buildings should be required to include solar power as a component, if not the sole source, of their energy systems, so that we can ultimately eliminate fossil fuel.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Me and nearly all my friends, colleagues and neighbors have all done our due diligence on investing in rooftop solar for our homes. But due to Utah's antiquated approaches to governing and pro fossil fuel biases, solar energy has been restricted to those with the Financial means to come out of pocket with tens of thousands. Fuck that. You all know who benefits from protecting the interests of coal and gas. Not the general public that's for sure. Stop it! Give tax breaks and government subsidies to those who invest in sustainable energies like solar And move this planet in the right direction!

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Elizabeth Peck

Dear Utah Public Service Commission,

I am asking you to continue to support rooftop solar. Is very important to me to do my part to help clean up the air in our Valley. It affects not only my lungs but quality of life during the inversion months. So, I put my money where my mouth is. I have already made the substantial investment for my roof top panels and while I cannot support all of my own electrical needs with these, I want to be able to do my part and would like other to have this be a cost-effective option over time. This is surely not a huge portion of UPLs income that is affected and they wipe the slates and keep any residual net meter balance each spring. Roof top solar provides employment and helps to clean our air a little. As a health care provider, I see how our admissions increase each winter during the inversion.

Please help to support roof top solar.

Thank you

Thank you

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. Dear Utah Public Service Commission,

We need clean air in the state, and especially in the SLC valley. Solar is one of the best ways to get there.

Please consider the value of solar -- from an environmental (esp human health) benefit, as well as the reduced need for transmission infrastructure and improved grid resilience.

I recognize that RMP needs to make money -- that should be accomplished through intelligent rate (re)design and not through bludgeoning solar into the ground.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

I installed solar several years ago. Now I understand you are bending to pressure to lower the net metering payback for excess power going to RMP. This will essentially kill the clean power movement in Utah, as it did in Colorado when they succumbed to the same pressures. Clean air is the right thing to do. Until Rocky Mt. Power can put a meter on the sun, they will try to coerce and bribe their way into more profit, at the expense of cleaner air and a lot of people involved in solar energy. Please do the right thing and keep Utah on the right path of solar energy. Thank you.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

John Julander
