Dear Utah Public Service Commission,

We can and must clean up our air. Let's go for the smoke free future

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Meredith Allender

Dear Public Service Commissionl

We are against the proposal to reduce the solar export credit. Some of us live l our homes seasonally. We would like the benefit of producing power when we don't use all of it.

Dear Utah Public Service Commission,

We need to promote non-polluting solar energy in our state. If it were more affordable, many more people would move to it and we would have cleaner air in Utah! Given our present pollution problems, this would be a win-win situation for all Utahns!

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

I have offered testimony to your commission in the past about this issue, and will reiterate what I reported at that time. You need to REJECT Rocky Mountain Power's proposal to later its solar net metering policies. Serve the PUBLIC, not the SERVICES. Any kWh that excess solar generation puts into the grid, RMP sells to other customers AT THE FULL RATE, despite not having done anything to produce that power. It is thus unconscienable and downright greedy not to credit the solar homeowner at the same rate. At this point, I am convinced we need to make RMP a PUBLIC utility again, as we had previously with Utah Power and Light.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. To: psc@utah.gov

Dear Utah Public Service Commission,

It is important that the PSC work for the betterment of all Utahns and for our future. Whether or not one believes humans are responsible, it is certain that the climate is warming. We need MORE solar installations to reduce our use of fossil fuels. Rocky Mountain Power's proposal to drastically reduce its payment for solar power generated by patrons will make it almost impossible for people to install solar panels, people like me. My house is not ideally situated to maximize solar panels, but I still hope to install them; solar power would provide me backup, save me some money, and I would be making a small contribution to reducing my carbon footprint. RM Power's proposal is also counterproductive for RM Power itself because increased solar power would mean they would not have to install as many new power plants, saving money for both them and for us. Please reject their proposal to reduce payments for those wishing to use net metering. Thank you.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Laura Cotts

Dear Utah Public Service Commission,

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. Dear Utah Public Service Commission,

I am appalled at how Rocky Mountain Power is, yet again, creating road blocks that prevent communities from living with renewable energy. Lowering the price you pay per kWh is a slap in the face when your company already pays below the national average in Utah.

Of all the states in our nation, Utah needs renewable energy. Lowering the price you pay will destroy our solar power market and will further contribute to our dismal air quality. Utah is ranked second to last in urban air quality (US News 2019). People are dying from respiratory conditions which have been made worse with the Coronavirus pandemic. RMP should be ashamed of how it is handling our environment and it's resources. Don't pay solar less for it's contribution; pay more.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

To me it is unconscionable that in this day and age any entity would not support sustainable energy in any form. This earth and our children depend on us being responsible stewards of this land.

I spent my savings to put solar panels on my house here in Utah. I would hope that you, my government and electric company would likewise enhance the affordability of solar in Utah. We need clean energy not coal.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Why would anyone want to quash progress and choice for the general public? I do not want to crush the solar industry here. Who would? If I can get solar panels and be more self sufficient why should I be limited to getting it via Rocky Mountain? That's shady. I could be misunderstanding it but that's how it seems to me. Cut out competition and be the only means of any power. I want self sufficiency and they can buy my excess and I want it without their hand in where solar panels come from. I don't get the fuss surrounding this topic. Rocky Mountain can eat rocks.

I am sick of limited choices that benefit big corporations especially one that has been against clean energy at every step. Always against change that is necessary. They are weaseling their way to monopolize power industry at every turn. Free market competition sure is scary for them. But that is how it should be. Right?

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Christopher Bush

Dear Utah Public Service Commission,

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. To: psc@utah.gov

Dear Utah Public Service Commission,

Your proposed action would make it extremely expensive for Utahns (and nearly impossible for low-income folks) to get solar panels on their homes and businesses. This would effectively decimate the solar industry, which is already hurting during the COVID-19 crisis.

Getting clean, affordable energy should be encouraged and made easier, not blocked by corporations that make millions in profits off dirty fuels.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. Dear Utah Public Service Commission,

By reducing the amount of money folks get for selling solar power back to the grid, solar panels become extremely difficult to pay off and especially inaccessible to low-income communities. This pricing scheme is unfair and clearly meant to hurt Utah's growing solar industry, which employs thousands of people.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

It is technologically, economically, and environmentally regressive to undermine the advancement of residential rooftop solar projects. Additionally, as Americans, these efforts are in effect an attack on our personal liberty to choose a consumer-owned alternative energy source as a primary source for personal consumption of electric power. This is particularly obscene after a massive power failure which left thousands of Utahns without power for several days.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Giving families and businesses in our community easy, affordable access to clean energy is imperative. The community's priority is not to make energy companies more money. The community's priority is to create a cleaner more sustainable future for ourselves and those that come after us. You can join the energy monopolies to squeeze every last drop out of this money cow, or you can maintain making substantial income, while caring for your communities and standing on the right side of history by ensuring affordable and wide-spread access to clean energy for as many people as we can possibly get it to.

-Dallin Lovegood

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Public Service Commission members,

I oppose the proposed rate because our air is already bad and anything to improve it would benefit the health of all Utah citizens. Getting solar panels are expensive, but good for the environment. To make them less beneficial would encourage fewer folks to participate in utilizing this natural resource.

Please do not pass the rate change.

Thank you,  
Audrey Bramwell

Public Service Commission members,

I oppose the proposed rate because I invested in solar power to reduce my rates and improve the environment. I made a careful decision based on the rates prior to making this significant investment. This change will not only directly impact those of us who have committed to helping the environment, but will discourage others, damage the solar industry and negatively impact jobs.

I strongly oppose the rate change.

Thanks

Dear Utah Public Service Commission,

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Aaron Garrett

Dear Utah Public Service Commission,

I think solar power on individual houses is extremely important for the future of our existence. It should be made available to everyone, as cheaply as possible. Coal-based power is not sustainable and is harming us all. With this in mind, forcing Utah residents to allow Rocky Mountain Power a monopoly is counter productive to encouraging change.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

In 1979 my husband and I built a passive solar home in MA and had a wood stove, no furnace necessary. Now I live in the land of endless sunshine and every building should be oriented to take advantage of the sun and have panels for collection of solar energy. Only monumental ignorance or corruption would conclude otherwise. Save the planet.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

The government should be doing everything they can to protect the citizens. Providing future power to everyone should be a priority. Solar power is an absolute necessity we have to transition to eventually. We will run out of fossil fuels and we are already seeing the effects of terrible air quality. Solar panels should be available for everyone. It's what we have to do to sustain power in Utah.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

John Turner

To: psc@utah.gov

Dear Utah Public Service Commission,

With Utah having some of the dirtiest air in the nation it seems like a no brainer to encourage residents to use solar paneling for their energy. Also thousands of solar development jobs would be lost in Utah if Rocky Mountain power gets its way. We're an example of how Rocky Mountain power has benefited from our use of solar power. Over the last 13 months we've exported 4.4 MW h back to the GRID. This is enough to supply the average home with five months of electric power. Shouldn't Rocky Mountain power be reimbursing us the same amount that they charge us? With the new rates that Rocky Mountain power are proposing less people will want to convert to solar power especially those with lower incomes. With increasing population this means our air quality will continue to decline becoming less and less healthy for those who live here. Our state needs to be looking forward to clean energy not looking backwards to dirty fossil fuels.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Dear Utah Public Service Commission,

Utah Public "Service" Commission? What world are we living in, Utah? Fossil fuel vs. clean energy is a no-brainer in so many countries and states. This is an unacceptable action. To create blocks for transitioning to clean energy while enriching what I consider to be evil people who, at the expense of this planet, our respiratory health, innovation and the sustainability of this planet is simply wrong.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. Dear Utah Public Service Commission,

Please don't take away our freedom to choose rooftop solar as an energy solution. The effects of climate change are upon us, and we need to be making progress in all the ways we can. Refusing to progress and allow us to decide for ourselves goes against our rights as Utahns. Please do the right thing by not allowing the proposal to go through.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. Dear Utah Public Service Commission,

Rocky Mountain, please consider the negative implications you would have on people's lives and on our planet if you choose to decrease in the rate that rooftop solar owners get for the electricity that they return to the grid. Not only would it be unethical but you would be responsible for de-incentivizing a more affordable, more sustainable resource. Are you really that greedy and uncaring of our children's future?

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Maggie Lundgren

Dear Utah Public Service Commission,

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. Dear Utah Public Service Commission,

I believe that global warming exists and that we are contributing to it by our continued burning of fossil fuels. I also believe people can help turn this around by developing and using clean energy sources.

I believe that regulatory agencies should actively promote use of alternate energy sources. I think that corporations, left to their own devices, will attempt to maximize their profits at the expense of the environment. It is up to you, the Utah Public Service Commission, to provide regulation that will encourage the general public to reduce their dependence on fossil fuel generated power and try alternate sources. I encourage you to not allow RMP to reduce the value of the power generated from solar panels and returned to the power grid.

This is the right thing to do for our state, our country and the world.

Stephen Livingston

Dear Utah Public Service Commission,

Using solar and and other renewable energy sources is a no-brainer and the future. Nevada tried virtually the same tactics to kill the solar industry, and it FAILED dramatically to the embarrassment of the legislature. The people spoke loudly and legislation was changed to bring solar back and now it is a thriving industry with perhaps more jobs than oil has in the state, and the future is certainly brighter. The same will happen for Utah if Rocky Mountain Power has its way. Will you support the people of Utah, or be bought by the oil industry??

As a resident of Utah, I am urging you to reject Rocky Mountain Power?s proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Rooftop solar provides benefits beyond just the kilowatt hours of electricity it creates. It helps negate the need to build costly new power plants and helps diversify the power sources in any given neighborhood, increasing resiliency.

It's also a public good; reducing greenhouse gas emissions helps everyone, and we should be incentivizing individual homeowners to invest in a clean future.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Solar-- clean environmentally responsible, sustainable. Why would you not.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Linda Spencer

If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Dear Commissioners,

As a Utah resident, I am writing to ask you to reject Rocky Mountain Power's proposed solar export credit rate (Docket No. 17-035-61).

This utility's proposed export credit rate reduction from 9.4¢/kWh to ~ 1.5¢/kWh is nothing more than an attempt by Rocky Mountain Power to misrepresent the value of rooftop solar in order to stifle competition and monopolize renewable power generation. The evidence provided throughout this solar export proceeding has both demonstrated the value of customer-generated exports and shown that Rocky Mountain Power has failed to adequately assess the value of excess solar energy in its proposed rate change.

A better solution than the proposed rate, which, if approved, would be among the most punitive in the nation, is an increased solar export credit rate. The Vote Solar Load Research Study demonstrates the value of customer-generated exports at 22¢ per kilowatt-hour. This value includes 10.57¢/kWh from utility-based benefits alone. Environmental and social benefits add an additional 12/03¢ of benefits.

While it is important to recognize that rooftop solar customers are still very much on the grid, utilizing utility infrastructure, one cannot fairly calculate the cost of this over the many benefits to the grid, customers, and community provided by rooftop solar.

Rooftop solar creates many system-wide benefits enjoyed by all Rocky Mountain Power service area customers and the utility itself. Distributed energy generation from rooftop solar contributes to grid flexibility and resilience and avoids costly transmission upgrades. Additionally, rooftop solar helps create consumer choice and keeps customer dollars local. A punitive export credit rate would take all of these benefits away and would further exclude low-income communities from consumer choice. Rapid implementation of the utility's proposed export credit rate would create a shock for rooftop solar customers and the solar industry. Reducing the export credit by 84% would also jeopardize thousands of local jobs and create additional cost risks for customers through fuel price volatility and major infrastructure development.

Rooftop solar helps to ensure safe, reliable, adequate, and reasonably priced utility service, the guidance by which the Commission is to assess rate proposals. Evidence brought forth throughout this proceeding and by dozens of cases throughout the country confirm that a reduced solar export credit is the inappropriate regulatory response to rooftop solar and will serve to disincentivize the integration of renewable energy into Utah's energy portfolio. Please consider increasing the export credit rate to reflect the real benefits created by rooftop solar.

Sincerely,  
Cash Meyerhoffer

Dear Utah Public Service Commission,

With 222 sunny days per year, Utah should be at the forefront of solar-power generation in the U.S. This proposal by Rocky Mountain Power is nothing more than a cynical power-and-profit grab. If they can't have a "piece of the solar pie," they want to destroy solar power as a viable source of electricity for the citizens of our state. Send them a message that THE PEOPLE of Utah decide its future, NOT RMP. Commissioners, please do what you know is right: Protect the future of solar power in Utah.

Sincerely,

Christine Kirkham

Dear Utah Public Service Commission,

Let's move towards smart solutions! Let's transition from shameful practices to being proud of the decisions we are making as a society!

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Dear Utah Public Service Commission,

Our entire west coast is on fire. I grew up in California and we never had fire seasons this bad. This is a new development these past 10-12 years due to climate change. Hurricane season is so bad they're already into the second list of names. Again, due to climate change. This is our future unless we do something about it. Solar is one of the things that can help our climate, and it's imperative that we still have access to it and fair pricing here in Utah so we can do our part.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. To: psc@utah.gov

Docket 17-035-61

I want to make this clear we do not have roof top solar for financial reasons. We got solar because its the right thing to do. We don't care about the decrease in return. We do care that Utah should be encouraging solar not discouraging solar energy. We have air quality issues, there are many that do care about lowering their energy bill.

We still pay for power many 220 appliances are not supported by solar.

Please oppose this attack by Rocky Mt. Power

Dear Utah Public Service Commission,

It would be very nice to see a summary of bullet points - pros and cons - from each side. It is impossible to have an opinion on this without knowing the facts.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Glen Martinsen

Dear Utah Public Service Commission,

It's not just because of the fires that Utah has some of the worst air in the country, but we also know that people are unlikely to give up their idling cars. I have solar panels to do my part, and more Utahns should be doing the same. However, we need incentives to buy solar and use it. It's that simple. To discourage the use of solar panels through rates is simply unconscionable in this time of climate emergency.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Dear Commissioners,

The foundation of our free enterprise system is open competition. The motion by Rocky Mountain Power (PacifiCorp) to effectively take home solar energy "for free" is a monopolistic move against its own customers. We just would like a fair share in the energy production process.

Our home generation is good for Utah, preventing climate change and cleaning the air--it is 100% renewable.

PacifiCorp should be focusing on their own transition to clean energy instead of trying to suppress ours. May I suggest that the Commission continue to require buyback at two cents below the base retail rate until the Company's delivered power is at least 80% renewable!

Rocky Mountain Power says that their cost of generation is going down. With greater inclusion of distributed generation, distribution cost should also go down. It might be a good idea for Rocky Mountain Power to have lower energy rates rather than increases.

Sincerely,

Dear Commissioners,

As a Utah resident, I am writing to ask you to reject Rocky Mountain Power's proposed solar export credit rate (Docket No. 17-035-61).

This utility's proposed export credit rate reduction from 9.4¢/kWh to ~ 1.5¢/kWh is nothing more than an attempt by Rocky Mountain Power to misrepresent the value of rooftop solar in order to stifle competition and monopolize renewable power generation. The evidence provided throughout this solar export proceeding has both demonstrated the value of customer-generated exports and shown that Rocky Mountain Power has failed to adequately assess the value of excess solar energy in its proposed rate change.

A better solution than the proposed rate, which, if approved, would be among the most punitive in the nation, is an increased solar export credit rate. The Vote Solar Load Research Study demonstrates the value of customer-generated exports at 22¢ per kilowatt-hour. This value includes 10.57¢/kWh from utility-based benefits alone. Environmental and social benefits add an additional 12/03¢ of benefits.

While it is important to recognize that rooftop solar customers are still very much on the grid, utilizing utility infrastructure, one cannot fairly calculate the cost of this over the many benefits to the grid, customers, and community provided by rooftop solar.

Rooftop solar creates many system-wide benefits enjoyed by all Rocky Mountain Power service area customers and the utility itself. Distributed energy generation from rooftop solar contributes to grid flexibility and resilience and avoids costly transmission upgrades. Additionally, rooftop solar helps create consumer choice and keeps customer dollars local. A punitive export credit rate would take all of these benefits away and would further exclude low-income communities from consumer choice. Rapid implementation of the utility's proposed export credit rate would create a shock for rooftop solar customers and the solar industry. Reducing the export credit by 84% would also jeopardize thousands of local jobs and create additional cost risks for customers through fuel price volatility and major infrastructure development.

Rooftop solar helps to ensure safe, reliable, adequate, and reasonably priced utility service, the guidance by which the Commission is to assess rate proposals. Evidence brought forth throughout this proceeding and by dozens of cases throughout the country confirm that a reduced solar export credit is the inappropriate regulatory response to rooftop solar and will serve to disincentivize the integration of renewable energy into Utah's energy portfolio. Please consider increasing the export credit rate to reflect the real benefits created by rooftop solar.

Sincerely,  
Michele Brown-Riding

Climate change

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Gary Jacobson

Dear Utah Public Service Commission,

Rooftop solar is the future. Climate change is heating up and drying out the West. We have to do what we can to slow these changes down. Thanks, Gregg Alex, Draper, UT

## Comments on Docket No. 17-035-61

1 message

---

**PRESTON S CHIARO** <pschiaro@me.com>  
To: psc@utah.gov

Sat, Sep 26, 2020 at 8:32 AM

I have lived in Utah for more than 15 years, and have been a customer of Rocky Mountain Power the entire time. I do not currently have any solar generation at my house; nonetheless, I am writing to ask you to reject Rocky Mountain Power's proposed solar export credit rate (Docket No. 17-035-61).

This proposal to reduce the export credit rate from 9.4¢/kWh to ~ 1.5¢/kWh is an apparent attempt by Rocky Mountain Power to seriously undervalue rooftop solar. This will stifle competition, monopolize renewable power generation, and punish those who have added or plan to add solar generation capacity. The evidence provided throughout this solar export proceeding has both demonstrated the value of customer-generated exports and shown that Rocky Mountain Power has failed to adequately assess the value of excess solar energy in its proposed rate change.

The Vote Solar Load Research Study demonstrates the value of customer-generated exports at 22¢ per kilowatt-hour. This value includes 10.57¢/kWh from utility-based benefits alone. Environmental and social benefits add an additional 12.03¢ of benefits. The credit rate should be substantially increased to capture the real value of home solar generation. Rooftop solar creates many system-wide benefits enjoyed by all Rocky Mountain Power service area customers and the utility itself. Distributed energy generation from rooftop solar contributes to grid flexibility and resilience and avoids costly transmission upgrades. Additionally, rooftop solar helps create consumer choice and keeps customer dollars local. Rooftop solar has other societal benefits that are harder to quantify, i.e., solar generation employs more people per kWh generated than coal, natural gas, or other nonrenewable resources.

I know that virtually all rooftop solar customers are still very much on the grid, utilizing utility infrastructure, but one cannot fairly calculate the cost of this over the many benefits to the grid, customers, and community provided by rooftop solar.

A punitive export credit rate would take all of these benefits away and would further exclude low-income communities from consumer choice. Rapid implementation of the utility's proposed export credit rate would create a shock for rooftop solar customers and the solar industry. Reducing the export credit by 84% would also jeopardize thousands of local jobs and create additional cost risks for customers through fuel price volatility and major infrastructure development.

The Commission is tasked to assess rate proposals to ensure safe, reliable, adequate, and reasonably priced utility service. Reducing solar export credits is an inappropriate regulatory response to rooftop solar. It will disincentivize the integration of renewable energy into Utah's energy portfolio. Please consider **increasing** the export credit rate to reflect the broad range of benefits created by rooftop solar.

Thank you for considering these comments.

Warm regards,  
Preston Chiaro

Dear Utah Public Service Commission,

K, polite part over.

I'm an RMP customer pretty much because I have to be -- they're the only game in town. And because we can't afford our own solar panels (nor would our current roof hold them). That doesn't stop me from thinking they're a bunch of profit-addled robber barons who don't give a shit about anything but their bottom line.

They HAVE a Solar Subscriber program--they could switch over to solar and wind and be back in waist-deep profits within a decade. My guess is someone high up at RMP also has stock in fossil fuel industries, or is getting trips to Club Med from oil and coal execs.

"Let the world burn, throw the peons out onto the street, as long as I get my money"--that's the attitude of these jackasses. Reminder, gents: destroying the planet KILLS YOUR CUSTOMERS. Destroying Utah solar makes you a dick, which KILLS YOUR CREDIBILITY AND REPUTATION. Common sense, but sadly lacking at RMP.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Commissioners,

As a Utah resident, I am writing to ask you to reject Rocky Mountain Power's proposed solar export credit rate (Docket No. 17-035-61).

This utility's proposed export credit rate reduction from 9.4¢/kWh to ~ 1.5¢/kWh is nothing more than an attempt by Rocky Mountain Power to misrepresent the value of rooftop solar in order to stifle competition and monopolize renewable power generation. The evidence provided throughout this solar export proceeding has both demonstrated the value of customer-generated exports and shown that Rocky Mountain Power has failed to adequately assess the value of excess solar energy in its proposed rate change.

A better solution than the proposed rate, which, if approved, would be among the most punitive in the nation, is an increased solar export credit rate. The Vote Solar Load Research Study demonstrates the value of customer-generated exports at 22¢ per kilowatt-hour. This value includes 10.57¢/kWh from utility-based benefits alone. Environmental and social benefits add an additional 12/03¢ of benefits.

While it is important to recognize that rooftop solar customers are still very much on the grid, utilizing utility infrastructure, one cannot fairly calculate the cost of this over the many benefits to the grid, customers, and community provided by rooftop solar.

Rooftop solar creates many system-wide benefits enjoyed by all Rocky Mountain Power service area customers and the utility itself. Distributed energy generation from rooftop solar contributes to grid flexibility and resilience and avoids costly transmission upgrades. Additionally, rooftop solar helps create consumer choice and keeps customer dollars local. A punitive export credit rate would take all of these benefits away and would further exclude low-income communities from consumer choice. Rapid implementation of the utility's proposed export credit rate would create a shock for rooftop solar customers and the solar industry. Reducing the export credit by 84% would also jeopardize thousands of local jobs and create additional cost risks for customers through fuel price volatility and major infrastructure development.

Rooftop solar helps to ensure safe, reliable, adequate, and reasonably priced utility service, the guidance by which the Commission is to assess rate proposals. Evidence brought forth throughout this proceeding and by dozens of cases throughout the country confirm that a reduced solar export credit is the inappropriate regulatory response to rooftop solar and will serve to disincentivize the integration of renewable energy into Utah's energy portfolio. Please consider increasing the export credit rate to reflect the real benefits created by rooftop solar.

Sincerely,  
Dan Baird

## Rooftop solar in Utah

1 message

---

**Kathleen Bennett** <kathleen.bennett@utah.edu>  
To: psc@utah.gov

Fri, Sep 25, 2020 at 11:02 PM

Hello,

My name is Kathleen Bennett and I live in North Salt Lake. As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Additionally, this issue is important in the context of global climate change. Widespread availability of clean energy will help to slow the spread of climate change. Decreased reliability on power lines may help Utah prevent the kind of wildfires caused by power lines that occur in California.

Best,  
Kathleen

Dear Utah Public Service Commission,

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Sam Untersee

As a proudly conservative state, let's not devalue rooftop solar for individual consumers, or anyone. Let's let the market guide us to a freer market; where regular citizens can empower themselves and serve the grid as well (true neighbor-helping-neighbor). It's an evolving world, and I'm okay with it.

Thank you for listening!

Best,  
Jeremy R

Dear Commissioners,

As a Utah resident, I am writing to ask you to reject Rocky Mountain Power's proposed solar export credit rate (Docket No. 17-035-61).

This utility's proposed export credit rate reduction from 9.4¢/kWh to ~ 1.5¢/kWh is nothing more than an attempt by Rocky Mountain Power to misrepresent the value of rooftop solar in order to stifle competition and monopolize renewable power generation. The evidence provided throughout this solar export proceeding has both demonstrated the value of customer-generated exports and shown that Rocky Mountain Power has failed to adequately assess the value of excess solar energy in its proposed rate change.

A better solution than the proposed rate, which, if approved, would be among the most punitive in the nation, is an increased solar export credit rate. The Vote Solar Load Research Study demonstrates the value of customer-generated exports at 22¢ per kilowatt-hour. This value includes 10.57¢/kWh from utility-based benefits alone. Environmental and social benefits add an additional 12/03¢ of benefits.

While it is important to recognize that rooftop solar customers are still very much on the grid, utilizing utility infrastructure, one cannot fairly calculate the cost of this over the many benefits to the grid, customers, and community provided by rooftop solar.

Rooftop solar creates many system-wide benefits enjoyed by all Rocky Mountain Power service area customers and the utility itself. Distributed energy generation from rooftop solar contributes to grid flexibility and resilience and avoids costly transmission upgrades. Additionally, rooftop solar helps create consumer choice and keeps customer dollars local. A punitive export credit rate would take all of these benefits away and would further exclude low-income communities from consumer choice. Rapid implementation of the utility's proposed export credit rate would create a shock for rooftop solar customers and the solar industry. Reducing the export credit by 84% would also jeopardize thousands of local jobs and create additional cost risks for customers through fuel price volatility and major infrastructure development.

Rooftop solar helps to ensure safe, reliable, adequate, and reasonably priced utility service, the guidance by which the Commission is to assess rate proposals. Evidence brought forth throughout this proceeding and by dozens of cases throughout the country confirm that a reduced solar export credit is the inappropriate regulatory response to rooftop solar and will serve to disincentivize the integration of renewable energy into Utah's energy portfolio. Please consider increasing the export credit rate to reflect the real benefits created by rooftop solar.

Sincerely,  
Carolyn Pierce

Dear Utah Public Service Commission,

This is an issue near and dear to my heart. The last 6 years of my life have been shaped from getting into the solar industry and being an installer. I currently live off of solar power, and I believe every human should have the right and incentive to do the same ! There is so much energy the sun gives us, why let it go to waste !

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

We are stronger when we have a variety of sources for our power. We must keep up the incentives for people to get solar panels put on their houses. And I want to do what's right for future generations and support clean power.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Holly Flanders

Dear Utah Public Service Commission,

Residential rooftop solar is an important way for people to help mitigate the dual damage of air pollution and the deadly harm from the climate disaster we now face. Permitting RMP to slash the credit they provide residential rooftop solar providers will have the consequence of contributing to air pollution, the climate crisis and the elimination very good clean jobs in Utah. in the public interest,RMP should not be allowed to lower the rate they pay to residential Rooftop solar providers.

As a resident of Utah, I am urging you to reject Rocky Mountain Power?s proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Reply-To: skn3612@q.com

To: psc@utah.gov

Dear Utah Public Service Commission,

I feel that RMP is trying to unfailly extort money from all the solar users by trying to renegotiate the amount they reimburse us for the electricity we generate. I doubt very highly that they would agree to receive the pittance they are offering us for the electricity we produce!

Families and businesses that invest in solar deserve fair compensation for the valuable energy they send back to the electric grid.

Rooftop solar customers can provide 15 times the value to the electric grid than what Rocky Mountain Power proposes.

RMP's proposal could cut the energy compensation for new solar owners by 84%.

RMP's proposal for compensating solar energy could put Utah's 7,000 local solar jobs at risk.

For Utah to move forward on the path to renewable energy for all and a strong clean economy, it's important to protect our customer rights by ensuring solar owners are fairly compensated for the energy they contribute.

Sicerely,

Stanford Neering

To: Public Service Commissioners <psc@utah.gov>

Sun, Sep 27, 2020 at 1:30 PM

Dear Commissioners,

As a Utah resident, I am writing to ask you to reject Rocky Mountain Power's proposed solar export credit rate (Docket No. 17-035-61).

This utility's proposed export credit rate reduction from 9.4¢/kWh to ~ 1.5¢/kWh is nothing more than an attempt by Rocky Mountain Power to misrepresent the value of rooftop solar in order to stifle competition and monopolize renewable power generation. The evidence provided throughout this solar export proceeding has both demonstrated the value of customer-generated exports and shown that Rocky Mountain Power has failed to adequately assess the value of excess solar energy in its proposed rate change.

A better solution than the proposed rate, which, if approved, would be among the most punitive in the nation, is an increased solar export credit rate. The Vote Solar Load Research Study demonstrates the value of customer-generated exports at 22¢ per kilowatt-hour. This value includes 10.57¢/kWh from utility-based benefits alone. Environmental and social benefits add an additional 12/03¢ of benefits.

While it is important to recognize that rooftop solar customers are still very much on the grid, utilizing utility infrastructure, one cannot fairly calculate the cost of this over the many benefits to the grid, customers, and community provided by rooftop solar.

Rooftop solar creates many system-wide benefits enjoyed by all Rocky Mountain Power service area customers and the utility itself. Distributed energy generation from rooftop solar contributes to grid flexibility and resilience and avoids costly transmission upgrades. Additionally, rooftop solar helps create consumer choice and keeps customer dollars local. A punitive export credit rate would take all of these benefits away and would further exclude low-income communities from consumer choice. Rapid implementation of the utility's proposed export credit rate would create a shock for rooftop solar customers and the solar industry. Reducing the export credit by 84% would also jeopardize thousands of local jobs and create additional cost risks for customers through fuel price volatility and major infrastructure development.

Rooftop solar helps to ensure safe, reliable, adequate, and reasonably priced utility service, the guidance by which the Commission is to assess rate proposals. Evidence brought forth throughout this proceeding and by dozens of cases throughout the country confirm that a reduced solar export credit is the inappropriate regulatory response to rooftop solar and will serve to disincentivize the integration of renewable energy into Utah's energy portfolio. Please consider increasing the export credit rate to reflect the real benefits created by rooftop solar.

Sincerely,  
Bruce Chapman  
523 E 1400 N  
Bountiful, UT 84010

Dear Utah Public Service Commission,

We need to be smarter about how we use energy. Solar power is efficient and effective. It is also far less costly to employ.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

PHYLLIS SAFMAN

To: Public Service Commissioners &lt;psc@utah.gov&gt;

Dear Commissioners,

As a Utah resident, I am writing to ask you to reject Rocky Mountain Power's proposed solar export credit rate (Docket No. 17-035-61).

This utility's proposed export credit rate reduction from 9.4¢/kWh to ~ 1.5¢/kWh is nothing more than an attempt by Rocky Mountain Power to misrepresent the value of rooftop solar in order to stifle competition and monopolize renewable power generation. The evidence provided throughout this solar export proceeding has both demonstrated the value of customer-generated exports and shown that Rocky Mountain Power has failed to adequately assess the value of excess solar energy in its proposed rate change.

A better solution than the proposed rate, which, if approved, would be among the most punitive in the nation, is an increased solar export credit rate. The Vote Solar Load Research Study demonstrates the value of customer-generated exports at 22¢ per kilowatt-hour. This value includes 10.57¢/kWh from utility-based benefits alone. Environmental and social benefits add an additional 12/03¢ of benefits.

While it is important to recognize that rooftop solar customers are still very much on the grid, utilizing utility infrastructure, one cannot fairly calculate the cost of this over the many benefits to the grid, customers, and community provided by rooftop solar.

Rooftop solar creates many system-wide benefits enjoyed by all Rocky Mountain Power service area customers and the utility itself. Distributed energy generation from rooftop solar contributes to grid flexibility and resilience and avoids costly transmission upgrades. Additionally, rooftop solar helps create consumer choice and keeps customer dollars local. A punitive export credit rate would take all of these benefits away and would further exclude low-income communities from consumer choice. Rapid implementation of the utility's proposed export credit rate would create a shock for rooftop solar customers and the solar industry. Reducing the export credit by 84% would also jeopardize thousands of local jobs and create additional cost risks for customers through fuel price volatility and major infrastructure development.

Rooftop solar helps to ensure safe, reliable, adequate, and reasonably priced utility service, the guidance by which the Commission is to assess rate proposals. Evidence brought forth throughout this proceeding and by dozens of cases throughout the country confirm that a reduced solar export credit is the inappropriate regulatory response to rooftop solar and will serve to disincentivize the integration of renewable energy into Utah's energy portfolio. Please consider increasing the export credit rate to reflect the real benefits created by rooftop solar.

Sincerely,  
Jason Wills

Dear Utah Public Service Commission,

I moved to Utah for the snow, but I stayed for the sun. I'm training for the US Ski Mountaineering Team in the 2026 Olympics in Cortina Italy. I was training for the 2022 Olympics in Beijing, but then I got pregnant, a pandemic baby. I'm due in four weeks. I'm planning on calling Utah home as it has ALMOST EVERYTHING for training. Altitude, great snow, great people. Great mountains. Fantastic ski lines. However, I'm an endurance athlete. In ski mountaineering, you climb the mountain before you ski down it. A race to the top and the bottom. The number one thing that feeds my muscles is air. And Utah has poor air quality. I am willing to train with a respirator, which I do after long bouts of low pressure, but I am not willing to give my son the elevated risk of asthma. We need cleaner energy because we need cleaner air. Please show me you are willing to support clean energy because I'd really like to stay in Utah, with my new family and chase my dreams.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Please do not go through with Rocky Mountain Power's proposal to devalue rooftop solar power. I put solar panels on my roof to reduce energy costs long-term and reduce greenhouse gas emissions. The only way I could afford to do this was because of the rate that my excess energy was purchased at. Please reinstate net metering and increase the export credit rate to reflect the real value rooftop solar creates. Vote Solar has studied the issues and recommends 22 cents per kilowatt-hour. Also, solar employs a lot of people in our state and supports small businesses and they would suffer if this rate change occurs.

Dear Utah Public Service Commission,

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Carol Smith

Good Morning respected PSC committee member,

I'm certain that you've read and heard from many in the Renewable Energy space who've mentioned how their livelihood is hinged on your decision in regards to the proposed rate change as there are many Utah jobs connected to this industry. While these folks including myself would be directly impacted by a vote in favor of a 1.5 cent credit for exported energy, I ask you to consider something else; There are many solar install companies who would suffer and possibly go out of business leaving tens of thousands of Utah home and business owners without any sort of warranty for the Solar systems installed on their property.

The above scenario personally happened to myself due to the public hearing of a rate change a few years back and hence hurt Solar businesses and helped put a few install companies out of business.

I ask that you consider a drastically less abrupt change in the rate structure for private energy generation going onto the RMP grid. I suspect that as Energy Storage is adopted and incentivized, that the issue of Solar power pushed onto the grid will be corrected. Until then, I'd ask that you please vote against the RMP proposed rate.

Thank you for your consideration!

---

To: psc@utah.gov

Dear Utah Public Service Commission,

Utah has allowed industry to dominate the landscape. Salt Lake is the only city that I know of outside the gulf coast that allows oil refineries to be at the center of the city, mere blocks from where people live, that has a mine scarring the mountainous landscape for which we are famous and will continue to pollute the water and environment for years to come. These antiquated forms of industry are continually propped up by subsidies and the stronghold that they have developed over time.

It is time for Utah to truly evolve, to become an innovative state that sees a future of clean air by more than just lip service. Solar energy makes sense for Utah, it is time to embrace it and the only way of doing that is to offer the same incentives that antiquated industries initially received and have depended on. Rocky Mtn. Power should be an asset in promoting the future, not merely an old dog that will prevent the future from being anything but bright.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. ## Utah Rooftop solar power

1 message

---

**David LEMP** <DLEMP@westech-inc.com>

Mon, Sep 28, 2020 at 8:59 AM

To: "psc@utah.gov" <psc@utah.gov>

Good morning,

I have just been made aware of the efforts of Rocky Mountain Power to, once again, alter what rooftop solar customers pay as far as rates go. As a rooftop solar customer.....from the time I had panels put on my roof, I have adhered to the requirements placed upon me by the state, RMP and inspection requirements to have the installation done. It is quite frustrating that Rocky Mountain Power can come back, after my hard earned money has already been spent to achieve some stability in my power bill, and attempt to change the rules to benefit themselves. The state has offered incentives to get people to make the switch to rooftop for years as has the federal government. Well it worked.....we made the change, not only for the financial benefit, but mostly for the environmental benefit of having solar.

I know that currently RMP charges it's grid customers about 10 cents per kwh. And currently, I get a 1 to 1 kwh credit. I believe this is fair as every watt of energy that I produce but don't use, RMP sells that free for them energy to another customer. They didn't generate it, I did. At the end of the year, I have credits on my bill that zero out and I'm never compensated for. I'm ok with this. I don't believe it's fair, no, but I can deal with that. Now RMP wants to give me 1.5 cents for the kwh's I generate and I find this just a bit dishonest and offensive.

At this time, I pay a connection fee to RMP to be connected to the grid. Is this not enough?

I urge this body to reject RMP's bid to alter our rates when we followed the rules. We did our part, now all others concerned need to adhere to their side of the agreement.

Sincerely,

*David Lemp*

Dear Utah Public Service Commission,

It is important to me that renewable energy sources are accessible because two people in my family have asthma, which is partially caused and worsened by air pollution from nonrenewable energy production. The growing solar industry would help Utah be a cleaner and happier state and Utahns deserve a right to choose to support the renewable power industry at a reasonable price.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. I Bruce W. Chapman of Bountiful Utah am adamantly opposed to RMP's proposal to the Public Service Commission regarding "Docket No. 17-035-61"

I am firmly letting you the Public Service Commission know that We The People want a fair rate for rooftop solar! You OUR Commissioners must protect the common sense of SOLAR!

Have you heard of GLOBAL WARMING!

Well then, why not do something to help protect OUR LIVABLE ENVIRONMENT!

DO YOUR JOB!!! PROMOTE AND SUPPORT THE IMMEDIATE PROLIFERATION OF SOLAR POWER!!!

YOU AND YOUR FAMILIES NEED SOLAR TOO!

80% of the world must be powered by solar, in fact it must! Or we are all in big trouble!

-Elon Musk

Thank you,

Bruce W. Chapman

Dear Utah Public Service Commission,

Solar is another way to reduce dependency on oil and it will help increase air quality and RMP nor any other small utilities like Prove, Spanish Fork etc should be able to eliminate or refuse it. In fact HOAs should not be allowed to refuse solar of any kind either.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Keep Solar Power an option! No energy company should have the right to keep out other energy options, especially when the benefits go to the customer and the company (selling it back to power companies) and helps keep the environmental pollution to a minimum. As a Utah citizen, I have been concerned with the lack of infrastructure and opportunities to allow solar power on people's homes and the incompatibility of the current structure. I say 'yes' to a solar-powered Utah.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Dear Utah Public Service Commission,

My wife and I are new homeowners and have been saving up for solar panels, something that would have helped a great deal during the recent windstorm and power outage. This change will make it harder for us to afford the installation and, ironically, make it harder for Rocky Mountain Power... imagine if half of the homes that had power outages during the windstorm had solar power and batteries? RMP would have been able to help the most desperate citizens first. Instead, if this initiative passes, we're stuck with the same old system.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Dear Utah Public Service Commission,

Utah needs companies to invest in clean energy! I lived in Utah county until 2019 and endured many years of terribly polluted air. Bad air was a large part of why I moved away but I still believe that power companies must move to clean energy including solar. Utah is great for solar energy because we get so much sun, so why make solar unaffordable for most of the population? It doesn't make sense. Utahns deserve to clean air!

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. Dear Utah Public Service Commission,

Dear RMP,

I have 13 solar panels on my rooftop, and am about to add three more.

Please don't go forward with disincentivising Utahns from buying rooftop solar systems. The power we generate for the collective grid helps everyone -- you, us, and the planet. We need more solar, from the widest variety of sources, not less. Pressing this proposal before the PSC only makes you look greedy, and that's not a good look.

A warming planet needs broad solutions, and de-centralizing the power grid worldwide is a great way to achieve goals set by scientists in agreement that we need to do something yesterday to reverse the climate trends.

Please don't be an irresponsible company. Your reputation depends on being a good global example. Stop the effort to change the rates that solar customers are charged in Utah. It's for your own good, as you have families too.

Thanks,

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Dear Commissioners,

As a Utah resident, I am writing to ask you to reject Rocky Mountain Power's proposed solar export credit rate (Docket No. 17-035-61).

This utility's proposed export credit rate reduction from 9.4¢/kWh to ~ 1.5¢/kWh is nothing more than an attempt by Rocky Mountain Power to misrepresent the value of rooftop solar in order to stifle competition and monopolize renewable power generation. The evidence provided throughout this solar export proceeding has both demonstrated the value of customer-generated exports and shown that Rocky Mountain Power has failed to adequately assess the value of excess solar energy in its proposed rate change.

A better solution than the proposed rate, which, if approved, would be among the most punitive in the nation, is an increased solar export credit rate. The Vote Solar Load Research Study demonstrates the value of customer-generated exports at 22¢ per kilowatt-hour. This value includes 10.57¢/kWh from utility-based benefits alone. Environmental and social benefits add an additional 12/03¢ of benefits.

While it is important to recognize that rooftop solar customers are still very much on the grid, utilizing utility infrastructure, one cannot fairly calculate the cost of this over the many benefits to the grid, customers, and community provided by rooftop solar.

Rooftop solar creates many system-wide benefits enjoyed by all Rocky Mountain Power service area customers and the utility itself. Distributed energy generation from rooftop solar contributes to grid flexibility and resilience and avoids costly transmission upgrades. Additionally, rooftop solar helps create consumer choice and keeps customer dollars local. A punitive export credit rate would take all of these benefits away and would further exclude low-income communities from consumer choice. Rapid implementation of the utility's proposed export credit rate would create a shock for rooftop solar customers and the solar industry. Reducing the export credit by 84% would also jeopardize thousands of local jobs and create additional cost risks for customers through fuel price volatility and major infrastructure development.

Rooftop solar helps to ensure safe, reliable, adequate, and reasonably priced utility service, the guidance by which the Commission is to assess rate proposals. Evidence brought forth throughout this proceeding and by dozens of cases throughout the country confirm that a reduced solar export credit is the inappropriate regulatory response to rooftop solar and will serve to disincentivize the integration of renewable energy into Utah's energy portfolio. Please consider increasing the export credit rate to reflect the real benefits created by rooftop solar.

Thank you for your time,  
Jerrad Pullum

Sincerely,  
Jerrad Pullum

Dear PSC:

I write to comment in opposition to the proposed RMP rate. As this Commission has and will continue to hear from experts, everyone enjoys the benefits provided by increased residential solar, including reduced pollution and the economic benefits created by the employment of those in the rooftop solar industry. As a panel owner, I was willing to spend money far in excess of what made financial sense in order to do some good for the community and the environment. This Commission should take steps to facilitate others in making that same decision and purchasing rooftop solar equipment to take advantage of the abundance of solar radiation that we are blessed to receive. RMP's proposal does the precise opposite.

I appreciate that there is some expense that comes to RMP as a result of a very small percentage of its users installing rooftop solar, but that small expense can be easily spread among its large customer base which also enjoys the environmental benefit of reduced pollution. Doing so makes sense for all of us. As both State and Federal governments appropriately realize, solar should not be discouraged but incentivized. Regulated utilities like RMP, if they don't incentivize solar which helps everyone, should at the very least not be allowed to disincentivize it with their absurdly low rate proposal.

Of additional concern is that RMP's proposal to so drastically reduce compensation for customer generated electricity suggests that they should be able to determine the value of the solar that I paid to produce while forcing me to pay far more than that number for energy I receive from them. In fairness, how can RMP appropriately contend that a rooftop solar KW is somehow less valuable than a KW I receive from them? I assume their argument is that they have costs to factor into their calculation. If they are going to try to recover their expenses in setting that rate for rooftop solar owners, shouldn't they also have to value a rooftop generated KW by taking into account the investment of that customer and their ability to turn a reasonable profit? If so, surely their proposed number is wildly miscalculated, as the investment could never produce a return at their rate.

Everyone benefits from rooftop solar and the reduction in pollution from that abundant, clean, renewable source. This Commission is empowered to help make sure that those benefits increase instead of being drastically disincentivized by RMP's proposal. Reject RMP's proposal and return to a net metering based system to help create more of a good thing.

Thank you.

Dear Utah Public Service Commission,

Rocky Mountain Power is a for-profit business solely focused on maximizing profits for their shareholders.

As that is their sole mission, you can't blame them for trying to destroy net-metering.

It is important to remember that is the guiding reason for their valuation of the following:

Statewide benefits of solar jobs, income tax, and sales tax  
\$0.00/kWh

Benefits of deferred/avoided equipment purchases, upgrades, service  
\$0.00/kWh

Statewide benefits of reducing pollution, and improving health (hits personally as my son has inversion related asthma issues)  
\$0.00/kWh

If RMP wants to re-value solar, it's time to add in the costs of all that is not accounted for in their current rate of  
\$0.092/kWh.

As a UT resident and RMP customer, I ask the PSC to value the net-metering rate closer to the \$0.20/kWh value it creates.

The application of rocky mountain power to establish export credits the customers generate electricity.

Rocky mountain power is penalizing us who invested in clean energy to take the load off their system & we generate excess electricity that they take from our system & don't pay us a fair price for, but sell to other customers and thus are profiting twice from my electricity - that is NOT fair business practices.  
PLEASE DO NOT ALLOW THEM TO HURT US WHO HAVE SOLAR .  
THANK YOU

To: psc@utah.gov

Solar roof installation also creates jobs and economic output in Utah.

Utility companies should pay people 50-100% for solar electric generation of what they charge them.

That said a few points.

Cost of solar farms is around 1.5- 3 cents per kw. They (rmp) have a reasonable argument for purchasing at the same cost. Prices have dropped 10x in 10 years. Just because homeowners cost is 10x or 100x their cost, isn't their problem.

There's also delivery. Being able to buy closer to where needed, could be a compelling argument for them paying you more as delivery from you to another customer is shorter and cheaper.

Plus you being more resilient should be incentivized not discouraged.

You need to solve this with legislation in Utah congress.

Tesla roofs will likely be a game changer, and they want to squash the economics of it before it catches on.

Dear Commissioners:

I am sending this email in my personal capacity as a residential customer of Rocky Mountain Power (RMP) and not on behalf of my law firm or any client of my law firm. This email is in connection with the above Docket item.

I live at 1380 Chancellor Way (84108); have been a residential customer of RMP for over 25 years; have solar panels on my roof; and am participating in the rebate / credit program that was in effect when my solar panels were installed (approximately 2017).

The most important word in your title is "public." Protecting and enhancing the best interests of the public are central to your mission. This means not only insuring a consistent, reliable and sustainable source of electricity for residential and commercial customers, but doing so in a way that advances public health. Renewable energy, especially solar power, is cost effective, readily available and clean. In considering the value of surplus kilowatts that are provided to the public by residential solar providers, you must factor in the related health benefits. You also must factor in the avoided cost to RMP of providing a like amount of solar power from a utility based solar array, and should heavily discount the associated cost of reliance on non-renewable, polluting sources of alternative power by the known health risks associated with such sources.

The most important thing you can do is encourage, rather than discourage, residential installation of solar systems, which are funded by homeowners. These systems reduce the cost to RMP from installing commercial solar systems, enhance reliability by diversifying the sources of supply, and advance public health. Thus, the credit or rebate for surplus power should be increased, not decreased.

I hope you act accordingly.

Best,

---

Public Service Commission members,

As a Utah resident, I am writing to ask you to reject Rocky Mountain Power's proposed solar export credit rate (Docket No. 17-035-61). I bore the cost of having solar panels installed on my home several years ago, when the rate helped me to justify the cost of doing so.

The role of the PSC is to promote and protect the public interest by ensuring that public utility service is adequate in quality and reliability, and is available to everyone at just and reasonable prices. As you know, the Vote Solar Load Research Study demonstrates the value of customer-generated exports at 22¢/kWh when factoring in environmental and social benefits. Even if you choose to disregard those benefits, the value is still 10.57¢/kWh from utility-based benefits alone. The utility's current export rate of 9.4¢/kWh is surely much closer to "just and reasonable" than the 1.5¢/kWh in this proposal. Furthermore, greater integration of renewable energy protects customers from volatile fuel prices, and protects both customers and the utility from the cost of major infrastructure development that would otherwise be required.

Distributed energy generated through rooftop solar enhances reliability of the electric grid and makes communities more resilient. If the Public Service Commission permits RMP to undervalue community-generated solar energy, it will seriously curb potential community investment in electric grid infrastructure. It is also very much worth considering that at a time of significant job loss due to the coronavirus pandemic, disincentivizing rooftop solar will hurt Utah's economy by diminishing our growing solar industry, which currently employs 7,000 Utahns.

At a time when Utahns are being harmed by poor air quality and increasing wildfires, we need more than ever to expand renewable energy as part of Utah's energy portfolio. Reducing the export credit by 84% would severely disincentivize expansion.

Thank you for considering the voices of Utahns who are affected by your decisions.

Laurie Mecham

Dear Commissioners,

As a Utah resident, I am writing to ask you to reject Rocky Mountain Power's proposed solar export credit rate (Docket No. 17-035-61).

This utility's proposed export credit rate reduction from 9.4¢/kWh to ~ 1.5¢/kWh is nothing more than an attempt by Rocky Mountain Power to misrepresent the value of rooftop solar in order to stifle competition and monopolize renewable power generation. The evidence provided throughout this solar export proceeding has both demonstrated the value of customer-generated exports and shown that Rocky Mountain Power has failed to adequately assess the value of excess solar energy in its proposed rate change.

A better solution than the proposed rate, which, if approved, would be among the most punitive in the nation, is an increased solar export credit rate. The Vote Solar Load Research Study demonstrates the value of customer-generated exports at 22¢ per kilowatt-hour. This value includes 10.57¢/kWh from utility-based benefits alone. Environmental and social benefits add an additional 12/03¢ of benefits.

While it is important to recognize that rooftop solar customers are still very much on the grid, utilizing utility infrastructure, one cannot fairly calculate the cost of this over the many benefits to the grid, customers, and community provided by rooftop solar.

Rooftop solar creates many system-wide benefits enjoyed by all Rocky Mountain Power service area customers and the utility itself. Distributed energy generation from rooftop solar contributes to grid flexibility and resilience and avoids costly transmission upgrades. Additionally, rooftop solar helps create consumer choice and keeps customer dollars local. A punitive export credit rate would take all of these benefits away and would further exclude low-income communities from consumer choice. Rapid implementation of the utility's proposed export credit rate would create a shock for rooftop solar customers and the solar industry. Reducing the export credit by 84% would also jeopardize thousands of local jobs and create additional cost risks for customers through fuel price volatility and major infrastructure development.

Rooftop solar helps to ensure safe, reliable, adequate, and reasonably priced utility service, the guidance by which the Commission is to assess rate proposals. Evidence brought forth throughout this proceeding and by dozens of cases throughout the country confirm that a reduced solar export credit is the inappropriate regulatory response to rooftop solar and will serve to disincentivize the integration of renewable energy into Utah's energy portfolio. Please consider increasing the export credit rate to reflect the real benefits created by rooftop solar.

Sincerely,  
Audrey Marshall

Dear Utah Public Service Commission,

[Your letter here]Solar is so important for the environment and the economy. This is a hinge point and if RMP is allowed to squash solar now, they will and the environment and economy will suffer because of it. YOU CAN MAKE A DIFFERENCE!!!

I hope you will vote favorably for solar.

Sincerely,

Bryson Evans

Dear Utah Public Service Commission,

Utah has clear sunny skies for the vast majority of the year. If we just let this renewable energy just bounce off roofs and blacktops, its a wasted resource. Let's support non-fossil fuel methods of getting energy, diversify the market and help stop Climate Change from getting worse and potentially ending society as we know it.  
DO. SOMETHING.

As a resident of Utah, I am urging you to reject Rocky Mountain Power's proposal to reduce the export credit rate of rooftop solar by up to 85%. The change in value for residential customers from 9.2¢/kWh to 1.5¢/kWh is not supported by sound science, as demonstrated by the vastly different valuations between the Rocky Mountain Power and Vote Solar studies. The rate change would result in drastic job losses for an entire industry, compounding the hardship of the current economic crisis in this state. Additionally, by allowing this change, the Public Service Commission would be condoning Rocky Mountain Power's monopolization of sun power, and cutting off Utahns' right to energy choice.

Our energy grid is rapidly evolving. The future of the grid must include a diversity of resources, including distributed generation which supports greater community resiliency. If the Public Service Commission allows Rocky Mountain Power to undervalue the contributions of rooftop solar, then it is essentially stifling millions of dollars of potential crowd-funded investment in our grid infrastructure. A decision to approve a 1.5¢/kWh rate is a decision to support corporate welfare over the future stability and sustainability of our energy grid.

I implore you to serve the best interest of the people of Utah over the shareholders of Rocky Mountain Power. Reinstate net-metering and afford the people of Utah our right to choose the clean, distributed energy choice we deserve.

Sincerely,

Allison Tuttle

Public Service Commission members,

I want to express my opposition to Rocky Mountain's proposal to reduce solar export credits. Personally, I have had solar on my roof for 10 years and feel like it is my gift to my community and the state. I paid a lot of money to install solar because I believe it is the right thing to do. Even with state and federal tax rebates and net metering, my payback period works out to be about 19 years- I would certainly have gotten a better turn by investing the money. I have had three subsequent expansions of my solar system, but all were done over two years ago, so the proposed reduction in offset credits will not affect me personally. But the uncertainty and proposed changes have already ravaged the solar industry in Utah and if this proposal is adopted, Utah's Solar Industry will be on life support and many more clean energy jobs will be lost.

Solar reduces the amount of pollution and CO2 gases produced and puts power into the grid closer to the end user. Rocky Mountain wants these changes as it will further improve their bottom line while salvaging an industry they do not favor. But Rocky Mountain Power is given a monopoly and is required to provide public benefits in exchange for this perk of exclusivity. In Utah, the solar Industry has employed more workers in recent years than coal has. We should be providing incentive to drive the solar and wind power industries in Utah and let them become clean economic engines of the future.

Consumers should be able to choose to have their own solar system if they want- and should not suffer economically for this choice.

Studies by other parties which are not under the control of Rocky Mountain have indicated that the real value of power produced is much higher than the current 9.2 cents per kilowatt rate. The study by Vote Solar finds a value of 24cents per kilowatt is justified. I think a reasonable compromise is the one kilowatt credit for each excess kilowatt produced.

In conclusion, I want to encourage the Public Service Commission to reinstate the net metering program and help revitalize the solar power industry in Utah and provide incentives for the state to move towards a reliance on clean, renewable energy.
