Can you please explain to me why Rocky mtn power only pays 6 cents for electricity they buy yet they sell it for more than DOUBLE that? I have solar panels and it is outrageous that they can get away with this. They do not pay to maintain my solar panels nor did they pay for the installation of them! With me paying for the production costs they should be paying me the same rate they charge. Why is this not so? and who can I speak to about this?

If I do not receive a timely response and reasonable explanation I will contact state representatives and senators to fix this injustice and with the legislative session just around the corner, I think we should have enough time to come up with new legislation to fix this problem.
