Dear Public Service Commission,

Please note that yet another Utah Resident is pleading with you to reinstate net metering with Rocky Mountain Power. Living here for over 16 years we repeatedly learn about our geographical challenges with our Mountain Ranges creating a "bowl" that traps bad air. This affects our most vulnerable the most: the very young, the very old, and anyone immune compromised. There have even been studies showing that the very small particulates (called PM10) have been found in the uterus of pregnant women. Children's growing lungs are especially susceptible, which could result in life-long challenges. In fact, for the very first time, "air quality" has been listed on the Death Certificate as the cause of death of a young girl in the UK. Poor air quality has real consequences. You can make a difference for Utah.

To help improve our air quality, we need to move away from fossil fuels. The best and easiest way would be to incentivize more Utahans to install solar panels. Not only would this help out economy by creating more jobs, this will improve our air quality.

Please re-instate net metering.

Angie Parkin
84043 Utah County Resident
