

PSC Staff Questions for the June 23, 2017 Schedule 37 Technical Conference

Docket No. 17-035-T07

1. Please explain the difference between the QF queue presented in Appendix 1, p. 2 of 6 of the filing, and the QF queue provided in the fourth quarter 2016 quarterly avoided cost compliance filing for Schedule 38.
2. Please explain why east balancing area solar has a lower capacity contribution value than comparable resources in the west balancing area, e.g., does the time zone difference have any impact? Please also explain the rationale for displacing fixed tilt solar resources with tracking solar resources (see MacNeil Direct Testimony, p. 19, line 359).
