VIA ELECTRONIC FILING

Utah Public Service Commission
Heber M. Wells Building, 4th Floor
160 East 300 South
Salt Lake City, UT 84114

Attention: Gary Widerburg
Commission Secretary

RE: **Docket No. 18-035-01**
Application to Increase the Deferred Rate through the Energy Balancing Account
Mechanism

In accordance with Utah Public Service Commission Rule 746-1-203, Rocky Mountain Power hereby submits for electronic filing its Application to decrease the deferred EBA rate through the Energy Balancing Account mechanism. As requested by the Commission, Rocky Mountain Power is also providing seven (7) printed copies of the filing via overnight delivery. Workpapers supporting this application will also be provided electronically.

The enclosed proposed tariff sheets are associated with Tariff P.S.C.U No. 50 of PacifiCorp, d.b.a. Rocky Mountain Power, applicable to electric service in the State of Utah. Pursuant to the requirement of Rule R746-405-2D, PacifiCorp states that the proposed tariff sheets do not constitute a violation of state law or Commission rule.

Rocky Mountain Power respectfully requests that all formal correspondence and requests for additional information regarding this filing be addressed to the following:

Attorneys for Rocky Mountain Power

BEFORE THE PUBLIC SERVICE COMMISSION OF UTAH

IN THE MATTER OF THE APPLICATION OF)
ROCKY MOUNTAIN POWER TO INCREASE THE) Docket No. 18-035-01
DEFERRED EBA RATE THROUGH THE ENERGY)
BALANCING ACCOUNT MECHANISM)

**APPLICATION TO INCREASE THE DEFERRED EBA RATE THROUGH THE
ENERGY BALANCING ACCOUNT MECHANISM**

Rocky Mountain Power, a division of PacifiCorp (“Company” or “Rocky Mountain Power”), hereby submits this application (“Application”) to the Public Service Commission of Utah (“Commission”) pursuant to energy balancing account mechanism (“EBA”) tariff Schedule 94 (“Tariff Schedule 94”), requesting approval to recover approximately \$2.8 million in deferred EBA Costs (“EBAC”). The \$2.8 million includes the following components: (1) a refund of approximately \$4.4 million, the difference between the Actual EBAC and the Base EBAC in current base rates for the period beginning January 1, 2017 through December 31, 2017 (“Deferral Period”); (2) a credit of approximately \$2.9 million for savings related to the Deer Creek Retiree Medical Obligation; (3) a credit of approximately \$2.8 million related to the settlement of the 2017 EBA, (4) a credit of approximately \$0.1 million in accrued interest; (5) approximately \$4.0 million in costs related to an adjustment for sales made to a special contract customer; (6) a credit of approximately \$0.5 million related to an adjustment arising from a non-generation agreement with

a special contract customer; (7) approximately \$9.1 million in costs representing the Utah-allocated Deer Creek mine amortization expense; (8) approximately \$0.3 million in costs related to the Utah Subscriber Solar program; and (9) approximately \$0.1 million in costs related to an adjustment arising from a settlement agreement with a special contract customer.

The Company has included revised Tariff Schedule 94 to recover from customers \$2.8 million. This results in an overall increase to retail customers of the Tariff Schedule 94 rate of approximately 0.1 percent. Alternatively, the Company is proposing a change in the accounting treatment for recovery of the Deer Creek mine amortization expense to continue providing the Company recovery of the already-approved expense but without an increase in customer rates. Specifically, the Company proposes to offset the Deer Creek mine amortization expense for 2017 against the regulatory liability established in Docket No. 17-035-69, Investigation of Revenue Requirement Impacts of the New Federal Tax Legislation Titled: “An act to provide for reconciliation pursuant to titles II and V of the concurrent resolution of the budget for fiscal year 2018”. This alternative treatment would result in a refund in the 2018 EBA of \$6.5 million, or 0.3 percent.

This Application is consistent with Tariff Schedule 94, approved by the Commission (1) on July 17, 2012, as amended by the Commission’s Order on EBA Interim Rate Process, issued August 30, 2012, and (2) in Dockets No. 16-035-T05 and No. 09-035-15 by orders issued May 16, 2016 and February 16, 2017, respectively (together, the “EBA Order”).

The proposed EBA rate increase reflected in this Application represents an EBA rate adjustment under Tariff Schedule 94 as set forth above. It is allocated to rate schedules pursuant to and consistent with the Commission-approved net power cost (“NPC”) allocator from the Company’s general rate case filing in Docket No. 13-035-184 (the “2014 GRC”), as explained

further below. Rocky Mountain Power respectfully requests that, pursuant to the provisions in Tariff Schedule 94 and the EBA Order, the Commission authorize recovery of the amounts in this Application, with a change in Utah rates to become effective, on an interim basis, May 1, 2018. In support of its Application, Rocky Mountain Power states as follows:

1. Rocky Mountain Power is a division of PacifiCorp, an Oregon corporation, which provides electric service to retail customers through its Rocky Mountain Power division in the states of Utah, Wyoming, and Idaho, and through its Pacific Power division in the states of Oregon, California, and Washington.

2. Rocky Mountain Power is a public utility in the state of Utah and is subject to the Commission's jurisdiction with respect to its prices and terms of electric service to retail customers in Utah. Rocky Mountain Power's principal place of business in Utah is 1407 West North Temple, Suite 310, Salt Lake City, Utah, 84116.

3. Communications regarding this filing should be addressed to:

Jana Saba
Utah Regulatory Affairs Manager
Rocky Mountain Power

E-mail: yvonne.hogle@pacificorp.com

In addition, Rocky Mountain Power requests that all data requests regarding this application be sent in Microsoft Word or plain text format to the following:

By email (preferred): datarequest@pacificorp.com

By regular mail: Data Request Response Center
 PacifiCorp
 825 NE Multnomah, Suite 2000
 Portland, Oregon 97232

Informal questions may be directed to Jana Saba, Utah Regulatory Affairs Manager, at (801) 220-2823.

4. Tariff Schedule 94 permits the Company to monitor total EBAC on an unbundled basis apart from other investments and expenses included in base rates and to account for historical actual EBAC that may be over or under the amount recovered in base rates through the EBA.

5. Under Tariff Schedule 94, the Company files a deferred EBAC adjustment application annually on or before March 15. Included with this filing are changes to Tariff Schedule 94 to include provision for an annual interim rate effective date of May 1.

6. The EBA deferral calculation consists of two revenue requirement components: NPC and wheeling revenue. NPC are defined as the sum of fuel expenses, wholesale purchased power expenses, wheeling expenses, less wholesale sales revenue. Wheeling revenue includes amounts booked to FERC account 456.1, Revenues from transmission of electricity of others. Collectively, the two components are known in Tariff Schedule 94 as “Energy Balancing Account Costs” or “EBAC”.

7. During 2017, several new accounts were used in the Company’s accounting system to track components of NPC and wheeling revenues, including new accounts to track fuel expenses and NPC-related accounting entries arising from the Company’s participation in the energy imbalance market (“EIM”) with the California Independent System Operator (“CAISO”), as specifically described in the direct testimony of Mr. Michael G. Wilding. The new accounts fall within the main FERC accounts that make up net power costs, but the specific SAP accounts are not identified in the currently-effective Tariff Schedule 94. The new accounts are identified in an

exhibit to Mr. Wilding's direct testimony as well as in the revisions to Schedule 94, included as an exhibit in Mr. Robert M. Meredith's direct testimony.

8. The deferred EBAC is determined pursuant to Tariff Schedule 94 by comparing, in a deferral period, the actual NPC and wheeling revenue to the total base EBAC recovered in rates as established in a general rate case. From January 2017 through December 31, 2017, 100 percent was deferred for later recovery from or refund to customers. In addition, several adjustments were made to actual NPC this year, as described in the direct testimony of Mr. Wilding.

9. The Deferral Period for this Application is the 12-month period beginning January 1, 2017 through December 31, 2017.

10. The request in this Application includes nine components: (1) the EBA deferral amount ("EBA Deferral Amount") of a refund of approximately \$4.4 million; (2) a credit of approximately \$2.9 million for savings related to the Deer Creek Retiree Medical Obligation; (3) a credit of approximately \$2.8 million related to the settlement of the 2017 Energy Balancing Account; (4) a credit of approximately \$0.1 million in accrued interest; (5) approximately \$4.0 million in costs related to an adjustment for sales made to a special contract customer; (6) a credit of approximately \$0.5 million related to an adjustment arising from a non-generation agreement with a special contract customer; (7) approximately \$9.1 million in costs representing the Utah-allocated Deer Creek mine amortization expense; (8) approximately \$0.3 million in costs related to the Utah Subscriber Solar program; and (9) approximately \$0.1 million in costs related to an adjustment for a settlement agreement with a special contract customer.

11. For the Deferral Period, base NPC were set at \$1.491 billion ("Base NPC") and wheeling revenue was set at \$97 million.

12. Actual NPC were higher than Base NPC during the Deferral Period as a result of, among other things, a reduction in wholesale sales revenue and an increase in purchased power expense, partially offset by a reduction in coal, natural gas and wheeling expenses, among other expenses.

13. The Company calculated the EBA Deferral Amount for the Deferral Period using the Commission Order Method consistent with the stipulation approved by the Commission in the 2014 GRC, as set forth in detail in Exhibit RMP____(MGW-1), attached to Mr. Wilding's direct testimony.

Deferred EBA Cost Adjustment

14. Pursuant to Tariff Schedule 94, the deferred EBAC adjustment is calculated monthly and recorded as a deferred expense on the Company's books. Mr. Wilding's **Exhibit RMP____(MGW-1)** shows the detailed calculation of the EBA Deferral Amount. Adjusted Actual Total NPC from January 1, 2017 through December 31, 2017 were approximately \$1,522 million, compared to the \$1,491 million Base NPC being used in this case.

15. Utah's allocated NPC before wheeling revenues were approximately \$657 million. After crediting Utah-allocated wheeling revenues of approximately \$50 million, Utah actual EBAC were approximately \$607 million shown on line 3, or \$25.09 per megawatt-hour ("MWh"), shown on line 5.

16. In comparison, Utah Base EBAC were approximately \$587 million shown on line 8, after crediting Utah-allocated wheeling revenues of approximately \$41 million shown on line 7, or \$25.25 per MWh, shown on line 10. The monthly difference between lines 5 and 10 applied to Utah's 2017 load produces the deferred EBAC of a credit of approximately \$4.4 million, shown on line 12.

17. The Retiree Medical Obligations savings related to the closure of the Deer Creek mine in the amount of approximately \$2.9 million are shown on line 13. An adjustment for sales to a special contract customer of approximately \$4.0 million, subject to a deadband, is shown on line 16. An adjustment related to a non-generation agreement with a special contract customer of a credit of approximately \$464 thousand is shown on line 17. An adjustment related to the Utah Subscriber Solar program of approximately \$258 thousand is shown on line 18. An adjustment of a credit of \$2.8 million related to the 2017 EBA settlement is shown on line 23. A credit for interest of approximately \$181 thousand for the Deferral Period (January 1, 2017 through December 31, 2017) is shown on line 24 and expense for interest of approximately \$54 thousand (from January 2018 through April 2018) is shown on lines 27 and 29. An adjustment arising from a settlement agreement with a special contract customer of approximately \$148 thousand is shown on line 28. The Deer Creek amortization expense of approximately \$9.1 million is reflected on line 26. The total ending deferral amount of approximately \$2.8 million is shown on line 30.

18. A summary of the total requested EBA recovery is shown in the table below.

| Calendar Year 2017 EBA Deferral | | <i>Exhibit RMP__ (MGW-1) Reference</i> |
|---|-----------------------|--|
| Actual EBAC (\$/MWh) | \$ 25.09 | <i>Line 5</i> |
| Base EBAC (\$/MWh) | 25.25 | <i>Line 10</i> |
| \$/MWh Differential | \$ (0.16) | |
| Utah Sales (MWh) | 24,213,222 | <i>Line 4</i> |
| EBA Deferrable* | \$ (4,435,015) | <i>Line 12</i> |
| Incremental Non-Fuel FAS 106 Savings* | (2,906,573) | <i>Line 13</i> |
| Special Contract Customer Adjustment Subject to Deadband* | 4,033,736 | <i>Line 16</i> |
| Adjustment for Non-Generation Agreement* | (463,556) | <i>Line 17</i> |
| Adjustment for Subscriber Solar Program* | 257,691 | <i>Line 18</i> |
| Total Deferrable | \$ (3,513,717) | <i>Line 19</i> |

| Requested EBA Recovery | \$ 2,766,676 | <i>Line 30</i> |

* Calculated monthly

Proposed Tariff Sheets

19. The Company's proposal is to spread the deferred EBAC across customer classes for the Deferral Amounts consistent with the NPC Allocator agreed to by the parties and approved by the Commission in the 2014 GRC, as shown in Exhibit RMP___(RMM-1), attached to the direct testimony of Mr. Meredith.

20. The Company proposes to allocate the 2018 EBA deferral and revenues to those customer classes that are not reflected in the NPC Allocators, such as Schedule 21 and Schedule 31 customers, as described in Mr. Meredith's direct testimony.

21. The table below summarizes the proposed price changes by tariff rate schedule. Mr. Meredith's **Exhibit RMP___(RMM-1)** displays the Company's proposed rate spread, as discussed above. The proposal would result in an overall increase of approximately 0.1 percent to customers in Utah. Mr. Meredith's **Exhibit RMP___(RMM-2)** includes billing determinants and the calculations of the proposed EBA rates in this case. **Exhibit RMP___(RMM-3)** and **Exhibit RMP___(RMM-4)** show what net impact, rate spread and prices by rate schedule would be if the proposed alternative proposal for a change in the recovery treatment for Deer Creek Mine amortization costs is approved. **Exhibit RMP___(RMM-5)** contains a proposed EBA price comparison by rate schedule with and without the Deer Creek Mine amortization costs. As described in Mr. Meredith's **Exhibit RMP___(RMM-6)** contains the proposed rates and revisions for Tariff Schedule 94.

| Customer Class | Proposed Percentage Change 2018 EBA | Alternative Rate Proposal Proposed Percentage Change |
|--|--|---|
| Residential | | |
| Schedules 1, 2, 3 | 0.1% | (0.3)% |
| General Service | | |
| Schedule 23 | 0.1% | (0.32)% |
| Schedule 6 | 0.2% | (0.4)% |
| Schedule 8 | 0.2% | (0.43)% |
| Schedule 9 | 0.2% | (0.52)% |
| Irrigation | | |
| Schedule 10 | 0.2% | (0.38)% |
| Public Street and Area Lighting Schedules | | |
| Schedules 7, 11, 12 | 0.1% | (0.2)% |
| Schedule 15 | 0.1% | (0.4)% |

WHEREFORE, Rocky Mountain Power respectfully requests that the Commission approve interim rates as provided in Tariff Schedule 94 to recover the costs identified in this Application, as filed, with an effective date of May 1, 2018.

DATED this 15th day of March 2018.

Respectfully submitted,

ROCKY MOUNTAIN POWER

R. Jeff Richards

Attorneys for Rocky Mountain Power

Rocky Mountain Power
Docket No. 18-035-01
Witness: Michael G. Wilding

BEFORE THE PUBLIC SERVICE COMMISSION
OF THE STATE OF UTAH

ROCKY MOUNTAIN POWER

Direct Testimony of Michael G. Wilding

March 2018

1 **Q. Please state your name, business address and present position with PacifiCorp,**
2 **dba Rocky Mountain Power (“the Company”).**

3 A. My name is Michael G. Wilding. My business address is 825 NE Multnomah Street,
4 Suite 600, Portland, Oregon 97232. My title is Director, Net Power Costs and
5 Regulatory Strategy.

6 **QUALIFICATIONS**

7 **Q. Briefly describe your education and business experience.**

8 A. I received a Master of Accounting from Weber State University and a Bachelor of
9 Science degree in accounting from Utah State University. I am a Certified Public
10 Accountant licensed in the state of Utah. Prior to joining the Company, I was employed
11 as an internal auditor for Intermountain Healthcare and an auditor for the Utah State
12 Tax Commission. I have been employed by the Company since February 2014.

13 **Q. Have you testified in previous regulatory proceedings?**

14 A. Yes. I have filed testimony in proceedings before the public service commissions in
15 Utah, Wyoming, Idaho, Oregon, Washington, and California.

16 **PURPOSE OF TESTIMONY**

17 **Q. What is the purpose of your testimony in this proceeding?**

18 A. My testimony presents and supports the Company’s calculation of the Energy
19 Balancing Account (“EBA”) deferral for the 12-month period from January 1, 2017
20 through December 31, 2017 (“Deferral Period”). More specifically, I provide the
21 following:

- 22 • Details supporting the calculation of the Company’s request to recover
23 \$2.8 million (0.1 percent increase) for excess EBA-related costs, including

24 interest, the Utah-allocated non-fuel saving related to the settlement of the Deer
25 Creek Retiree Medical Obligation, the Utah-allocated Deer Creek amortization
26 expense, an adjustment for sales made to a special contract customer, an
27 adjustment related to a Utah Subscriber Solar resource, settlement of the 2017
28 EBA, and a settlement with a special contract customer;

- 29 • An alternative rate proposal to mitigate future rate impacts for customers by
30 removing the Deer Creek amortization expense from the EBA with recovery of
31 it as an offset to the deferral of the Tax Cuts and Jobs Act impacts in Docket
32 17-035-69. The result of this alternative rate proposal would be a decrease in
33 the EBA of \$6.5 million (0.3 percent);
- 34 • A discussion of the main differences between adjusted actual net power costs
35 (“Actual NPC”) and net power costs in rates (“Base NPC”); and,
- 36 • A discussion of the Company’s participation in the energy imbalance market
37 (“EIM”) with California Independent System Operator (“CAISO”) and the
38 benefits passed through to customers.

39 EBA SUMMARY

40 **Q. Please summarize the Company’s EBA application.**

41 A. The Company’s application requests recovery of \$2.8 million, comprised of a
42 \$4.4 million refund of EBA-related costs, a credit of \$2.9 million for savings for the
43 Retiree Medical Obligation, \$4.0 million for sales made to a special contract customer,
44 a credit of \$0.5 million for a non-generation agreement with a special contract
45 customer, \$0.3 million for costs related to the Utah Subscriber Solar Program, a credit
46 of \$2.8 million for the settlement of the 2017 EBA, \$9.1 million cost for the Utah-

47 allocated Deer Creek mine amortization expense, \$0.1 million cost for a settlement with
48 a special contract customer, and a \$0.1 million credit of interest.

49 **Q. Are there any changes to the EBA calculation?**

50 A. Yes. Adjustments have been included as part of the EBA calculation for the following
51 items:

- 52 • A non-generation agreement made to a special contract customer during the
53 month of December 2017;
- 54 • The Utah Subscriber Solar resource;
- 55 • The 2017 EBA Settlement per the order in Docket No. 17-035-01; and
- 56 • A settlement with a special contract customer per Docket No. 17-035-54.

57 **EBA DEFERRAL CALCULATION**

58 **Q. Please describe the Company's calculation of the EBA deferral for the Deferral**
59 **Period.**

60 A. Table 1 below provides a summary of the total EBA deferral and a breakdown of the
61 individual components of the EBA. Additionally, Exhibit RMP____(MGW-1) presents
62 the detailed calculation of the EBA deferral on a monthly basis.

Table 1
Annual EBA Calculation

| <u>Calendar Year 2017 EBA Deferral</u> | | <i>Exhibit RMP (MGW-1)</i> |
|---|-----------------------|----------------------------|
| | | <i>Reference</i> |
| Actual EBAC (\$/MWh) | \$ 25.09 | <i>Line 5</i> |
| Base EBAC (\$/MWh) | 25.25 | <i>Line 10</i> |
| \$/MWh Differential | <u>\$ (0.16)</u> | |
| | | |
| Utah Sales (MWh) | 24,213,222 | <i>Line 4</i> |
| | | |
| EBA Deferrable* | \$ (4,435,015) | <i>Line 12</i> |
| Incremental Non-Fuel FAS 106 Savings* | (2,906,573) | <i>Line 13</i> |
| Special Contract Customer Adjustment Subject to Deadband* | 4,033,736 | <i>Line 16</i> |
| Adjustment for Non-Generation Agreement* | (463,556) | <i>Line 17</i> |
| Adjustment for Subscriber Solar Program* | 257,691 | <i>Line 18</i> |
| Total Deferrable | <u>\$ (3,513,717)</u> | <i>Line 19</i> |
| | | |
| 2017 EBA Settlement | \$ (2,800,000) | <i>Line 23</i> |
| Deer Creek Amortization Costs | 9,059,510 | <i>Line 26</i> |
| Special Contract Customer Settlement | 147,930 | <i>Line 28</i> |
| | | |
| Interest Accrued through December 31, 2017 | \$ (180,959) | <i>Line 24</i> |
| Interest Jan. 1, 2018 through April 30, 2018 | 53,913 | <i>Line 27, 29</i> |
| Requested EBA Recovery | <u>\$ 2,766,676</u> | <i>Line 30</i> |
| | | |
| <small>* Calculated monthly</small> | | |

64 The EBA deferral credit of \$4.4 million is calculated as the difference between
65 the Actual NPC and wheeling revenue and the Base NPC and wheeling revenue, as
66 established in the 2014 general rate case (“GRC”). The calculation of the monthly
67 amount debited or credited into the EBA Deferral Account is based on the following
68 formula:

69 *EBA Deferral* $Utah,month =$

$$\left[\left(\frac{Actual\ EBAC_{Utah,month}}{MWh} - \frac{Base\ EBAC_{Utah,month}}{MWh} \right) \times Actual\ MWh_{Utah,month} \right]$$

70 **Q. What revenue requirement components are included in the EBA deferral**
71 **calculation?**

72 A. The EBA deferral calculation consists of two revenue requirement components, NPC
73 and wheeling revenue. NPC are defined as the sum of fuel expenses, wholesale
74 purchase power expenses, and wheeling expenses, less wholesale sales revenue.

75 Wheeling revenue includes amounts booked to FERC account 456.1, revenues from
76 transmission of electricity of others. Collectively these two components are known in
77 the Company's EBA tariff, Schedule No. 94, as Energy Balancing Account Costs
78 ("EBAC").

79 Per the stipulation in Docket No. 14-035-147 ("Deer Creek Settlement"), the
80 EBA includes 100 percent of the Utah-allocated amortization expense associated with
81 the closure of the Deer Creek mine. The Deer Creek amortization expense will continue
82 to be part of the EBA through the 2019 EBA or until a different regulatory treatment is
83 approved. The EBA also includes the non-fuel cost savings related to the settlement of
84 Energy West retiree medical benefit obligation as a result of the Deer Creek mine
85 closure.

86 **Q. How are the Utah-allocated Actual NPC calculated?**

87 A. Utah-allocated Actual NPC are calculated in three steps. First, unadjusted actual NPC
88 are established on a total-company basis. Second, adjustments are made to the
89 unadjusted actual NPC to apply certain regulatory adjustments and to remove out-of-
90 period accounting entries. Third, the adjusted total-company Actual NPC are allocated
91 to Utah on the basis of the 2017 Protocol.

92 **Q. What were the total-company adjusted Actual NPC for the Deferral Period and
93 how were they determined?**

94 A. The total-company adjusted Actual NPC in the Deferral Period were approximately
95 \$1.522 billion. This amount captures all components of NPC as defined in the
96 Company's GRC proceedings and modeled by the Company's Generation and
97 Regulation Initiative Decision Tool ("GRID") model. Specifically, it includes amounts

98 booked to the following FERC accounts:

- 99 • Account 447 - Sales for resale, excluding on-system wholesale sales and other
100 revenues that are not modeled in GRID
- 101 • Account 501 - Fuel, steam generation; excluding fuel handling, start-up fuel¹
102 (gas and diesel fuel, residual disposal) and other costs that are not modeled in
103 GRID
- 104 • Account 503 - Steam from other sources
- 105 • Account 547 - Fuel, other generation
- 106 • Account 555 - Purchased power, excluding the Bonneville Power
107 Administration (“BPA”) residential exchange credit pass-through if applicable
- 108 • Account 565 - Transmission of electricity by others

109 During 2017, several new SAP accounts were used in the Company’s accounting
110 system to track components of NPC and wheeling revenue. Specifically, new SAP
111 accounts were established to track NPC-related accounting entries arising from
112 participation in the EIM with the CAISO, the Utah Subscriber Solar resource, and new
113 revenue accounts. These accounts fall within the main FERC accounts that make up
114 the EBAC, but the specific SAP accounts are not identified in the current Schedule
115 No. 94. Exhibit RMP___(MGW-2) identifies the new accounts used in 2017. The new
116 accounts are also included in the revised tariff sheets provided in the testimony of Mr.
117 Robert M. Meredith.

¹ Start-up fuel is accounted for separately from the primary fuel for steam power generation plants. Start-up costs are not accounted for separately for natural gas plants, and therefore all fuel for natural gas plants is included in the determination of both Base NPC and Actual NPC.

118 **Q. What adjustments are made to Actual NPC and why are they needed?**

119 A. The Company adjusts Actual NPC to reflect the ratemaking treatment of several items,
120 including the buy-through of economic curtailment by interruptible industrial
121 customers, situs assignment of the generation from Oregon solar resources procured to
122 satisfy ORS 757.370 solar capacity standard, situs assignment of generation from a
123 Utah Subscriber Solar resource, revenue associated with a unique contract for the
124 Company's Leaning Juniper facility, coal inventory adjustments to reflect coal costs in
125 the correct period, legal fees related to fines and citations included in the cost of coal,
126 and the removal of liquidated damage fees per a coal supply agreement that relate to
127 2018 but were booked in 2017 in accordance with generally accepted accounting
128 principles. The Company also adjusts Actual NPC to remove accounting entries booked
129 in the Deferral Period that related to operations prior to implementation of the EBA in
130 October 2011, however there were no such accounting entries during the Deferral
131 Period. Additional details regarding each of these adjustments and the impact on NPC
132 are provided in Additional Filing Requirement 15.

133 **Q. What allocation methodology did the Company use to calculate the EBA Deferral**
134 **Account balance?**

135 A. The settlement stipulation in the 2014 GRC set the Base NPC effective September 1,
136 2014 using the Commission Order Method which was originally approved by the
137 Commission in Docket No. 09-035-15. The Base NPC and Commission Order Method
138 were detailed in Exhibit A of the stipulation in the 2014 GRC. Attached Exhibit
139 RMP___(MGW-1) calculates the EBA deferral using the Commission Order Method
140 for the entire Deferral Period.

141 **Q. Has the Company calculated the EBA deferral using any other allocation**
142 **methods?**

143 A. No. Consistent with the stipulation in the 2014 GRC, beginning September 2014 only
144 the Commission Order Method is used.

145 **Q. Does the calculation of the EBA deferral include carrying charges?**

146 A. Yes. In accordance with the Commission's orders dated March 2, 2011 and
147 February 16, 2017 in Docket No. 09-035-15, carrying charges accrue on the monthly
148 EBA deferral at an annual rate of six percent. Carrying charges accrue monthly during
149 the Deferral Period, the review period, and will continue to accumulate during the
150 collection period.

151 **Q. Please describe the impact of the special contract customer in the EBA.**

152 A. The special contract customer pays rates specified in the contract and is not subject to
153 new EBA rates approved on or after December 1, 2016. The NPC associated with
154 serving the special contract customer are embedded in Actual NPC. As Utah tariff
155 customers benefit from the special contract remaining on the Company's system and
156 paying a portion of the total revenue requirement, the EBA deferral amount associated
157 with the special contract customer is shared among Utah tariff customers. Additionally,
158 a certain portion of the sales to the special contract customer are at a price different
159 than NPC in base rates, and an adjustment is made to the EBA in which the Utah tariff
160 customers share the variance between the contract price and Base NPC with the
161 Company.

162 **Q. Please describe the adjustment for sales made to a special contract customer.**

163 A. Per the stipulation in Docket No. 16-035-33, the EBA includes an adjustment for certain

164 sales made to the special contract customer. The adjustment calculates monthly the
165 difference between the average monthly contract price paid and NPC in base rates
166 (“Special Contract Differential”). The Special Contract Differential is then multiplied
167 by the megawatt-hour (“MWh”) sales to the special contract customer to calculate the
168 dollar amount of the variance. The difference is then subject to a symmetrical deadband
169 of \$350,000. For the 2018 EBA, the adjustment for sales made to a special contract
170 customer was \$4.0 million.

171 **Q. Please describe the EBA impact of the adjustment for a non-generation agreement**
172 **with a special contract customer.**

173 A. The Company executed a non-generation agreement with a special contract customer
174 under a provision of its Energy Services Agreement for the period December 12, 2017
175 through December 31, 2017. Under the agreement, in exchange for the special contract
176 customer not operating one of its self-generation units, the Company provided energy
177 for a fixed energy price applicable to the load that would have been self-generated.
178 Pursuant to discussions with the Division of Public Utilities and the Office of Consumer
179 Services, an adjustment is made to the EBA in which the Utah tariff customers receive
180 the NPC benefit of the non-generation agreement. Due to the time sensitive nature of
181 the non-generation agreement, a formal agreement between parties has not yet been
182 filed with the Commission, but parties are planning to file one soon.

183 **Q. Please describe the adjustment for the non-generation agreement made to a**
184 **special contract customer.**

185 A. The adjustment is the difference between the fixed energy price agreed upon between
186 the Company and the customer and NPC in base rates (“Rate Differential”). The Rate

187 Differential is multiplied by the MWh non-generation sales to the special contract
188 customer to calculate the dollar amount of the variance, which is then credited back to
189 customers. For the 2018 EBA, there is a credit to customers of approximately
190 \$0.5 million.

191 **Q. Please describe the Utah Subscriber Solar Program.**

192 A. The Commission approved the “Subscriber Solar Program Rider - Optional” Tariff
193 Schedule 73, effective March 28, 2016, which enables participating Utah customers to
194 purchase electricity from a specific utility-scale solar resource. Customers can elect to
195 purchase blocks of energy at a set amount each month, and the value of any excess,
196 unused block energy is rolled forward to future months. Participating blocks of energy
197 purchased are subject to rates specific to Schedule 73 and are not subject to EBA
198 adjustment rate schedule changes (Schedule 73, Special Condition 15).

199 **Q. Please describe the adjustment to the EBA for the Utah Subscriber Solar Program**
200 **Resource.**

201 A. Under the stipulation in Docket No. 15-035-61, the solar resource will be included as
202 a Utah-situs resource in net power costs.² The generation costs of the solar resource are
203 compared to the generation charges paid by solar subscriber customers and the
204 difference is either recovered from or credited back to Utah customers through the
205 EBA. In addition, there will be no load adjustments and no change in allocation factors
206 due to the program. The EBA adjustment for subscriber solar costs is approximately
207 \$0.3 million.

² Order approving amended settlement agreement, Docket No. 15-035-61, issued October 21, 2015, Page 7 of the amended settlement stipulation.

208 **Q. Please describe the adjustment related to the settlement with a special contract**
209 **customer.**

210 A. Under the Settlement Stipulation in Docket No. 17-035-54, filed with the Commission
211 February 6, 2018, the Company will collect a remaining balance of \$147,930 from
212 customers related to 2015 EBA recovery charges. This amount is included in the 2018
213 EBA.

214 **Q. Please describe the adjustment related to the 2017 EBA Settlement.**

215 A. Under the Settlement Stipulation in Docket 17-035-01, filed February 7, 2018, the 2017
216 EBA settlement amount of \$2.8 million will be carried forward and will be offset
217 against the Company's request in the 2018 EBA filing. A credit of \$2.8 million has been
218 included in the 2018 EBA.

219 **ALTERNATIVE RATE PROPOSAL**

220 **Q. Please explain the Company's alternative rate proposal.**

221 A. In accordance with the motion for deferred accounting treatment orders in Docket No.
222 17-035-69, the Company is deferring as a regulatory liability all revenue requirement
223 impacts of the Tax Cuts and Jobs Act, which became effective January 1, 2018, and
224 will continue until otherwise ordered by the Commission. The Company's alternative
225 rate proposal is to remove the amortization of the Deer Creek mine regulatory asset
226 from the EBA and use the regulatory liability created by federal tax reform to offset it.
227 Currently the Company includes \$9.1 million of the Utah-allocated balance of the Deer
228 Creek mine regulatory asset in the EBA as amortization and will continue until the
229 balance is fully amortized, which will be at the conclusion of the 2019 EBA.

230 **Q. What is the impact of the Company's alternative proposal?**

231 A. The alternative proposal would change the 2018 EBA to a \$6.5 million credit to
232 customers (0.3 percent decrease) compared to a \$2.8 million surcharge (0.1 percent
233 increase). The alternative proposal would provide customers with a rate reduction now
234 and net the impacts of Deer Creek mine amortization with the regulatory liability
235 established for revenue requirement impacts of recent tax legislation. Similarly, the
236 Company is proposing recovery of the Deer Creek mine amortization as an offset to
237 the regulatory liability due to federal tax reform in its application to be filed March 16,
238 2018 in Docket No. 17-035-69.

239 **DEFERRAL PERIOD RESULTS**

240 **Q. Please describe the Base EBAC the Company used to calculate the amount to be**
241 **deferred during the Deferral Period.**

242 A. The Base EBAC for the 2018 EBA was set in the 2014 GRC and became effective
243 September 1, 2015. Base NPC used a test period of 12 months from July 2014 through
244 June 2015 and set total-company Base NPC at \$1.491 billion and wheeling revenue at
245 \$97 million.

246 **Q. Please describe Table 2 and the line items making up the difference between Actual**
247 **NPC and Base NPC.**

248 A. Table 2 displays the Base NPC approved by the Commission for the Deferral Period.
249 The remainder of Table 2 is a breakout of the difference between Actual NPC and Base
250 NPC, by cost category, on a total-company basis. The differences by category in Table
251 2 result from comparing Actual NPC to the Base NPC effective during the Deferral
252 Period.

Table 2

Total Company Net Power Cost Reconciliation (\$millions)

| | TOTAL |
|-------------------------------------|-----------------|
| Utah Base NPC | \$ 1,491 |
| Increase/(Decrease) to NPC: | |
| Wholesale Sales Revenue | 183 |
| Purchased Power Expense | 4 |
| Coal Fuel Expense | (80) |
| Natural Gas Expense | (63) |
| Wheeling and Other Expense | (17) |
| Total Increase/(Decrease) | 27 |
| 2014 GRC Settlement Adjustment | 3 |
| Total Company NPC Difference | 31 |
| Adjusted Actual NPC | \$ 1,522 |

254

DIFFERENCES IN NPC

255 **Q. Please describe the primary differences between Actual NPC and Base NPC.**

256 A. From an accounting perspective, and as shown in Table 2, Actual NPC were higher than
 257 Base NPC due to a \$183 million reduction in wholesale sales and an increase in
 258 purchased power expense. The reduced wholesale sales were partially offset by an
 259 \$80 million reduction in coal fuel expense, \$63 million reduction in natural gas
 260 expense, and a \$17 million reduction in wheeling and other expenses. Notably, hydro
 261 generation, a zero fuel-cost resource, was higher than Base NPC by 20 percent.

262 **Q. Please explain why the Company has higher Actual NPC than Base NPC but the
 263 EBA Deferrable is a refund of \$4.4 million to customers.**

264 A. The EBA deferral balance is the difference between Actual EBAC and Base EBAC,
 265 which includes wheeling revenues. Actual Utah-allocated wheeling revenues increased
 266 approximately \$9.1 million compared to Utah-allocated base wheeling revenues. In
 267 addition, the EBA is calculated on a dollar-per MWh basis and Utah jurisdictional sales

268 also increased more than 1,000 gigawatt-hour (“GWh”) over the base Utah
269 jurisdictional sales. Therefore, on a dollar per MWh basis, actual EBAC was, on
270 average, \$0.16/MWh less than base EBAC (Exhibit 1, Line 10).

271 **Q. Please explain what contributed to the reduction in wholesale sales revenue.**

272 A. The decline in wholesale sales revenues relative to Base NPC was a combination of a
273 reduction in the wholesale sales volumes of market transactions (represented in GRID
274 as short-term firm and system balancing sales), lower market prices, and expired
275 contracts.

276 Revenue from market transactions is approximately \$142 million lower than
277 Base NPC due to lower market prices and lower volume of market sales transactions.
278 The average price of actual market sales transactions was \$10.05/MWh, or 26 percent,
279 lower than the average price in Base NPC. Actual wholesale market volumes were
280 1,997 GWh, or 24 percent, lower than the Base NPC.

281 **Q. Please explain the increase in purchased power expenses.**

282 A. Purchased power expense increased by \$123.3 million largely due to 15 new large
283 qualifying facility contracts that were not included in Base NPC, a purchase power
284 agreement (“PPA”) with Utah Associated Municipal Power Systems (“UAMPS”) that
285 the Company acquired with its addition of Eagle Mountain, Utah into its service
286 territory, and a tolling agreement with the West Valley natural gas peaker plant. The
287 increase was partially offset by the expiration of the Hermiston PPA and the Georgia-
288 Pacific Camas contract, which resulted in lower purchased power costs of \$91.3
289 million.

290 Expenses from market transactions (represented in GRID as short-term firm and

291 system balancing purchases) increased by \$28 million compared to Base NPC. Actual
292 market purchases were 1,261 GWh (25 percent) higher than Base NPC and the average
293 price of actual market purchases transactions was \$1.72/MWh (six percent) lower than
294 Base NPC.

295 **Q. Please explain the decrease in wheeling expenses.**

296 A. Actual long-term wheeling contracts decreased by approximately \$14 million when
297 compared to Base NPC mainly due to expired wheeling contracts. This was partially
298 offset by an increase of \$2.3 million of short-term wheeling expenses.

299 **Q. Please discuss the changes in coal fuel expense.**

300 A. The main driver in the decrease of coal fuel expense is that coal generation volume
301 decreased 5,276 GWh (12 percent) compared to Base NPC. The average cost of coal
302 generation slightly increased from \$19.77/MWh in Base NPC to \$20.42/MWh in the
303 Deferral Period, but was offset by the lower generation resulting in an overall decrease
304 of \$80.1 million in coal fuel expense.

305 **Q. Please describe the changes in natural gas fuel expense.**

306 A. The total natural gas fuel expense in Actual NPC decreased by \$63 million compared
307 to Base NPC. The main driver of the reduction is the average cost of natural gas
308 generation decreased from \$39.73/MWh in Base NPC to \$29.07/MWh (27 percent) in
309 the Deferral Period. Reduced costs were partially offset by an increase in natural gas
310 generation volume of 419 GWh (6 percent) above Base NPC during the Deferral
311 Period.

IMPACT OF PARTICIPATING IN THE EIM

312

313 **Q. Are the actual benefits from participating in the EIM with CAISO included in the**
314 **EBA deferral?**

315 A. Yes. Participation in the EIM provides benefits to customers in the form of reduced
316 Actual NPC. Financially binding EIM operation went live November 1, 2014, and all
317 net benefits arising from EIM operation from January 1, 2017 to December 31, 2017
318 are included in the 2018 EBA deferral.

319 **Q. Has the Company quantified the benefits realized during 2017 from participating**
320 **in the EIM?**

321 A. Yes, the Company has calculated the EIM inter-regional benefit, *i.e.*, the margin
322 realized on EIM imports and exports. The Company's EIM inter-regional benefit for
323 the deferral period was approximately \$25.7 million.

324 **Q. How does the Company calculate its actual EIM benefits?**

325 A. Using actual information from the EIM, including five- and 15-minute pricing, the
326 Company identifies the incremental resource that could have facilitated the transfer to
327 an adjacent EIM area or the CAISO in each five-minute interval. The benefit is then
328 calculated as the difference between the revenue received less the expense of generation
329 assumed to supply the transfer. In the event of an import, the benefit is equal to the cost
330 of the import minus the avoided expense of the generation that would have otherwise
331 been dispatched.

332 **Q. What are the estimated 2017 EIM benefits as reported by CAISO?**

333 A. CAISO publishes quarterly EIM Benefit Reports ("CAISO Benefit Reports")
334 estimating the benefits realized through EIM operation for each entity that participates

335 in the EIM. The CAISO Benefit Reports estimated EIM benefits attributable to
336 PacifiCorp of approximately \$37.4 million on a total-company basis for the deferral
337 period. In comparison, the CAISO estimated benefits for the prior year deferral period
338 were approximately \$45.5 million on a total-company basis. The benefits estimated for
339 PacifiCorp in the CAISO Reports include the benefits of EIM operation due to more
340 efficient dispatch (both inter- and intra-regional), reduced renewable energy
341 curtailment, and reduced flexibility reserves.

342 **Q. What is the difference between the EIM benefits estimated by CAISO and the**
343 **inter-regional EIM benefits calculated by the Company?**

344 A. The EIM benefits are embedded in the Actual NPC through lower fuel and purchased
345 power costs. However, the Company is able to calculate the margin realized on its EIM
346 imports and exports, the inter-regional benefit. In its quarterly EIM Benefit Report,
347 CAISO estimates all the benefits of EIM participation, including intra-regional
348 dispatch savings (optimizing the resources in PacifiCorp's two balancing area
349 authorities), inter-regional dispatch savings (transacting with other EIM participants),
350 reduced renewable energy curtailment and flexibility reserve savings (reduced reserves
351 due to diversity across the EIM footprint).

352 The CAISO calculation utilizes a counterfactual scenario that is built to mimic the
353 more manual dispatch process PacifiCorp utilized in actual operations before EIM
354 participation. Based on the subjectivity of the counterfactual scenario, the EIM benefits
355 reports by CAISO are presented as an estimate.

356 **Q. Does this conclude your direct testimony?**

357 A. Yes.

Rocky Mountain Power
Exhibit RMP__(MGW-1)
Docket No. 18-035-01
Witness: Michael G. Wilding

Rocky Mountain Power
Docket No. 18-035-01
Witness: Robert M. Meredith

BEFORE THE PUBLIC SERVICE COMMISSION
OF THE STATE OF UTAH

ROCKY MOUNTAIN POWER

Direct Testimony of Robert M. Meredith

March 2018

1 **Q. Please state your name, business address, and present position with PacifiCorp,**
2 **dba Rocky Mountain Power (“the Company”).**

3 A. My name is Robert M. Meredith. My business address is 825 NE Multnomah Street,
4 Suite 2000, Portland, Oregon 97232. My present position is Manager, Pricing and Cost
5 of Service.

6 **QUALIFICATIONS**

7 **Q. Briefly describe your educational and professional background.**

8 A. I graduated magna cum laude from Oregon State University in 2004 with a Bachelor
9 of Science degree in Business Administration and a minor in Economics. In addition to
10 my formal education, I have attended various industry-related seminars. I have worked
11 for the Company for 13 years in various roles of increasing responsibility in the
12 Customer Service, Regulation, and Integrated Resource Planning departments. I have
13 over seven years of experience preparing cost of service and pricing related analyses
14 for all of the six states that PacifiCorp serves. I assumed my present position in March
15 2016.

16 **Q. Have you testified in prior regulatory proceedings?**

17 A. Yes. I have previously filed testimony on behalf of the Company in regulatory
18 proceedings in Utah, Wyoming, Idaho, Oregon, Washington, and California.

19 **PURPOSE AND SUMMARY OF TESTIMONY**

20 **Q. What is the purpose of your testimony?**

21 A. The purpose of my testimony is to present and support the Company’s proposed rate
22 spread and rates in Schedule 94 to recover the requested Energy Balancing Account
23 (“EBA”) deferral amount of \$2.8 million calculated by Company witness Mr. Michael

24 G. Wilding for the 12-months ended December 31, 2017 (“2018 EBA”). I also provide
25 the rate spread and rates for the alternative rate proposal for recovery of the Deer Creek
26 mine amortization discussed by Mr. Wilding, which, if approved, would result in a
27 refund of \$6.5 million for the 2018 EBA.

28 **Q. Please summarize the rate impacts for the proposed change to Schedule 94 for this**
29 **filing.**

30 A. Recovery of the \$2.8 million deferral in Schedule 94, would be an increase of 0.1
31 percent. Exhibit RMP____(RMM-1), page 1, shows the net impact by rate schedule. If
32 the alternative rate proposal is adopted, the \$6.5 million refund in Schedule 94 would
33 be a decrease of 0.3 percent over current rates. Exhibit RMP____(RMM-3), page 1,
34 shows the net impact by rate schedule for the alternative rate proposal.

35 **PROPOSED EBA RATE SPREAD**

36 **Q. What is the 2018 EBA deferral amount in this case?**

37 A. The total 2018 EBA deferral is \$2.8 million, as shown in Table 1 of Mr. Wilding’s
38 testimony. The Company proposes to recover this amount over one year with interim
39 rates effective May 1, 2018, consistent with the Commission’s order in Docket No. 09-
40 035-15 issued on February 16, 2017 (“EBA Order”). In accordance with the EBA
41 Order, any difference between 2018 EBA surcharges and the final amount approved by
42 the Commission would be included in new rates, effective May 1, 2019.

43 **Q. How does the Company propose to allocate the 2018 EBA deferral balance across**
44 **customer classes?**

45 A. The Company proposes to spread the 2018 EBA deferral across customer rate schedules
46 consistent with the NPC Allocators agreed to by the parties and approved by the

47 Commission in the 2014 general rate case, Docket No. 13-035-184 (“2014 GRC”). The
48 allocators and allocations by rate schedule are shown on page 2 in Exhibit
49 RMP___(RMM-1).

50 **Q. How does the Company propose to allocate the 2018 EBA revenue to those**
51 **customer classes that were not reflected in the NPC Allocators?**

52 A. There are two customer classes—Schedule 21 and Schedule 31—that are subject to the
53 EBA but were not included in the Company’s cost of service studies in the 2014 GRC
54 and therefore not reflected in the NPC Allocators. For the customer classes, the
55 Company proposes to apply the same percentage change to these customer classes as
56 Schedule 9 consistent with the rate spreads approved in prior EBA’s.

57 **Q. How does the Company propose to allocate the 2018 EBA revenue to Contract**
58 **Customer 1?**

59 A. Consistent with the terms of the contract approved by the Public Service Commission
60 of Utah in Docket No. 15-035-81, the 2018 EBA revenue allocation for Contract
61 Customer 1 is based on the overall 2018 EBA percentage to tariff customers in Utah.

62 **Q. How does the Company propose to collect the 2018 EBA deferral after these**
63 **adjustments to the NPC Allocators?**

64 A. The results of the 2018 EBA deferral spread based on the NPC Allocator are then
65 proportionally adjusted for all customer classes to collect a total target amount of \$2.8
66 million.

67 **Q. What present revenues and billing determinants is the Company proposing to use**
68 **to allocate the 2018 EBA?**

69 A. The Company has developed the rate spread using the Commission approved Step 2

70 present revenues and the billing determinants set forth in the 2014 GRC Stipulation.
71 The billing determinants were adjusted to account for revenue from loads enrolled in
72 the Subscriber Solar Program that no longer pay for the EBA.

73 **Q. Why were billing determinants adjusted for revenues from the Subscriber Solar**
74 **Program?**

75 A. Special Condition 15 of Schedule 73, Subscriber Solar Program Rider – Optional,
76 provides that the EBA adjustment will no longer apply to participating contract
77 Subscriber Solar Energy Block kWh one year after the Subscriber Solar Program solar
78 resource begins commercial operation. Since the commercial operation date for the
79 Subscriber Solar Program solar resource was December 30, 2016, the EBA would not
80 apply to the revenue from energy enrolled in the Subscriber Solar Program during the
81 entire period over which the 2018 EBA would be collected (May 1, 2018 through April
82 30, 2019). Adjusting the billing determinants reflects this change in revenue that is
83 subject to EBA adjustments.

84 **Q. Please describe how billing determinants were adjusted for revenues from the**
85 **Subscriber Solar Program.**

86 A. The revenue from blocks enrolled in the Subscriber Solar Program from the most recent
87 12 month period available at the time of this filing (March 1, 2017 through February
88 28, 2018) was subtracted from the revenue from energy charges for residential
89 schedules, Schedule 6, Schedule 6A, and Schedule 23 customers, which are used as
90 billing determinants for calculating the 2018 EBA rates.

91 **PROPOSED RATES FOR SCHEDULE 94**

92 **Q. How were the proposed Schedule 94 rates developed for each customer class?**

93 A. Consistent with the EBA Rate Determination provision in Schedule 94, the proposed
94 rates for each customer class were determined by dividing the allocated EBA deferral
95 amount to each rate schedule and applicable contract by the corresponding 2014 GRC
96 Step 2 forecast Power Charge and Energy Charge revenues. The EBA rate is a
97 percentage applied to the monthly Power Charges and Energy Charges.

98 **Q. Please describe Exhibit RMP___(RMM-2).**

99 A. Exhibit RMP___(RMM-2) contains the billing determinants, including the Subscriber
100 Solar Program adjustment, and the calculations of the proposed EBA rates in this case.

101 **PROPOSED EBA RATES FOR ALTERNATIVE RATE PROPOSAL**

102 **Q. If the Commission approves the accounting treatment to offset the Deer Creek**
103 **Mine amortization costs against the regulatory liability created for federal tax**
104 **reform impacts, as described in Mr. Wilding’s testimony, what would be the rate**
105 **impact to customers?**

106 A. Without the Deer Creek Mine amortization costs, the change in Schedule 94 would be
107 a decrease of \$6.5 million, or 0.3 percent instead of the \$2.8 million, or 0.1 percent
108 increase, calculated based on the currently approved accounting treatment. Exhibit
109 RMP___(RMM-3) and Exhibit RMP___(RMM-4) show the net impact, rate spread and
110 prices by rate schedule without the Deer Creek Mine amortization costs. The rate
111 spread and rate calculation methodologies are the same as in Exhibits RMP___(RMM-
112 1) and RMP___(RMM-2).

113 **Q. Please describe Exhibit RMP___(RMM-5).**

114 A. Exhibit RMP___(RMM-5) contains a proposed EBA price comparison by rate schedule
115 with and without the Deer Creek Mine amortization costs.

116 **REVISED TARIFF SHEETS**

117 **Q. Please describe Exhibit RMP___(RMM-6).**

118 A. Exhibit RMP___(RMM-6) contains the tariff rate revisions reflecting the increase of
119 \$2.8 million for Schedule 94. It also contains a revision to Schedule 94 to reflect
120 changes to the EBA Procedural Schedule shown on page three of the tariff to be
121 consistent with timing prescribed in the EBA Order, and a revision to reflect new SAP
122 accounts used by the Company to track components of net power costs, as discussed
123 by Mr. Wilding. If the alternative rate proposal is adopted for a reduction of \$6.5
124 million, the Company will provide compliance tariff sheets reflecting the rates
125 contained in Exhibit RMP___(RMM-4).

126 **Q. Did you include workpapers with this filing?**

127 A. Yes. Workpapers have been included with this filing that detail the calculations shown
128 in my exhibits.

129 **Q. Does this conclude your direct testimony?**

130 A. Yes.

Proposed Tariffs

March 2018

ELECTRIC SERVICE SCHEDULE NO. 94 – Continued

Net Power Costs (NPC): the sum of costs incurred to acquire power to serve customers less revenues collected from sales for resale. NPC components are those included in the Company's production cost model and recorded in the FERC Accounts described in this electric service schedule.

Wheeling Revenue: Revenues from Transmission of Electricity of Others recorded in the FERC Account described in this electric service schedule.

EBA PROCEDURAL SCHEDULE (Beginning with the 2013 Annual EBA Filing)

1. Rocky Mountain Power will file its EBA application on or about March 15.
2. The Division of Public Utilities (DPU) will conduct a preliminary review of Rocky Mountain Power's application and provide a preliminary conclusion if the EBA filing appears to not depart from prior years' filings.
3. On or before May 1, the Public Service Commission of Utah (PSC) will determine whether to approve interim rates with an amortization period through April of the following year, effective May 1.
4. The DPU will then file its audit report by November 15, following which the PSC will set a schedule in the docket.
5. The PSC will hold a hearing on or about February 1 of the following year, after which a true-up of rates could be ordered.
6. The PSC will issue an order by March 1 of the following year before the next EBA filing is made.
7. Any true-up to interim rates will go into effect March 1, and be amortized through April 30 of the year following the year the application is filed.

EBA CALCULATIONS AND APPLICATION

APPLICABLE FERC ACCOUNTS: The EBA rate will be calculated using all components of EBAC as defined in the Company's most recent general rate case, major plant addition case, or other case where Base EBAC are approved. EBAC are typically booked to the following FERC accounts, as defined in Code of Federal Regulations, Subchapter C, Part 101, with the noted clarifications and exclusions:

FERC 501- Fuel

- FERC Sub 5011000
 - SAP 515100 – Coal Consumed-Generation (Include)
 - SAP (all other) – Legal, maintenance, utilities, labor related, miscel O&M (Exclude)
- FERC Sub 5013500 - Natural Gas Consumed (Non Gadsby) Natural Gas Swaps (Non Gadsby) (Include)
 - FERC Sub (All Other) – Property tax, office supplies, Labor, Fuel Handling, Supplies, Maintenance, Start-up Fuel, Start-up Fuel Diesel, Diesel Fuel Hedge, miscellaneous O&M, Flyash Sales (Exclude)

Accruals or estimates in accounts 447, 555, and 565 will be excluded; rather, expenses and revenue will be accounted for in the months that they are incurred. Adjustments shall be made to Actual EBAC that are consistent with Commission accepted or ordered adjustments, or adjustments called out in a stipulation or settlement agreement, as ordered in the most recent general rate case, major plant addition case, or other case where Base EBAC are approved.

EBA DEFERRAL: The monthly EBA Accrual (positive or negative) is determined by calculating the difference between Base NPC and Actual NPC as is described below.

Through May 31, 2016:

$$EBA\ Deferral_{Utah, month} = [(Actual\ EBAC_{month/MWh} - Base\ EBAC_{month/MWh}) \times Actual\ MWh_{Utah, month}] \times 70\%$$

Starting June 1, 2016 through December 31, 2019:

$$EBA\ Deferral_{Utah, month} = [(Actual\ EBAC_{month/MWh} - Base\ EBAC_{month/MWh}) \times Actual\ MWh_{Utah, month}] \times 100\%$$

Where:

$$Actual\ EBAC_{month/MWh} = (NPC_{Utah, month, actual} / Actual\ MWh_{Utah, month}) + (WR_{Utah, month, actual} / Actual\ MWh_{Utah, month})$$

$$Base\ EBAC_{month/MWh} = (NPC_{Utah, month, base} / Base\ MWh_{Utah, month}) + (WR_{Utah, month, base} / Base\ MWh_{Utah, month})$$

$NPC_{Utah, month}$ = Total Company NPC for the month multiplied by the appropriate allocation factors from the most recent general rate case, major plant additions case, or other case where Base EBAC are approved.

$WR_{Utah, month}$ = Total Company Wheeling Revenue for the month multiplied by the appropriate allocation factors from the most recent general rate case, major plant additions case, or other case where Base EBAC are approved.

(continued)

ELECTRIC SERVICE SCHEDULE NO. 94 – Continued

EBA Deferral Account Balance: the monthly EBA Account Balance will be calculated as follows:

$$\text{EBA Deferral Account Balance}_{\text{current month}} = \text{Ending Balance}_{\text{previous month}} + \text{Deferral}_{\text{current month}} \\ - \text{EBA Revenue}_{\text{current month}} + \text{EBA Carrying charge}_{\text{month}}$$

EBA CARRYING CHARGE: the EBA Carrying Charge will be calculated and applied to the monthly balance in the EBA Deferral Account as follows:

$$\text{EBA Carrying Charge}_{\text{month}} = [\text{Ending Balance}_{\text{previous month}} + (\text{Deferral}_{\text{current month}} \times 0.5) \\ - (\text{EBA Revenue}_{\text{current month}} \times 0.5)] \times 0.5\%$$

EBA RATE DETERMINATION: Annually, on the EBA Filing Date, Rocky Mountain Power shall file with the Commission an application for establishment of an EBA rate to become effective on the EBA Rate Effective Date of that year. The EBA Deferral Account Balance as of December 31 shall be allocated to all retail tariff rate schedules and applicable special contracts based on the rate spread approved by the Commission. The new EBA rate will be determined by dividing the EBA Deferral Account Balance allocated to each rate schedule and applicable contract by the schedule or contract forecasted Power Charge and Energy Charge revenues. The EBA rate will be a percentage increase or decrease applied to the monthly Power Charges and Energy Charges of the Customer's applicable schedule or contract as set forth in the schedule.

AUDIT PROCEDURES: All items recorded in the EBA Balancing Account are subject to regulatory audit and prudence review. The Division of Public Utilities will complete its audit according to the EBA Procedural Schedule.

First Revision of Sheet No. 94.3
Canceling Original Sheet No. 94.3

ELECTRIC SERVICE SCHEDULE NO. 94 – eContinued

Net Power Costs (NPC): the sum of costs incurred to acquire power to serve customers less revenues collected from sales for resale. NPC components are those included in the Company's production cost model and recorded in the FERC Accounts described in this electric service schedule.

Wheeling Revenue: Revenues from Transmission of Electricity of Others recorded in the FERC Account described in this electric service schedule.

EBA PROCEDURAL SCHEDULE (Beginning with the 2013 Annual EBA Filing)

1. Rocky Mountain Power will file its EBA application on or about March 15.
2. The Division of Public Utilities (DPU) will conduct a preliminary review of Rocky Mountain Power's application and provide a preliminary conclusion if the EBA filing appears to not depart from prior years' filings.
- ~~4.3.~~On or before May 1, the Public Service Commission of Utah (PSC) will determine whether to approve interim rates with an amortization period through April of the following year, effective May 1.
- ~~2.4.~~The ~~Division of Public Utilities~~DPU will then file ~~complete~~ its audit report ~~and supporting testimony~~ by ~~July~~ November 15, following which the PSC will set a schedule in the docket.
- ~~3.5.~~The PSC will hold a hearing on or about February 1 of the following year, after which a true-up of rates could be ordered~~Intervenors may conduct discovery, with a 14 day turn around, beginning March 15.~~
- ~~4.6.~~The PSC will issue an order by March 1 of the following year before the next EBA filing is made~~Hearings on the application will be completed by September 15.~~
- ~~5.7.~~Any true-up to interim rates ~~change necessary to recover or refund an EBA balance~~ will take go into effect March 1, and be amortized through April 30~~on or before November 1~~ of the year following the year the application is filed.

EBA CALCULATIONS AND APPLICATION

APPLICABLE FERC ACCOUNTS: The EBA rate will be calculated using all components of EBAC as defined in the Company's most recent general rate case, major plant addition case, or other case where Base EBAC are approved. EBAC are typically booked to the following FERC accounts, as defined in Code of Federal Regulations, Subchapter C, Part 101, with the noted clarifications and exclusions:

Accruals or estimates in accounts 447, 555, and 565 will be excluded; rather, expenses and revenue will be accounted for in the months that they are incurred. Adjustments shall be made to Actual EBAC that are consistent with Commission accepted or ordered adjustments, or adjustments called out in a stipulation or settlement agreement, as ordered in the most recent general rate case, major plant addition case, or other case where Base EBAC are approved.

EBA DEFERRAL: The monthly EBA Accrual (positive or negative) is determined by calculating the difference between Base NPC and Actual NPC as is described below.

Through May 31, 2016:

$$EBA\ Deferral_{Utah, month} = [(Actual\ EBAC_{month/MWh} - Base\ EBAC_{month/MWh}) \times Actual\ MWh_{Utah, month}] \times 70\%$$

Starting June 1, 2016 through December 31, 2019:

$$EBA\ Deferral_{Utah, month} = [(Actual\ EBAC_{month/MWh} - Base\ EBAC_{month/MWh}) \times Actual\ MWh_{Utah, month}] \times 100\%$$

Where:

$$Actual\ EBAC_{month/MWh} = (NPC_{Utah, month, actual} / Actual\ MWh_{Utah, month}) + (WR_{Utah, month, actual} / Actual\ MWh_{Utah, month})$$

$$Base\ EBAC_{month/MWh} = (NPC_{Utah, month, base} / Base\ MWh_{Utah, month}) + (WR_{Utah, month, base} / Base\ MWh_{Utah, month})$$

$NPC_{Utah, month}$ = Total Company NPC for the month multiplied by the appropriate allocation factors from the most recent general rate case, major plant additions case, or other case where Base EBAC are approved.

$WR_{Utah, month}$ = Total Company Wheeling Revenue for the month multiplied by the appropriate allocation factors from the most recent general rate case, major plant additions case, or other case where Base EBAC are approved.

Canceling ~~Second~~ Third Revision of Sheet No. 94.10

ELECTRIC SERVICE SCHEDULE NO. 94 – eContinued

EBA Deferral Account Balance: the monthly EBA Account Balance will be calculated as follows:

$$\text{EBA Deferral Account Balance}_{\text{current month}} = \text{Ending Balance}_{\text{previous month}} + \text{Deferral}_{\text{current month}} \\ - \text{EBA Revenue}_{\text{current month}} + \text{EBA Carrying charge}_{\text{month}}$$

EBA CARRYING CHARGE: the EBA Carrying Charge will be calculated and applied to the monthly balance in the EBA Deferral Account as follows:

$$\text{EBA Carrying Charge}_{\text{month}} = [\text{Ending Balance}_{\text{previous month}} + (\text{Deferral}_{\text{current month}} \times 0.5) \\ - (\text{EBA Revenue}_{\text{current month}} \times 0.5)] \times 0.5\%$$

EBA RATE DETERMINATION: Annually, on the EBA Filing Date, Rocky Mountain Power shall file with the Commission an application for establishment of an EBA rate to become effective on the EBA Rate Effective Date of that year. The EBA Deferral Account Balance as of December 31 shall be allocated to all retail tariff rate schedules and applicable special contracts based on the rate spread approved by the Commission. The new EBA rate will be determined by dividing the EBA Deferral Account Balance allocated to each rate schedule and applicable contract by the schedule or contract forecasted Power Charge and Energy Charge revenues. The EBA rate will be a percentage increase or decrease applied to the monthly Power Charges and Energy Charges of the Customer's applicable schedule or contract as set forth in the schedule.

AUDIT PROCEDURES: All items recorded in the EBA Balancing Account are subject to regulatory audit and prudence review. The Division of Public Utilities will complete its audit according to the EBA Procedural Schedule.
