Sirs,

I'm opposed to Rocky Mountain Power's attempt to lower standards for increased energy efficiency. Given the alarming reports that continue to come from scientists we should be reducing energy generated by the dirty coal RMP uses by extra efforts to make our buildings more efficient and minimize consumption where possible.

I support higher levels of electricity savings through [Docket No. 18-035-27](#). Please tell Rocky Mountain Power directly that they should strive for more electricity savings, not less.

IAN WADE
