Dear Sir or Madam,

It has come to my attention that the Utah Public Service Commission (PSC) is currently considering comments in the matter of Docket # 18-035-28 concerning the value of expired net-metering credits.

I generally support Utah Clean Energy's proposals! Specifically, that the PSC consider:

The value of expired net metering credits are NOT being used as effectively as they could be to provide additional assistance to low income families. As I understand it, the company is doing an end-run around legislative intent. Instead of using the money to provide help to low-income Utahns, they are using it to fatten their bottomline.

I understand that we are dealing with a regulated utility and that "fattening the bottom-line" can't happen since the company's over-all rate-of-return is regulated. But that's only if they are earning their target rate.

Their trick of accounting clearly flies in the face of the legislatures desire to help low-income families.

I support the recommendation to transfer these funds to the Weatherization Assistance Program. Doing so ensures that the funds provide additional support for low-income programs rather than offsetting cost.

Why would a big company like Dominion risk the political black-eye these actions threaten to give them? Doesn't the possible negative publicity of something this "grinch-like" sober them?

Cordially,

Art Brothers

I support Utah Clean Energy proposals before the PSC related to net metering credits. The value of expired net metering credits are not being used as effectively as they could be to provide additional assistance to low income families. I support the recommendation to transfer these funds to the Weatherization Assistance Program. The funds from net metering credits should provide additional support for low income programs rather than offsetting cost.

As a member of UCARE and a supporter of Utah Clean Energy I submit for your consideration:

The excess net-metering power that RMP steals from me each March is currently being used to offset their obligations. This is objectionable. This should be used to provide ADDITIONAL assistance to low-income families through the Weatherization Assistance Program. Another use for these funds could be a solar-pilot project for low-income homes.

Thank you for your consideration.

Hello,

I am emailing regarding docket #18-035-28: <https://psc.utah.gov/2018/07/03/docket-no-18-035-28/>
I am rooftop solar customer. I wish that Rocky Mountain Power would roll over extra power accrued to the next year, but failing that I like the idea of using that money (>\$150K per year) to help out less fortunate. It seems that current practice is not a very efficient use of this money, despite having the best intentions. Why not use this money to help more low-income homes become energy efficient, which will reduce energy costs not just for one month, but for years to come? Another consideration is a solar pilot program for low-income homes. The Weatherization Assistance Project could partner with affiliates to help families that have already participated in the weatherization program to take the next step to access the benefits of clean solar power!

Thanks,
Trafton Drew
