Please make all possible accommodation, and use your regulatory powers, to use solar credits to assist low income individuals to make their buildings more energy efficient. This will benefit everyone in the long run. Rocky Mt Powers' to avoid this eventuality, likely to maximize profit, is both a betrayal of the original intent of the project and will result in bad long term effects for all of us. Changes are coming one way or the other: You need to on a he right side of history

It follows that weatherization is the best route going forward.

Thank you, Mark
Mark Baer / SLC Utah

Five years ago, I had solar panels installed on my home. My reasons for doing so were to save money and do a small part in helping produce clean energy to help the environment.

RMP has been taking the excess energy credits at the end of the year of solar customers that generate more electricity than they use and instead of increasing the overall amount going to HELP, have instead decreased the amount each customer pays towards HELP and pocketed the difference.

I feel like these funds should be going to help increase the amount going towards helping low-income customers even if it means using the WAP program to help lower their gas bills as well. The intended use of these solar credits was to be for helping low-income folks and it is disingenuous of RMP to effectively take part of those credits for their bottom line through interesting methods.

Thanks,
