Additional info with Empire electric grids charges .

With the well grid charge and house grid charge being billed separately I am paying 64 dollars a month. Yearly my payment is 768.00 dollars. Thats without any electric usage . How can a customer afford to live in this area of Utah . The customer has no options to pick from another provider. Empire electric is the only provider . My grid access charges are only going to increase. I will not be able to live let alone retire in Utah with this high cost of me getting basic energy access to live.
