

BEFORE THE PUBLIC SERVICE COMMISSION OF UTAH

---

In the Matter of the Application of Rocky Mountain Power for Authority to Increase its Retail Electric Utility Service Rates in Utah and for Approval of its Proposed Electric Service Schedules and Electric Service Regulations )  
 ) **Docket No. 20-035-04**  
 ) **Phase II Surrebuttal Testimony of**  
 ) **Ron Nelson**  
 ) **On behalf of the**  
 ) **Office of Consumer Services**  
 )

---

November 6, 2020

1        **I. INTRODUCTION**

2        **Q.    PLEASE STATE YOUR NAME, BUSINESS ADDRESS, AND**  
3        **OCCUPATION.**

4        A.    My name is Ron Nelson. I am a Director with Strategen Consulting. My  
5        business address is Suite 400, 2150 Allston Way, Berkeley, California  
6        94704.

7  
8        **Q.    ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?**

9        A.    I am testifying on behalf of the Utah Office of Consumer Services (“OCS”).

10

11       **Q.    ARE YOU THE SAME RON NELSON WHO FILED EARLIER**  
12       **TESTIMONY IN THIS DOCKET?**

13       A.    Yes. I filed Phase II direct testimony and rebuttal testimony.

14

15       **Q.    WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?**

16       A.    I respond to several intervenors’ rebuttal testimony on Rocky Mountain  
17       Power’s (“RMP’s”) proposed cost of service model, revenue  
18       apportionment, rate design, and AMI Project.

19

20       **Q.    PLEASE PROVIDE A DESCRIPTION OF THE EXHIBITS AND**  
21       **WORKPAPERS RELATED TO YOUR SURREBUTTAL TESTIMONY.**

22       A.    I have attached the following exhibits and workpapers:

- 23           • Exhibit OCS 5.1S consists of responses to data requests referenced in  
24           this testimony and the attached exhibits.
- 25           • Workpaper OCS 5.1S modifies RMP’s rebuttal ECOSS to demonstrate  
26           the effect of RMP’s new FERC account 364 subfunctionalization.
- 27           • Workpaper OCS 5.2S modifies RMP’s rebuttal ECOSS to demonstrate  
28           the effect of OCS’ recommended ECOSS and revenue apportionment  
29           modifications.
- 30           • Workpaper OCS 5.3S documents my revenue apportionment analysis.

31

32   **Q. DOES NOT RESPONDING TO AN ISSUE INDICATE AGREEMENT?**

- 33   A.   No. I respond to a narrow scope of issues in my surrebuttal and my not  
34       commenting on an issue should not be interpreted as agreement.

35

36   **Q. HOW IS YOUR SURREBUTTAL TESTIMONY ORGANIZED?**

- 37   A.   My surrebuttal testimony is organized into the following sections:

- 38           I.   Introduction
- 39           II.   Embedded Cost of Service Study (“ECOSS”):
- 40               a.   Production & transmission (“P&T”) subfunctionalization
- 41               b.   Distribution subfunctionalization
- 42               c.   AMI functionalization
- 43               d.   Production & transmission classification
- 44               e.   Distribution classification
- 45           III.   Marginal Cost of Service Study (“MCOSS”)
- 46           IV.   Revenue apportionment
- 47           V.   Rate design
- 48               a.   Rate unbundling
- 49               b.   Interruptible rate pilot
- 50               c.   Residential rate design

51 VI. AMI project

52

53 **Q. WHAT ARE THE HIGH-LEVEL TAKEAWAYS FROM YOUR**  
54 **SURREBUTTAL TESTIMONY?**

55 A. RMP's rebuttal testimony disengages from objective facts and analysis in  
56 repeated attempts to divert attention from the shortcomings of its  
57 proposals and deflect accountability. RMP's rebuttal testimonies also  
58 promote multiple subjective decisions that benefit its commercial and  
59 industrial classes at a significant cost to its residential class.

60 RMP does not dispute the objective facts and analysis from my  
61 direct testimony, such as the impacts I quantified from RMP's new  
62 subfunctionalization and rate unbundling process. RMP's avoidance has  
63 left my analysis uncontested: RMP's proposed P&T subfunctionalization  
64 and related rate unbundling shift cost collection away from volumetric bill  
65 components to demand related rate components and result in an  
66 unprecedented change to ratemaking. I continue to strongly recommend  
67 that the PSC reject RMP's proposed fixed and variable  
68 subfunctionalization and rate unbundling proposals.

69 As for the proposed AMI Project, RMP's rebuttal attempts to deflect  
70 accountability by refusing to provide regulators with a comprehensive  
71 accounting of its grid modernization investment plans. Instead, RMP is  
72 recommending a piecemeal regulatory approach that will benefit  
73 shareholders by concealing the true cost of grid modernization and relieve

74 the utility from providing the full spectrum of potential grid modernization  
75 benefits to its customers. AMI and other grid modernization investments  
76 represent a paradigm shift in the energy sector that regulators must  
77 address to ensure that customers receive benefits from these  
78 investments. I continue to support the recommendation made in my direct  
79 testimony as the initial steps that the PSC should take to ensure cost-  
80 effective grid modernization occurs within RMP's Utah service territory.

81 Many of RMP's decisions in this case favor the commercial and  
82 industrial classes. These decisions appear excessively subjective as they  
83 are made without sound supporting analysis from RMP. The subjective  
84 decisions begin in RMP's ECOSS with subfunctionalizing P&T and  
85 distribution using unprecedented and unsubstantiated methods, RMP's  
86 unsupported decisions then flow into revenue apportionment to justify  
87 arguments for low revenue allocations for commercial and industrial  
88 classes, such as Schedule 9, and end with rates based on unbundled cost  
89 components never before seen in the United States to artificially lower  
90 energy rates for these customers. RMP's bias is prevalent and consistent.

91 I recommend that the PSC scrutinize the methodical and  
92 comprehensive nature of RMP's subjective ECOSS and rate design  
93 decisions when evaluating RMP's proposals against the alternatives  
94 presented in this case.

95 **II. ECOSS**

96 a. P&T subfunctionalization

97 **Q. WHICH INTERVENOR REBUTTAL DO YOU RESPOND TO IN THIS**  
98 **SECTION?**

99 A. I respond to RMP Witness Robert Meredith and DPU Witness Bruce  
100 Chapman. Notably, UAE, Walmart, and Kroger did not address RMP's  
101 P&T subfunctionalization in rebuttal testimonies.

102

103 **Q. WHAT DOES WITNESS MEREDITH SAY ABOUT RMP'S P&T**  
104 **SUBFUNCTIONALIZATION?**

105 A. Witness Meredith stresses that "sub-functionalizing production and  
106 transmission into fixed and variable categories is necessary to facilitate  
107 the Company's proposed retail rate unbundling."<sup>1</sup> Witness Meredith also  
108 claims that I "oppose showing this additional level of information in the  
109 cost of service study, because it facilitates the Company's proposed  
110 unbundling of prices, which [Mr. Nelson] oppose."<sup>2</sup>

111

112 **Q. HOW DO YOU RESPOND TO WITNESS MEREDITH?**

113 A. Witness Meredith has mischaracterized my opposition to P&T  
114 subfunctionalization. I do not oppose showing additional information in a

---

<sup>1</sup> Meredith Rebuttal at 11.

<sup>2</sup> Meredith Rebuttal at 13.

115 cost of service study – if the information is relevant and meaningful to  
116 reasonable cost of service modeling. I also do not oppose retail rate  
117 unbundling – if the unbundling method is reasonable. For RMP's  
118 subfunctionalization, the additional level of information is not informative;  
119 because the categories of fixed and variable do not inform or improve cost  
120 classification or allocation. This is important because it means that RMP's  
121 proposed subfunctionalization does not inform or improve cost causation  
122 within the ECOSS, which is the purpose of each step within the study.

123 In fact, RMP's P&T subfunctionalization proposal does not meet  
124 Witness Meredith's own criteria for evaluating cost of service methodology  
125 alternatives.

126

127 **Q. WHAT ARE WITNESS MEREDITH'S CRITERIA FOR EVALUATING**  
128 **COST OF SERVICE METHODOLOGY ALTERNATIVES?**

129 A. In rebuttal testimony, Witness Meredith asserts that methodologies should  
130 strike a balance between:

- 131 1. reflecting cost causality  
132 2. being relatively simple and easy for stakeholders to understand  
133 3. using industry-accepted practices  
134 4. minimizing the rate impacts that customers experience.<sup>3</sup>

135

---

<sup>3</sup> Meredith Rebuttal at 8-9.

136 **Q. WHY DOES RMP'S PROPOSED P&T SUBFUNCTIONALIZATION FAIL**  
137 **THESE CRITERIA?**

138 A. I address each criterion below:

- 139 1. RMP does not use its proposed fixed and variable subfunctionalization  
140 to better reflect cost causation, but instead to inform rate design  
141 through a distorted ECOSS. Better reflecting cost causation is  
142 necessarily demonstrated through a change in classification or  
143 allocation. RMP's subfunctionalization does not alter classification or  
144 allocation and therefore fails RMP's first criterion.
- 145 2. I was the only intervenor to demonstrate that I understood the  
146 mechanics of RMP's subfunctionalization and rate unbundling  
147 proposals. I am also the only intervenor to oppose it. As I noted in my  
148 rebuttal testimony, the DPU and Walmart made erroneous  
149 assumptions prompted by RMP's extremely convoluted and confusing  
150 subfunctionalization proposal. Intervenors' confusion demonstrates  
151 that RMP's proposal fails the second criterion.
- 152 3. There is no industry related publication endorsing this specific P&T  
153 subfunctionalization. Witness Meredith claims that that the Company  
154 performs a similar process in Wyoming but provides specific little  
155 support for his characterization of that mechanism in testimony or in  
156 discovery. In the Wyoming PSC order provided by RMP it appears  
157 RMP has a Power Cost Adjustment Mechanism (PCAM) that "tracks  
158 power costs over a 12-month period and compares them against a

159 baseline net power cost established in a general rate case.”<sup>4</sup> This is  
160 not what is being proposed in this case for a couple of reasons. First,  
161 based on the information RMP provided, the mechanism appears akin  
162 to a fuel clause adjustment mechanism that adjusts outside of a rate  
163 cases—RMP’s subfunctionalization and rate unbundling proposals  
164 would not. Second, based on the order provided, the Wyoming PCAM  
165 does not appear to be informed by the same subfunctionalization  
166 approach. This is not meant to be an exhaustive list of differences.  
167 Most importantly, however, is the fact that RMP can only point to one  
168 other jurisdiction that has used a somewhat similar approach that RMP  
169 proposed in that jurisdiction. This is not evidence of a best or accepted  
170 industry practice. The proposal clearly fails the third criterion.

171 4. The fourth criterion should be categorized as a rate design principle,  
172 not an ECOSS criterion. The ECOSS is necessarily focused on  
173 costs—not rate impacts. Rates evolve from the ECOSS through  
174 revenue apportionment and rate design. Only after an ECOSS is  
175 conducted and an analyst looks to revenue apportionment and rate  
176 design is it appropriate to consider rate impacts. It would not be a best  
177 practice to alter ECOSS methodologies to minimize rate impacts as  
178 implied by Witness Meredith.

---

<sup>4</sup> See RMP’s response to OCS Data Request 27.4 and the associated attachment at 9-10.

179

180 **Q. DOES WITNESS MEREDITH REBUT YOUR ANALYSIS OF THE**  
181 **IMPACTS OF RMP'S PROPOSED SUBFUNCTIONALIZATION?**

182 A. No. In my direct testimony, I demonstrated how RMP's  
183 subfunctionalization step, by directly enabling the rate unbundling step,  
184 results in shifting cost categorization from energy to demand for rate  
185 design purposes. Witness Meredith does not dispute my findings of these  
186 results. I will discuss this further in the unbundling section of my  
187 surrebuttal.

188

189 **Q. WHAT DOES WITNESS CHAPMAN SAY ABOUT RMP'S P&T**  
190 **SUBFUNCTIONALIZATION?**

191 A. Witness Chapman appears to maintain the mistaken assumption from his  
192 direct testimony – which I responded to at length in my rebuttal – that  
193 RMP's subfunctionalization and classification are complementary ECOSS  
194 steps that together contribute to RMP's ECOSS results.

195

196 **Q. CAN YOU PROVIDE AN EXAMPLE OF THIS ASSUMPTION?**

197 A. Yes. Witness Chapman finds my statements contradictory that P&T  
198 subfunctionalization has no effect on RMP's ECOSS results, and that it  
199 also shifts costs in the direction of demand and away from energy.<sup>5</sup>

---

<sup>5</sup> Chapman Rebuttal at 4.

200

201 **Q. HOW DO YOU RESPOND?**

202 A. It is important to first note that ECOSS studies follow three basic and  
203 sequential steps.<sup>6</sup> First, the analyst functionalizes costs.  
204 Subfunctionalization is a sub-step within the first functionalization step that  
205 further functionalizes costs. For example, distribution costs are  
206 subfunctionalized into primary and secondary distribution functions.  
207 Another example is that transmission costs can be subfunctionalized into  
208 sub-transmission functions. Second, the analyst classifies costs.  
209 Traditionally, these categories are energy, demand, and customer. Third,  
210 and lastly, the analyst allocates costs between classes. A necessary  
211 implication of this sequence is that subfunctionalized costs are classified  
212 and/or allocated differently than if the costs were not subfunctionalized.  
213 Both examples I provided – subfunctionalized secondary distribution and  
214 subtransmission – would be allocated differently than they would be in a  
215 cost study that did not subfunctionalize. *In fact, classifying and/or*  
216 *allocating costs differently is the entire purpose of subfunctionalization.* If  
217 costs are not classified or allocated differently – as is the case with RMP  
218 proposed subfunctionalization of P&T – there is no reason to  
219 subfunctionalize.

---

<sup>6</sup> See *generally* NARUC Electric Manual and Electricity Pricing: Engineering Principles and Methodologies (Vogt, 2013).

220 Contrary to well established ECOSS procedure, RMP's P&T  
221 classification and allocation steps are unrelated to and uninformed by its  
222 P&T subfunctionalization step. Instead of building classification or  
223 allocation categories off its sub-functions, RMP separately creates its sub-  
224 functions without changing its classification or allocation categories at all.  
225 Essentially, RMP confuses the functionalization and classification steps;  
226 conducting classification first then functionalization. This results in RMP  
227 classifying and allocating P&T costs into energy and demand without any  
228 influence from its sub-functions, which is why the final ECOSS results are  
229 unaffected. However, RMP does not use allocated cost categories to  
230 design rates; RMP instead uses the separate "variable" and "fixed" sub-  
231 functions to "unbundle" rate design. Using these sub-functions instead of  
232 the classified and allocated costs has the effect of shifting costs away from  
233 volumetric cost-based rate collection.

234 Witness Chapman's faulty assumption is more evidence of how  
235 confusing RMP's approach is. Witness Chapman rightly assumes that  
236 RMP's subfunctionalization would perform like every other ECOSS, but it  
237 does not.

238

239 **Q. DOES WITNESS CHAPMAN BELIEVE THAT RMP'S**  
240 **SUBFUNCTIONALIZATION FOLLOWS ITS CLASSIFICATION?**

241 A. It appears so. Witness Chapman mentions that because  
242 "subfunctionalization occurs following classification of production and

243 transmission into demand and energy,” that demand and energy shares  
244 should be preserved, and that RMP has done just that.<sup>7</sup>

245

246 **Q. WHY DOES WITNESS CHAPMAN BELIEVE THIS?**

247 A. It appears that Witness Chapman is referencing how Witness Meredith  
248 describes the process in direct testimony: “the Production and  
249 Transmission functions, which are broken out into demand-related and  
250 energy-related, were split into a further dimension of Fixed and Variable  
251 costs.”<sup>8</sup> Witness Meredith makes it sound as though the costs were  
252 classified into energy and demand categories and then further  
253 subfunctionalized into fixed and variable categories. RMP maintains the  
254 labels energy and demand alongside fixed and variable throughout its  
255 ECOSS, giving the impression that the energy and demand labels are  
256 preserved for use in rate design.

257

258 **Q. DOES RMP USE THE PRESERVED ENERGY AND DEMAND**  
259 **CATEGORIES IN RATE DESIGN?**

260 A. No. Even if RMP preserves the P&T classification in the ECOSS, those  
261 classified energy and demand costs are not actually used for rate design  
262 when RMP transitions from the ECOSS to its rate unbundling step. The

---

<sup>7</sup> Chapman Rebuttal at 5.

<sup>8</sup> Meredith Direct at 4.

263 processes are separate, which is what allows the subfunctionalized-then-  
264 unbundled fixed and variable rate categories to deviate from the classified  
265 demand and energy categories, even if they are all preserved throughout  
266 the ECOSS.

267

268 **Q. DO COST STUDIES USUALLY CLASSIFY THEN SUBFUNCTIONALIZE**  
269 **COSTS, AS RMP HAS SUGGESTED IT DID?**

270 A. No. Subfunctionalization does not occur after classification in a standard  
271 ECOSS. First of all, an analyst has to functionalize P&T into P&T.  
272 Functionalization is how these functions are technically defined. This  
273 suggests that RMP's method first functionalizes, then classifies and  
274 allocates, and at the end of the study subfunctionalizes costs. This  
275 appears to be the necessary order of the process because one cannot  
276 classify cost until the cost functions are defined through functionalization. I  
277 am not aware of a cost study that first classifies then functionalizes or  
278 subfunctionalizes costs, nor have I seen an industry publication supporting  
279 this method, nor did RMP provide any examples as support. As I  
280 described earlier in this section, the steps are done in order for a good  
281 reason: to accurately reflect cost causation, not to maintain various  
282 parallel cost categories for different uses in rate design.

283

284 **Q. DOES WITNESS CHAPMAN MISINTERPRET YOUR CONCERN WITH**  
285 **RMP'S DEVIATION FROM ITS ECOSS FOR RATE DESIGN?**

286 A. Yes. Witness Chapman states that “unlike traditional COS studies, there is  
287 no one-to-one mapping of cost causes to retail charges, which, in [Witness  
288 Nelson’s] view, complicates an understanding of the link between costs  
289 and prices.”<sup>9</sup> However, I do not expect one-to-one mapping from a COS  
290 study to retail charges; I expect rate design simply to be informed by the  
291 results of a properly conducted ECOSS. As I have explained in my direct  
292 testimony, my rebuttal, and throughout this surrebuttal, RMP’s proper  
293 demand and energy classifications do not inform its rate design. Instead,  
294 its fixed and variable sub-functions – which are unprecedented – guide its  
295 rate design.

296

297 **Q. DOES WITNESS CHAPMAN MISINTERPRET YOUR CONCERN WITH**  
298 **DISTRIBUTION COSTS?**

299 A. Yes. Witness Chapman states that “[Witness Nelson] also concludes that  
300 the fixed/variable approach, when applied to distribution costs, shifts costs  
301 in the direction of demand-related cost and away from energy-related  
302 cost.”<sup>10</sup> However, RMP’s subfunctionalization into fixed and variable  
303 categories was done to P&T, not distribution costs. My concern with  
304 shifted energy and demand categories is unrelated to distribution.

---

<sup>9</sup> Chapman Rebuttal at 5.

<sup>10</sup> Chapman Rebuttal at 6.

305                   Witness Chapman is correct that I am separately concerned about  
306                   distribution costs, specifically how RMP's rate design deviates from its  
307                   distribution classification into demand and customer categories.

308

309   **Q.    WHAT DO YOU CONCLUDE ABOUT RMP'S P&T**  
310   **SUBFUNCTIONALIZATION?**

311   A.    RMP's P&T subfunctionalization does not belong in its ECOSS. First, it  
312           does not satisfy Witness Meredith's own COS methodology criteria.  
313           Second, RMP does not dispute that it results in a shift from energy to  
314           demand related cost recovery within rate design. Third, it is not well  
315           understood by other intervenors and lacks transparency. The  
316           subfunctionalization of P&T should be rejected.

317

318                   b. Distribution subfunctionalization

319   **Q.    WHICH INTERVENOR REBUTTAL DO YOU RESPOND TO**  
320   **REGARDING DISTRIBUTION SUBFUNCTIONALIZATION?**

321   A.    I respond to RMP Witness Meredith and UAE Witness Justin Bieber about  
322           RMP's subfunctionalization of primary and secondary distribution costs.

323

324   **Q.    PLEASE SUMMARIZE RMP'S REBUTTAL TESTIMONY ON**  
325   **DISTRIBUTION SUBFUNCTIONALIZATION.**

326 A. Witness Meredith briefly addresses this issue. He recounts RMP's process  
327 for subfunctionalizing FERC accounts 364 through 368 to primary and  
328 secondary voltage, although he does not explain *how* the items in those  
329 accounts are categorized as primary or secondary. He states that the  
330 decision occurs "in consultation with the Company's Distribution  
331 Engineering Standards department."<sup>11</sup> He then reveals that, since filing its  
332 direct testimony, RMP "determined that 35 foot class four poles should be  
333 considered secondary."<sup>12</sup> RMP does not explain this decision other than to  
334 say that it came out of "further review with the Company's Distribution  
335 Standards Engineering department."<sup>13</sup> RMP incorporates the new  
336 subfunctionalization into its updated rebuttal ECOSS, thereby changing  
337 FERC account 364 to 6.44% secondary when it was formerly 0.14%  
338 secondary.<sup>14</sup>

339

340 **Q. HOW DO YOU RESPOND TO WITNESS MEREDITH?**

341 A. Once again, Witness Meredith's ECOSS method has failed his own  
342 ECOSS criteria. Specifically, the process for subfunctionalizing between  
343 primary and secondary voltage is not "relatively simple and easy for  
344 stakeholders to understand." Indeed, after several rounds of discovery and  
345 testimony, RMP still has not clarified its analytical approach. It is not

---

<sup>11</sup> Meredith Rebuttal at 14.

<sup>12</sup> Meredith Rebuttal at 14.

<sup>13</sup> Meredith Rebuttal at 14.

<sup>14</sup> Exhibit RMP\_\_\_(RMM-8R) and Exhibit RMP\_\_\_(RMM-2).

346 possible for stakeholders to understand how RMP chooses whether  
 347 equipment is primary or secondary – because RMP has consistently  
 348 avoided explaining it. RMP’s unsubstantiated decision to subfunctionalize  
 349 even more costs as secondary in rebuttal again reinforces my original  
 350 concerns.

351 Witness Meredith’s new subfunctionalization for FERC account 364  
 352 implies that 35-foot class four poles only carry secondary conductors.  
 353 However, Witness Meredith provided no evidence or explanation for this  
 354 implicit assumption.

355 When compared to PacifiCorp’s subfunctionalization of FERC  
 356 account 364 in its other jurisdictions, this new and unjustified Utah  
 357 subfunctionalization is concerning and inconsistent.

358

359 *Table 1: PacifiCorp Treatment of Poles, Towers, Fixtures (Account 364)<sup>15</sup>*

State	PacifiCorp 2019		RMP Rebuttal Proposal	
	Primary	Secondary	Primary	Secondary
CA	98.72%	1.28%		
ID	99.99%	0.01%		
OR	98.91%	1.09%		
UT	99.86%	0.14%	93.56%	6.44%
WA	99.74%	0.26%		
WY	98.39%	1.61%		
<b>Total</b>	99.37%	0.63%		

360

---

<sup>15</sup> See RMP’s response to OCS Data Request 8.21.

361 Table 1 demonstrates that until RMP decided, without any explanation, to  
 362 alter the subfunctionalization of FERC account 364, no other PacifiCorp  
 363 jurisdiction categorized poles, towers, or fixtures as even 2% secondary.  
 364 The average was under 1%. Now, RMP has categorized this account as  
 365 over 6% secondary. Without evidence of accounting practices and  
 366 engineering records to support this change, it is impossible to assess the  
 367 reasonableness of such a subjective decision. It is also important to note  
 368 the ECOSS impacts of the new subfunctionalization.

369

370 *Table 2: ECOSS Results for Different Account 364 Subfunctionalizations*<sup>16</sup>

Schedule No.	Description	Percent Change from Current Revenues	
		6.44% Secondary	0.14% Secondary
1	Residential	10.98%	10.75%
6	GS - Large	-3.87%	-3.61%
8	GS - Over 1 MW	-1.62%	-1.38%
7,11,12	Street & Area Lighting	-22.95%	-22.95%
9	GS - High Voltage	6.92%	6.92%
10	Irrigation	4.82%	5.24%
15	Traffic Signals	-6.30%	-6.17%
15	Outdoor Lighting	-31.01%	-30.99%
23	GS - Small	-5.80%	-5.92%
SpC	Customer 1	15.19%	15.19%

372

373

The third column in Table 2 displays RMP's rebuttal ECOSS results, when FERC account 364 is 6.44% secondary, while the last

---

<sup>16</sup> Workpaper OCS 5.1S

374 column shows the rebuttal ECOSS results when account 364 is back to its  
375 original 0.14% secondary. While the changes between the two are of  
376 course small, they are unmistakable. RMP's new subfunctionalization  
377 yielded higher revenue responsibility for the residential and small general  
378 service classes, and lower revenue responsibility for other commercial and  
379 industrial consumers. This change, as with many, appear to be in line with  
380 RMP's economic incentive to shift more costs onto the residential class to  
381 lower rates for its commercial and industrial customers.

382

383 **Q. PLEASE SUMMARIZE UAE'S REBUTTAL TESTIMONY ON**  
384 **DISTRIBUTION SUBFUNCTIONALIZATION.**

385 A. Witness Bieber claims several times that I do not provide evidence  
386 demonstrating the accuracy of my proposed changes to distribution  
387 subfunctionalization.

388

389 **Q. HOW DO YOU RESPOND TO UAE?**

390 A. My position is supported based on the principle that the Company has the  
391 burden of proving that its ECOSS methodologies are reasonable. RMP  
392 has not provided sufficient transparency to determine the reasonableness  
393 of its distribution subfunctionalization, which is something the Commission  
394 needs to ensure to set reasonable rates.

395

396 **Q. DOES WITNESS BIEBER FIND RMP'S METHODOLOGY**  
397 **TRANSPARENT?**

398 A. No. After critiquing my proposed distribution subfunctionalization, Witness  
399 Bieber goes on to question one of RMP's distribution classifications,  
400 stating that "basic logic would indicate that at least some amount of poles,  
401 towers, and fixtures in FERC Account 364 should be considered  
402 secondary."<sup>17</sup>

403  
404 **Q. DOES WITNESS BIEBER'S CONCERN WITH FERC ACCOUNT 364**  
405 **CORROBORATE YOUR OVERALL POSITION?**

406 A. Yes. Witness Bieber correctly characterizes my position, in his own words,  
407 that "without a transparent quantitative explanation of the costs, there is  
408 no way to know whether RMP's primary/secondary split calculations are  
409 accurate."<sup>18</sup> Witness Bieber then validates that very position by  
410 questioning RMP's classification for FERC account 364. Witness Bieber  
411 does not seem to recognize that he too is questioning RMP's methodology  
412 and that he too has no way to verify RMP's decisions because RMP has  
413 been insufficiently transparent. Witness Bieber chose not to make a  
414 subjective modification to demonstrate the impact of RMP's lack of  
415 transparency, while I did. We both have valid – almost identical –

---

<sup>17</sup> Witness Bieber at 18.

<sup>18</sup> Witness Bieber at 16.

416 arguments. For that reason, I support Witness Bieber's position that RMP  
417 should provide more information about distribution subfunctionalization.

418

419 **Q. WHAT DO YOU CONCLUDE ABOUT RMP'S DISTRIBUTION**  
420 **SUBFUNCTIONALIZATION?**

421 A. ECOSS methodologies need to be transparent, not kept in a black box.  
422 RMP has been unable to present a transparent distribution  
423 subfunctionalization methodology throughout multiple rounds of discovery  
424 and testimony. Given RMP's new, unexplained shift of FERC account 364  
425 costs toward secondary subfunctionalization and Witness Bieber's rebuttal  
426 identification of RMP's lack of transparency, I recommend that the  
427 Commission require RMP to analytically demonstrate the reasonableness  
428 of its subfunctionalization. I also recommend that the Commission  
429 consider this when reviewing my alternate ECOSS in the revenue  
430 apportionment section of my surrebuttal, which includes a sensitivity for  
431 distribution subfunctionalization.

432

433 c. AMI functionalization

434 **Q. DO INTERVENORS AGREE THAT AMI HAS IMPACTS AT THE**  
435 **PRODUCTION AND TRANSMISSION LEVEL?**

436 A. Yes and no. Kroger Witness Richard Baudino and RMP Witness Meredith  
437 assert that customer metering is not related to production and

438 transmission. On the other hand, DPU Witness Chapman concludes that  
439 AMI-based capacity cost savings will accrue to production and  
440 transmission – though Witness Chapman believes that AMI benefits are  
441 “related predominantly to mitigation of peak loads.”<sup>19</sup> UAE Witness Bieber  
442 argues that changing customer behavior might indeed avoid or defer some  
443 production and transmission investments but that these are hypothetical  
444 savings and therefore do not belong in an ECOSS.<sup>20</sup>

445

446 **Q. HOW DO YOU RESPOND TO THE ABOVE ARGUMENTS?**

447 A. I disagree with Witness Chapman’s statement that AMI benefits are  
448 primarily related to peak load mitigation. AMI enables load shifting when  
449 combined with TOU rates and conservation voltage reduction – both of  
450 which are energy related benefits. Witness Bieber does not counter my  
451 core argument that AMI directly substitutes for P&T and how substitutes  
452 should be treated in an ECOSS. There should be nothing hypothetical  
453 about AMI meters enabling critical peak pricing that lowers demand  
454 requirements by 30 percent.<sup>21</sup> In Section VII, below, I discuss  
455 requirements that will help ensure that the benefits that AMI provides are  
456 tangible and that RMP is held accountable for realizing those benefits.

457

458 **Q. DO INTERVENORS AGREE THAT AMI FUNCTIONALIZATION**  
459 **SHOULD FOLLOW THE “BENEFICIARY PAYS” PRINCIPLE?**

460 A. Yes and no. Witness Chapman and Witness Bieber disagree with my  
461 position that broad electric system beneficiaries should pay for the new  
462 infrastructure, arguing that the customer with the advanced meter – in this  
463 case, residential – will benefit by reducing its own peak demand or  
464 participating in other savings programs. Witness Meredith asserts that if  
465 residential meters should be functionalized differently in recognition of  
466 their contribution to P&T, then so too should large customer meters be  
467 functionalized differently.

468

469 **Q. HOW DO YOU RESPOND?**

470 A. Witnesses Chapman and Bieber focus on how changes to load profiles  
471 attributable to AMI would alter class load profiles and therefore adjust  
472 energy and demand allocations accordingly. The witnesses appear to be  
473 arguing about the identification of the beneficiary and how it should be  
474 reflected in the ECOSSE. However, both witnesses are incorrectly framing  
475 the issue by not addressing that investing in AMI is a substitute for P&T.  
476 The concept of how to deal with cost causation in the context of  
477 substitution is touched in the NARUC Manual in multiple areas.

478 While I use the beneficiary pays principle to explain the concept of  
479 re-functionalizing AMI, one can also view this issue from a cost causation

480 perspective, with its basis in the idea of substitution. The NARUC Electric  
481 Manual states that “to the extent that transmission investment enables a  
482 utility to avoid line losses, some portion of transmission may be classified  
483 as energy related.”<sup>22</sup> This excerpt is explaining how transmission can  
484 substitute for other energy-related assets, such as generation, and that is  
485 why a portion of its costs can be considered energy related. Likewise, AMI  
486 investment is a substitute for production and transmission investments.  
487 These costs are incurred for various reasons, which are represented by  
488 their respective classifications.<sup>23</sup>

489 In fact, the NARUC Manual also says that “it may be possible to  
490 identify some energy component of the cost” of the electric distribution  
491 system.<sup>24</sup> Even 30 years ago, NARUC clearly stated that the distribution  
492 system is demand-related, energy-related, and customer-related.  
493 Functionalizing AMI as production, transmission, and distribution allows  
494 the meter costs to be appropriately classified into energy and demand in  
495 alignment with the cost causation associated with each respective  
496 function.

497 I agree with Witness Meredith that larger, non-residential meters  
498 are also capable of measuring time-varying energy and demand and that

---

<sup>22</sup> National Association of Regulatory Utility Commissioners, Electric Utility Cost Allocation Manual, January 20 (1992). (hereinafter “NARUC Manual”) at 21.

<sup>23</sup> Functionalizing versus classifying AMI differently to reflect substitution is partly a practical one.

<sup>24</sup> NARUC Manual at 21.

499 an argument could be made that the additional cost of that metering  
500 enables demand charges with benefits beyond distribution. Indeed, the  
501 NARUC Manual makes this very point when it says that meters “may also  
502 be classified using a demand component to show that larger-usage  
503 customers require more expensive metering equipment.”<sup>25</sup> My AMI  
504 functionalization recommendation is a logical extension of the argument  
505 made by Witness Meredith and the NARUC Manual.

506

507 d. P&T classification

508 **Q. PLEASE SUMMARIZE THE INTERVENOR REBUTTAL TESTIMONY**  
509 **YOU WILL RESPOND TO REGARDING P&T CLASSIFICATION.**

510 A. Witness Baudino critiques my proposal to classify P&T as 40 percent  
511 demand-related and 60 percent energy-related as having “no basis,”<sup>26</sup>  
512 while Witness Bieber claims that the 40:60 split is “arbitrary” and that I  
513 didn’t provide evidence that it accurately reflects RMP’s P&T.

514 Witness Chapman notes that the “time is approaching” to review  
515 the rule that currently classifies RMP’s P&T costs as 25 percent energy-  
516 related and 75 percent demand-related. Witness Meredith proposes a  
517 COS “collaborative review” after this rate case in which parties can

---

<sup>25</sup> “NARUC Manual at 96.

<sup>26</sup> Baudino Rebuttal at 5.

518 discuss and consider alternatives “that best reflect the current and  
519 evolving status of the electric industry.”<sup>27</sup>

520

521 **Q. HOW DO YOU RESPOND TO THE ABOVE ARGUMENTS?**

522 A. With respect to Witnesses Baudino and Bieber concerns, given the  
523 modern power system transition, my 40:60 proposal is likely to be a  
524 superior subjective split than RMP’s 25:75 proposal.

525 I appreciate that RMP and DPU acknowledged the importance of  
526 reviewing COS methods, including P&T classification, but they are vague  
527 about when that review should take place and they clearly discourage any  
528 consideration in this docket. However, it would be inappropriate to ignore  
529 the effects of the rapidly changing power system on the hugely costly  
530 production and transmission functions. I would echo OCS Witness Michele  
531 Beck’s rebuttal testimony that the PSC should consider the changing  
532 resource mix and its present implications for cost causation when making  
533 its decision on revenue allocation in this case.<sup>28</sup>

534

535 e. Distribution classification

536 **Q. PLEASE SUMMARIZE THE INTERVENOR TESTIMONY YOU WILL**  
537 **RESPOND TO IN THIS SECTION.**

---

<sup>27</sup> Meredith Rebuttal at 9.

<sup>28</sup> Beck Rebuttal at 4.

538 A. In his rebuttal, Witness Chapman reiterates his direct testimony position  
539 that it is “standard approach” to classify FERC account 368 (line  
540 transformers) as partly demand-related and partly customer-related.<sup>29</sup>  
541 Witness Bieber supports Witness Chapman’s recommendation to use the  
542 minimum size or minimum system methods to classify costs in FERC  
543 accounts 364 through 368.

544

545 **Q. HOW DO YOU RESPOND TO WITNESSES CHAPMAN AND BIEBER?**

546 A. In my rebuttal testimony, I extensively disputed the idea that these  
547 methods for distribution classification are standard practice and explained  
548 why they are not reasonable approaches.<sup>30</sup> Intervenors have not provided  
549 any new argumentation in favor of these methods, so my rebuttal  
550 testimony still stands.

551

552 **III. MARGINAL COST OF SERVICE STUDY (“MCOSS”)**

553 **Q. PLEASE SUMMARIZE THE INTERVENOR TESTIMONY YOU WILL**  
554 **RESPOND TO IN THIS SECTION.**

555 A. RMP Witness Meredith identifies my concern with the Company’s decision  
556 to treat portions of distribution poles, conductors, and line transformers as  
557 customer-related, but does not further address this issue. Witness

---

<sup>29</sup> Chapman Rebuttal at 10.

<sup>30</sup> Nelson Rebuttal at 11.

558 Meredith disagrees with my rejection of using a regression to estimate  
559 customer costs, stating that “the Company’s transformer regression has  
560 been well accepted for many years in Oregon and California.”<sup>31</sup>

561

562 **Q. HOW DO YOU RESPOND TO WITNESS MEREDITH?**

563 A. Poles and transformers should not be considered customer related.  
564 Utilities and commissions in MN and NH do not consider transformers or  
565 poles a marginal customer cost.<sup>32</sup>

566 Additionally, using regression as the method for estimating  
567 customer costs is flawed. I have reviewed numerous regressions and  
568 have generally found the approach to be highly susceptible to subjective  
569 data cleaning and regression specification decisions.<sup>33</sup>

570

571 **IV. REVENUE APPORTIONMENT**

572 **Q. PLEASE SUMMARIZE THIS SECTION.**

---

<sup>31</sup> Meredith Rebuttal at 18.

<sup>32</sup> “Marginal Customer-related plant addition costs measure the marginal cost to connect a customer, which includes the current installed cost of a meter and a service.” See Marginal Cost Testimony of Melissa F. Bartos in Docket No. DE 19-064: Liberty Utilities (Granite State Electric) Corp. d/b/a Liberty Utilities Distribution Service Rate Case. April 30, 2019 at 10. See also MN PUC Docket No. 15-1033.

<sup>33</sup> Direct Testimony of Ron Nelson in Docket No. DE 19-064: In the matter of Liberty Utilities (Granite State Electric) Corp. d/b/a Liberty Utilities Petition for Permanent Rate Increase. December 6, 2019. At 58.

573 A. I first respond to rebuttal testimony from Witnesses Bieber and Meredith.  
574 Then I present the OCS' proposed revenue apportionment for this case.

575

576 **Q. WHAT DO YOU RESPOND TO FROM WITNESS BIEBER?**

577 A. Witness Bieber suggests that my decision to wait until surrebuttal to  
578 propose a revenue apportionment was a "strategy" that places other  
579 parties at an unfair disadvantage.<sup>34</sup>

580

581 **Q. HOW DO YOU RESPOND TO WITNESS BIEBER?**

582 A. With such a significant disparity between revenue requirement positions,  
583 an intervenor that proposed a revenue apportionment in direct testimony  
584 would likely update it in surrebuttal.

585

586 **Q. HAS WITNESS MEREDITH CHANGED HIS REVENUE  
587 APPORTIONMENT SINCE DIRECT TESTIMONY?**

588 A. Yes. In his rebuttal testimony, Witness Meredith proposes a new rate  
589 spread midpoint to reflect RMP's revised proposed price increase of \$72  
590 million. Although RMP's updated rebuttal ECOSS shows extremely little  
591 change in the rate of return index amongst the customer classes, RMP  
592 also decided to change the rate spread distribution. RMP raised the

---

<sup>34</sup> Bieber Rebuttal at 7.

593 relative percent increase for the residential class and decreased it for  
594 general service.

595 Specifically, in its initial filing, RMP proposed that the residential  
596 class should have a revenue increase two percentage points above the  
597 rate spread midpoint and that Schedules 6 and 8 should have a revenue  
598 increase one percentage point below the rate spread midpoint.<sup>35</sup> In the  
599 rebuttal filing, RMP proposed that the residential class should have a  
600 revenue increase three percentage points above the rate spread midpoint  
601 and that Schedules 6 and 8 should have a revenue increase two  
602 percentage points below the rate spread midpoint. Schedules 23 and 15  
603 receive no base revenue increase, which is about 0.71 percentage points  
604 lower than the original rate spread. Other than the residential rate  
605 recommendation, the proposal to give Schedule 9 the same increase as  
606 Schedule 11 is completely unreasonable and unexplained. RMP's ECOSS  
607 shows Schedule 9 needing an increase of almost 7% to get to cost, while  
608 Schedule 11 needs under a 5% increase—an almost 50% differential. I  
609 assess this further and demonstrate that RMP appears to be shielding  
610 Schedule 9 from a reasonable rate increase with no explanation. Witness  
611 Meredith explains that this change is in response to the wishes of the  
612 large customers Walmart and Kroger.<sup>36</sup>

---

<sup>35</sup> Meredith Direct at 11-12.

<sup>36</sup> Meredith Rebuttal at 5-6.

613

614 **Q. HOW DO YOU RESPOND TO THIS CHANGE?**

615 A. RMP's updated revenue apportionment appears to be more influenced by  
 616 large customer testimony than by changes to ECOSS results. Without any  
 617 ECOSS based analysis, RMP heeded the "feedback" of a single set of  
 618 customer interests and reduced class responsibility accordingly.<sup>37</sup>  
 619 Claiming "progress toward cost of service," RMP then raised the relative  
 620 responsibility of the residential class, despite their ECOSS demonstrating  
 621 the same relative class performance as in RMP's initial filing.<sup>38</sup> Table 3  
 622 below shows the revenue RMP has proposed to collect from schedules 1,  
 623 6, and 8 under its new rebuttal rate spread compared to what it would  
 624 have collected from those classes if it had maintained its rate spread from  
 625 direct testimony.

626

627 *Table 3: Comparison of RMP's Proposed Rate Spreads \**

	<b>Revenue Change Under Rebuttal Rate Spread</b>	<b>Revenue Change Using Original Rate Spread</b>	<b>Difference</b>
<b>Residential</b>	\$49,059	\$41,753	\$7,306
<b>Schedule 6</b>	\$8,919	\$14,120	-\$5,201
<b>Schedule 8</b>	\$2,513	\$3,979	-\$1,466

628

\*All numbers in \$000

629

---

<sup>37</sup> Meredith Rebuttal at 5.

<sup>38</sup> Meredith Rebuttal at 6.

630 The two, seemingly small, rate spread changes described above  
 631 transfer \$7.3 million, or over 10% of RMP’s entire revenue requirement  
 632 increase, onto the residential class. The magnitude of this shift simply  
 633 cannot solely be justified by the “feedback” from a single set of customer  
 634 interests. This revenue apportionment change should not be approved  
 635 under any circumstances.

636

637 **Q. PLEASE DISCUSS OCS’S PROPOSED REVENUE APPORTIONMENT.**

638 A. The OCS’s revenue apportionment is informed by its proposed revenue  
 639 requirement and proposed ECOSS changes and other scenarios  
 640 discussed below. Table 4 below provides RMP’s rebuttal ECOSS results.

641

642

*Table 4: RMP Rebuttal ECOSS Results<sup>39</sup>*

10	Irrigation	17,699,554	0.83	18,592,249	892,694	5.04%
15	Traffic Signals	802,613	1.26	726,538	(76,075)	-9.48%
15	Outdoor Lighting	1,155,315	1.71	925,620	(229,695)	-19.88%
23	General Service - Small	138,042,124	1.30	121,699,454	(16,342,671)	-11.84%
SpC	Customer 1	31,382,220	0.53	36,562,456	5,180,236	16.51%
SpC	Customer 2	31,485,131	0.47	37,178,521	5,693,390	18.08%
	Total Utah Jurisdiction	1,895,285,918	1.00	1,858,028,809	(37,257,110)	-1.97%

661

662

663

Table 6 demonstrates that the three reasonable ECOSS

664

adjustments discussed in my direct testimony bring the Residential class

665

rate of return index up from 0.84 to 0.97. The Small General Service class

666

continues to pay well above its cost across all modeling assumptions, and

667

the Irrigation class goes from essentially paying its cost of service to

668

slightly under paying. Additionally, the High Voltage General Service class

669

moves from 0.90 to .073 demonstrating the class is far from paying its cost

670

under all modeling assumptions, including RMP's.

---

<sup>41</sup> Workpaper OCS 5.2S

671 Comparing Tables 5 and 6 is interesting because it demonstrates  
 672 how significantly the subjective assumptions made within RMP’s ECOSS  
 673 can impact rate spread. The results of ECOSSs not only vary greatly due  
 674 to subjective assumptions, as demonstrated in my rebuttal testimony but  
 675 they also differ through time.

676

677 **Q. PLEASE SUMMARIZE THE ECOSS RESULTS YOU EVALUATED.**

678 A. Table 7 summarizes the previously discussed ECOSS results, plus RMP’s  
 679 rebuttal revenue requirement ECOSS with OCS’ methodological changes,  
 680 as well as an ECOSS representing the revenue midpoint between OCS  
 681 and RMP’s recommendations.

682

683

*Table 7: ECOSS Scenario Comparison<sup>42</sup>*

Description	Percentage Change from Current Revenues				
	RMP Rebuttal	RMP Rebuttal w/ OCS ECOSS Methods	RMP Rebuttal w/ OCS Revenue	RMP Rebuttal w/ OCS Revenue & ECOSS Methods	Revenue Midpoint w/ OCS ECOSS Methods
Residential	10.98%	5.88%	4.29%	-0.91%	2.15%
General Service - Large	-3.87%	-2.77%	-9.29%	-8.00%	-5.25%
General Service - Over 1 MW	-1.62%	2.29%	-6.64%	-2.61%	0.17%
Street & Area Lighting	-22.95%	-15.79%	-26.60%	-19.95%	-18.07%
General Service - High Voltage	6.92%	12.91%	1.83%	7.95%	10.81%
Irrigation	4.82%	11.53%	-1.05%	5.04%	8.35%
Traffic Signals	-6.30%	-1.92%	-11.68%	-9.48%	-7.14%
Outdoor Lighting	-31.01%	-15.76%	-34.03%	-19.88%	-17.86%

<sup>42</sup> Workpaper OCS 5.3S

General Service - Small	-5.80%	-6.78%	-10.60%	-11.84%	-9.26%
Customer 1	15.19%	22.13%	9.40%	16.51%	19.59%
Customer 2	1.58%	23.41%	-2.73%	18.08%	21.04%
Total Utah Jurisdiction	3.80%	3.80%	-1.97%	-1.97%	0.92%

684

685 **Q. WHAT REVENUE APPORTIONMENT DOES OCS PROPOSE IN THIS**  
 686 **CASE?**

687 A. I propose two approaches to revenue apportionment; one under a rate  
 688 decrease, as recommended by the OCS, and the other under a rate  
 689 increase that represents an approximate midpoint between the OCS and  
 690 RMP.

691

692

*Table 8: OCS Recommended Rate Spread<sup>43</sup>*

Description	Rate Spread	
	OCS Decrease	Mid-Point Revenue
Residential	-0.51%	1.25%
General Service - Large	-3.00%	0.40%
General Service - Over 1 MW	-1.40%	0.60%
Street & Area Lighting	-10.00%	0.00%
General Service - High Voltage*	-0.50%	1.53%
Irrigation	-0.50%	1.28%
Traffic Signals	-8.00%	0.25%
Outdoor Lighting	-10.00%	0.00%
General Service - Small	-9.50%	0.00%
Customer 1	-0.50%	0.92%
Customer 2	-0.50%	0.92%
Rate increase	-1.97%	0.92%
* includes Schedules 31 and 21		

693

---

<sup>43</sup> Workpaper OCS 5.3S

694

695 **Q. WHAT WERE THE PRIMARY FACTORS THAT YOU CONSIDERED TO**  
696 **INFORM YOUR RATE SPREAD RECOMMENDATION?**

697 A. I consider the factors I recommended in direct testimony, such as  
698 gradualism, alongside the various ECOSS and revenue scenarios.<sup>44</sup> As  
699 demonstrated in the Table 8 above, when apportioning the rate decrease,  
700 I ensured that each class shared in the rate decrease. More specifically, I  
701 set a minimum rate decrease at 0.5 percent for classes that were  
702 consistently found to not be paying full cost. Classes that were  
703 consistently found to be paying over cost received at most a 10 percent  
704 decrease. Then I grouped the remainder of the classes above or below  
705 the average decrease based on the results of the OCS ECOSS results.

706 When apportioning a rate increase, I follow a similar process. I  
707 ensured that no class received a rate decrease, while relying more heavily  
708 on the approximately mid-point ECOSS results. Because there is an  
709 increase, I do not give a class a decrease for equity and customer  
710 confusion reasons. I assign Schedule 9 (High Voltage General Service)  
711 the highest rate increase because, for the last 10 years, it has been the  
712 worst performing class and is not paying its costs based on the above  
713 scenarios.<sup>45</sup> It is unclear why RMP does not pay more attention to this

---

<sup>44</sup> Nelson Direct at 56.

<sup>45</sup> See Nelson Rebuttal Table 1 for historical ECOSS results.

714 class' poor performance and instead focuses on increasing residential  
715 rates. Then I group rate increases and decreases closely around the  
716 average increase. These approaches support interclass equity,  
717 gradualism, and help to avoid customer confusion.

718 If the PSC assigns a different rate increase or decrease, I  
719 recommend they proportionally scale my revenue apportionments.<sup>46</sup>

720

721 **V. RATE DESIGN**

722 a. Rate unbundling

723 **Q. WHICH INTERVENORS DO YOU RESPOND TO IN THIS SECTION?**

724 A. I respond to RMP Witness Meredith. The DPU, UAE, and others did not  
725 address unbundling in their rebuttals. This means that the OCS is the only  
726 party that has identified the precedent-setting changes that RMP has  
727 introduced to ratemaking via its unbundling proposal as a significant issue  
728 in this case.

729

730 **Q. PLEASE SUMMARIZE WITNESS MEREDITH'S REBUTTAL ON**  
731 **UNBUNDLING.**

732 A. Witness Meredith correctly characterizes my concerns with the unbundling  
733 proposal: that it enables a dissociation between ECOSS classification

---

<sup>46</sup> Revenue apportionment percentages can be found in Workpaper OCS 5.3S.

734 results and rate design, which allows for significant rate design changes,  
735 including reduced cost collection from volumetric rate components.

736 Witness Meredith does not rebut my direct testimony on the  
737 consequences of the unbundling proposal. He instead diverts attention to  
738 a narrow reason why rate unbundling could be beneficial and whether that  
739 particular application is transparent. Witness Meredith states, for the first  
740 time in this rate case, that the Company's unbundling proposal is intended  
741 to better track the collection of EBA costs. In fact, RMP now claims this is  
742 "probably the most significant reason why the Company wanted to  
743 separate retail rates into fixed and variable supply."<sup>47</sup> To deflect attention  
744 from the methods used and results of RMP's approach, Witness Meredith  
745 explores whether EBA costs are well defined as applied to RMP's  
746 unbundled categories, and claims that rate unbundling will be useful for  
747 developing new clean energy programs.

748

749 **Q. DOES WITNESS MEREDITH DISPUTE YOUR DIRECT TESTIMONY**  
750 **ANALYSIS ON THE IMPACTS OF RMP'S PROPOSED UNBUNDLING?**

751 A. No. Witness Meredith did not deny the facts presented in my direct  
752 testimony showing that RMP's rate unbundling shifts cost collection from  
753 energy to demand related rate components. As a result, Figure 1 of my

---

<sup>47</sup> Meredith Rebuttal at 20.

754 direct testimony remains unrebutted.<sup>48</sup> The figure demonstrates a clear  
755 departure from designing rates on cost-based information from an  
756 ECOSS.

757 RMP does not dispute that unbundling causes a shift away from  
758 volumetric cost collection. Instead, RMP denies that this outcome was the  
759 Company's *plan*.<sup>49</sup> RMP claims that I "misunderstood the Company's  
760 intentions." However, even if RMP's intentions were not to transfer cost  
761 collection away from energy-related and toward demand-related, that is  
762 the result. There is no misunderstanding with respect to the facts of my  
763 quantitative analysis.

764

765 **Q. HOW DO YOU RESPOND TO RMP'S NEW FOCUS ON EBA COSTS?**

766 A. Although the EBA costs were not the stated point of unbundling in Witness  
767 Meredith's direct testimony, RMP's rebuttal is very focused on using EBA  
768 costs to justify the unbundling proposal and to prove that the proposal is  
769 transparent. If tracking EBA costs is suddenly the "main reason" for  
770 unbundling, then I have several concerns about using the EBA as a basis  
771 for rate design.<sup>50</sup>

772

---

<sup>48</sup> "Comparison of cost-based energy to unbundled variable supply rate components."  
Nelson Direct at 69.

<sup>49</sup> "Is it the Company's plan to use unbundling to shift more costs from energy to demand  
and raise the basic charge for residential customers?" See Meredith Rebuttal at 20.

<sup>50</sup> Meredith Rebuttal at 20.

773 **Q. DOES THE EBA SATISFY RATE DESIGN PRINCIPLES AS A PROXY**  
774 **FOR ENERGY RELATED COSTS?**

775 A. No. The EBA does not satisfy rate design principles because it is not a  
776 proxy for energy related costs. Rate design is informed by energy related  
777 costs and the EBA does not include all of these costs.

778 Furthermore, if the EBA were to be used as the kWh measurement,  
779 the costs within the EBA would need to be further evaluated from a rate  
780 design perspective, not just under a cost recovery perspective as they  
781 have been previously. For example, it would not likely be appropriate to  
782 include PTCs within the EBA – lowering energy costs below the variable  
783 cost claimed by RMP. Additionally, as indicated by the ECOSS, kWh rate  
784 should include some P&T related costs to send an efficient price signal.  
785 Basing the kWh off of the EBA will not lead to the same price signals.  
786 Finally, with respect to sending an efficient price signal, it is unclear to me  
787 whether all applicable costs that should be in the EBA are in the EBA.

788

789 **Q. WHY DOES WITNESS MEREDITH ASSERT THE TRANSPARENCY OF**  
790 **EBA COST CATEGORIES?**

791 A. Witness Meredith says that RMP could have named its fixed and variable  
792 unbundled categories “Generation (non EBA)” and “Base EBA”. Witness  
793 Meredith also says that he “do[es] not understand how [I] can claim these

794 categories are not transparent. The costs that are included in the EBA are  
795 very well defined in Schedule 94.”<sup>51</sup>

796 Witness Meredith has misunderstood my concern about  
797 transparency. The fact is that ratemaking has used energy related costs to  
798 inform the kWh rate component for as long as I am aware. RMP is  
799 attempting to move away from this ratemaking approach with no analytical  
800 support other than “RMP recovers these costs in a rider.” Therein lies the  
801 lack of transparency. RMP is attempting to make a precedent setting to  
802 change to ratemaking based on little to no analytical support.

803

804 **Q. IS IT APPROPRIATE TO DESIGN RATES BASED ON A DISTRIBUTED**  
805 **ENERGY RESOURCE (DER) PROGRAM DESIGN?**

806 A. No, it is not. RMP touts that unbundling will help with program design, but  
807 only a small percentage of customers will participate in these programs.  
808 Allowing RMP to design broad customer class rates in a way that is  
809 designed to meet this narrow programmatic goal will likely lead to favoring  
810 RMP-owned resources, as opposed to demand-side or other DERs.

811

812 **Q. WHAT DO YOU CONCLUDE ABOUT RMP’S UNBUNDLING**  
813 **PROPOSAL?**

---

<sup>51</sup> Meredith Rebuttal at 21.

814 A. I maintain my position that the impacts of RMP's unbundling are not  
815 transparent. I quantified those impacts in my direct testimony and Witness  
816 Meredith did not dispute the analysis. The only decipherable response to  
817 my analysis was that "The unbundled rate categories segmented the  
818 different prices, but did not really influence the total price in ... rate  
819 design."<sup>52</sup> Witness Meredith's response is completely subjective—"not  
820 really influenc(ing)" is distinct from did not. Witness Meredith did not  
821 quantify the impact, but I quantified the difference in rate components.

822 The unbundling proposal, which is made possible by RMP's P&T  
823 subfunctionalization step, creates a new and un-vetted rate design  
824 paradigm in Utah. I am not opposed to unbundled rates in principle, but it  
825 must be a transparent process that intervenors can easily understand.  
826 Even in rebuttal, intervenors are misinterpreting or ignoring the mechanics  
827 of RMP's proposal. The PSC should not adopt a ratemaking process that  
828 only RMP says it understands.<sup>53</sup> I strongly urge that the Commission  
829 reject RMP's P&T subfunctionalization and rate unbundling.

830

---

<sup>52</sup> Meredith Rebuttal at lines 466-467.

<sup>53</sup> I am the only intervenor to analyze RMP's proposal from subfunctionalization through to rate unbundling and RMPs suggests that I "misunderstand" its proposal, leaving RMP as the only intervenor claiming to understand this process.

831 b. Interruptible rate pilot

832 **Q. PLEASE SUMMARIZE THE INTERVENOR TESTIMONY YOU WILL**  
833 **RESPOND TO IN THIS SECTION.**

834 A. Witness Meredith asserts that the interruptible pilot is conservatively  
835 priced, is not a discount to large customers, and should not be included in  
836 RMP's IRP. Witness Meredith agrees that the reporting requirements I  
837 recommended in direct testimony are appropriate, but says that they  
838 should not be provided annually, but rather only in a final program  
839 evaluation.<sup>54</sup>

840

841 **Q. HOW DO YOU RESPOND TO WITNESS MEREDITH?**

842 A. I continue to recommend that the PSC require a more comprehensive pilot  
843 framework that would allow RMP to test its pricing and demand response  
844 (DR) pilot more flexibly, while also holding RMP accountable.

845 In RMP's response to OCS Data Request 27.7, RMP also provided  
846 information on other programs that it offers in other states. The information  
847 provided demonstrated that RMP appears to offer superior interruptible  
848 tariffs in other states that offer a suite of options, similar to those  
849 recommended by the DPU. Regardless, RMP offering these as  
850 justifications for price setting in Utah is not persuasive. As is obvious from  
851 the tariffs provided, the services being provided in other states differ

---

<sup>54</sup> Meredith Rebuttal at 56.

852 significantly. For example, the Company's tariffs in Oregon provide longer  
853 interruptible periods, which clearly provides more value.

854 Reporting at the end of a pilot is acceptable, but RMP does not  
855 provide an end date. This omission provides another example of why a  
856 better framework is needed. My other direct testimony recommendations  
857 for pilot design are still applicable.

858 I will also add that my pilot framework recommendations are  
859 consistent with pilot frameworks either in development or approved by  
860 commissions in Connecticut, Hawaii, New York, and Vermont.

861

862 c. Residential rate design

863 **Q. WHAT ISSUES DO YOU RESPOND TO IN THIS SECTION?**

864 A. I respond to RMP's arguments for including line transformers in the  
865 customer charge and RMP's bill impact analysis. I also clarify the OCS'  
866 position on residential rate design tradeoffs.

867

868 **Q. WHY DOES RMP CLAIM LINE TRANSFORMERS SHOULD BE IN THE**  
869 **CUSTOMER CHARGE?**

870 A. Witness Meredith asserts that the cost of line transformers should be  
871 included in the customer charge, making several arguments intended to  
872 show that transformers are largely based on the number of customers. For  
873 example, RMP argues that line transformers "are typically used by a small

874 number of residential customers [and] sized conservatively considering  
875 the maximum peak capacity that the Company expects each home could  
876 use.”<sup>55</sup> RMP also explains that “Volumetric energy usage up or down will  
877 not impact the Company’s cost of providing this service.”<sup>56</sup>

878

879 **Q. HOW DO YOU RESPOND TO WITNESS MEREDITH?**

880 A. RMP’s transformer investments do not solely depend on its customer  
881 count and are in fact impacted by diverse customer usage. In response to  
882 a discovery request, RMP provided its distribution planning criteria, which  
883 states that “service transformers are sized to serve peak coincidental  
884 load.”<sup>57</sup> Coincidental peak load is determined by summing the individual  
885 customer peak demands and multiplying by a coincidence factor. RMP’s  
886 transformers are therefore certainly not “directly related to the number of  
887 customers served,”<sup>58</sup> which is how the NARUC manual defines customer  
888 costs.

889

890 **Q. HOW DO YOU RECOMMEND THAT LINE TRANSFORMERS BE**  
891 **TREATED?**

892 A. I maintain my direct testimony recommendation that line transformer costs  
893 be excluded from RMP’s monthly customer charge.

---

<sup>55</sup> Meredith Rebuttal at 32.

<sup>56</sup> Meredith Rebuttal at 32.

<sup>57</sup> Attachment OCS 27.5 (PacifiCorp DA 411 General-Residential Electrical Demand).

<sup>58</sup> NARUC Manual at 20.

894

895 **Q. DOES RMP INCLUDE A BILL IMPACT ANALYSIS IN REBUTTAL?**

896 A. Yes. Witness Meredith created a new bill impact analysis intended to  
897 address my concern about harmful bill impacts for residential customers  
898 with low consumption. RMP's analysis presents the dollar and percent  
899 price changes under RMP's new rates for residential customers with 12  
900 monthly bills in 2019. Witness Meredith argues that the 10% of customers  
901 with the highest bill increases (\$5.25/month) face only "modestly" higher  
902 increases than the average bill increase (\$2.94/month). According to  
903 Witness Meredith, "the bill impacts for larger residential customers were  
904 larger than this difference" when tiered energy charges were widened.<sup>59</sup>

905

906 **Q. HOW DO YOU RESPOND TO RMP'S BILL IMPACT JUSTIFICATION?**

907 A. Witness Meredith's bill impact analysis appears to suggest that large  
908 customers in the past have faced greater bill increases than small  
909 customers will face under RMP's proposed rate changes in this case.  
910 However, RMP should not be comparing customer bill impacts in absolute  
911 dollar terms, but rather by percent bill change. Analysis with percentage  
912 changes is more appropriate in most cases because it creates a  
913 normalized comparison, while nominal dollars do not. A dollar increase for

---

<sup>59</sup> Meredith Rebuttal at 26.

914 a small customer can represent a much higher percentage bill change  
915 than a dollar increase would represent for a larger customer.

916 The data that RMP provided in rebuttal supports this point. RMP  
917 demonstrates that the \$5.25 price increase for the decile of customers  
918 with the highest price change represents a 5.9% bill increase. Witness  
919 Meredith does not mention that the highest price increase almost certainly  
920 affects the residential customers with the lowest consumption, as shown in  
921 Figure 2 of my direct testimony.<sup>60</sup> Meanwhile, the decile of customers with  
922 the lowest monthly price change – which would be made up of large  
923 customers who consume well over 1,000 kWh, as shown in Figure 2 of my  
924 direct testimony – see a bill decrease of \$3.03, or -2.1%.

925

926 **Q. DOES THE OCS PROPOSE THAT THE COMMISSION PRIORITIZE**  
927 **MITIGATING BILL IMPACTS ON LOW USE CONSUMERS?**

928 A. Yes. The OCS strongly opposes the severity of the bill impacts for low use  
929 customers that will result from RMP's proposals. Together, RMP's  
930 increased customer service charge and transition from three to two  
931 inclining block tiers disproportionately harm customers with lower  
932 consumption, as I demonstrated in my direct testimony. The OCS  
933 supported RMP's two-tier rate proposal in direct testimony under the

---

<sup>60</sup> Nelson Direct at 76.

934 expectation that the RMP would amend its excessive bill impacts for low  
935 use customers.<sup>61</sup> The primary way to do so is to remove line transformer  
936 costs from the customer charge by adopting my recommended customer  
937 charges from direct testimony. A lower customer service charge is critical  
938 for reducing the significant bill impacts on low use customers.

939 RMP did not agree to lower its customer service charge nor  
940 propose any other way to mitigate disproportionate low use customer bill  
941 impacts. If the Commission does not adopt the OCS' customer charge  
942 recommendation, the OCS recommends that the Commission continue  
943 with the three-tier structure to relieve bill impacts for low-usage customers.  
944 The OCS' objective is to create reasonable bill impacts and for that reason  
945 does not support both change to a two-tier and raising customer charge  
946 more than my suggested \$1 increase for single family residential in the  
947 same proceeding.

948

949 **Q. PLEASE SUMMARIZE YOUR RESIDENTIAL RATE DESIGN**  
950 **SURREBUTTAL.**

951 A. RMP has insufficiently defended its subjective decision to include line  
952 transformer costs in the customer service charge. RMP's proposed  
953 customer charge contributes to excessive bill impacts for low use

---

<sup>61</sup> See Witness Anderson Direct Testimony Phase II at 11: "the OCS does not object to moving to a two-tier rate for both summer and winter seasons so long as the overall rate structure and specific rate calculations do not result in the disproportionate increase on low users proposed by RMP."

954 customers, which RMP's rebuttal bill impact analysis does not negate. I  
955 recommend that the Commission accept the OCS' proposal to lower  
956 RMP's proposed customer charge. If the Commission does not do so, it  
957 should instead order RMP to return to a three-tier rate structure to mitigate  
958 RMP's disproportionate rate design impacts on small consumers.

959

960 **Q. HOW DID WITNESS MEREDITH RESPOND TO YOUR**  
961 **RECOMMENDATION THAT THE PSC REQUIRE RMP TO DEVELOP**  
962 **AN ADVANCED RATE DESIGN ROADMAP?<sup>62</sup>**

963 A. Witness Meredith agreed that the "development of a robust plan for future  
964 rate design offerings is a very good idea. However, instead of a roadmap  
965 brought forth by the Company as Mr. Nelson recommends, I think an  
966 inclusive stakeholder process would be preferred so that interested parties  
967 could share their input and collaborate with the Company."

968

969 **Q. PLEASE RESPOND TO WITNESS MEREDITH.**

970 A. I appreciate Witness Meredith's thoughtful response. I agree that a  
971 stakeholder process would add value to an advanced rate design  
972 roadmap. However, I recommend that an advanced rate design roadmap  
973 filing be the first step of the stakeholder process. The advanced rate  
974 design roadmap is necessary before the stakeholder process because

---

<sup>62</sup> Nelson Direct at lines 2024-2076.

975 stakeholders do not have critical information needed to meaningfully  
976 engage in a stakeholder process. For example, Witness Meredith stated,  
977 “AMI is close enough in the future that it does not make sense to launch  
978 new time varying rate options now which would use conventional meters.  
979 At the same time, AMI deployment is also far enough out that designing  
980 specific proposals now would be premature.”<sup>63</sup> This example  
981 demonstrates that RMP has not provided clear information as to when it  
982 will be able to implement advanced rate designs. The timeline for  
983 implementation and additional investments needed for advanced rate  
984 design would be critical components of an advanced rate design roadmap  
985 along with the other components listed in my direct testimony.

986

987 **VII. AMI PROJECT**

988 **Q. WHICH INTERVENOR DO YOU RESPOND TO IN THIS SECTION?**

989 A. I respond to RMP Witness Curtis B. Mansfield, regarding RMP’s proposed  
990 AMI Project and the associated cost-benefit analysis.

991

992 **Q. PLEASE SUMMARIZE WITNESS MANSFIELD’S REBUTTAL.**

993 A. Witness Mansfield addressed my request for the Commission to require  
994 additional process and my critique of RMP’s cost-benefit model.

---

<sup>63</sup> Meredith Rebuttal lines 1261-1266.

995

996 **Q. PLEASE SUMMARIZE AND RESPOND TO WITNESS MANSFIELD'S**  
997 **RESPONSES TO YOUR REQUEST FOR ADDITIONAL PROCESS.**

998 A. Witness Mansfield made numerous claims related to my analysis that  
999 demonstrates ratepayers could use additional information and process to  
1000 ensure that maximum benefits are derived from RMP's investment in AMI  
1001 and other grid modernization investments.

1002 First, Witness Mansfield claims that, because a past process  
1003 intended to "monitor the Company's actions in evaluating smart grid  
1004 technology" was discontinued six years ago, "a similar process ... would  
1005 not be a prudent use of resources." Given that the process Witness  
1006 Mansfield focused on was apparently "evaluating smart grid technology," I  
1007 find the current circumstances significantly different.<sup>64</sup> Under the current  
1008 circumstance, RMP is not evaluating an investment, it is actively making  
1009 an investment decision of several tens of millions of dollars. Nothing is  
1010 hypothetical about RMP proposal to invest millions in AMI so stakeholders  
1011 will be able to focus on RMP's tangible investment plans.

1012 Witness Mansfield goes further to claim that AMI investments could  
1013 be investigated in the integrated resource planning (IRP) or demand-side  
1014 management (DSM) forums. These forums already have extremely  
1015 complex issues for parties to analyze; incorporating AMI and grid

---

<sup>64</sup> Mansfield Rebuttal at lines 74-79.

1016 modernization would be overly burdensome to parties and inconsistent  
1017 with best practices in other states.

1018           Second, Witness Mansfield claims that AMI is a proven technology  
1019 with over 100 million installations throughout the United States. While I  
1020 agree that AMI is a proven technology, its functionalities and associated  
1021 costs vary. While the US has seen 100 million AMI installations, under 7  
1022 million of those installations were done by utilities that followed through to  
1023 provide customers with basic time-of-use (TOU) pricing structures. This  
1024 essentially stranded hundreds of millions of dollars in potential benefits.<sup>65</sup>  
1025 Some utilities make various excuses for not rolling out TOU rates, while  
1026 others, similar to RMP, have not sequenced technological investments in  
1027 a way that allows for timely rollout of TOU rates. For example, Duke  
1028 Energy in North Carolina rolled out AMI meters years ago but did not  
1029 update its meter data management system. To this day, Duke cannot  
1030 implement TOU rates to its residential class as a result. To summarize,  
1031 just because a utility installs an AMI meter does not mean that a ratepayer  
1032 benefits from the installation. For this reason, regulators need to hold  
1033 utilities accountable before and during AMI implementation.

1034           Third, Witness Mansfield disagrees with my suggestion that the  
1035 PSC consider a demand response target or requirement coincident with

---

<sup>65</sup> Amhad Faruqui spoken during day 2 of Brattle's "The Load Flexibility Symposium." October 21, 2020. Available at: <https://www.brattle.com/news-and-knowledge/events/brattle-hosts-symposium-on-load-flexibility-in-the-energy-sector>

1036 any AMI approval. Witness Mansfield claims that the Company “has  
1037 already demonstrated a commitment to evaluating and developing  
1038 demand response programs so a new target or requirement is  
1039 unnecessary,” and provides a list of demand response projects that the  
1040 Company has or is analyzing.<sup>66</sup> RMP’s focus on evaluating, developing,  
1041 and analyzing demand response, as opposed to offering and scaling  
1042 services is why targets or requirements are useful tools for regulators to  
1043 help motivate utilities to provide tangible benefits over a discrete time  
1044 period.

1045 Finally, Witness Meredith rebuts my request for RMP to provide *full*  
1046 Green Button Connect My Data functionality to its customers. Specifically,  
1047 Witness Meredith claims that RMP “currently provides Green Button  
1048 functionality.” However, this statement is extremely misleading, as was the  
1049 discovery provided by RMP on the subject, because having “some” Green  
1050 Button functionality is distinct from providing all Green Button Connect My  
1051 Data functionality. For example, RMP does not appear to provide  
1052 authorized third-party access based on affirmative (opt-in) customer  
1053 consent and control—a key functionality to enable innovation and third-  
1054 party services.<sup>67</sup> The PSC should order RMP to provide *all* Green Button  
1055 Connect My Data functionality.

---

<sup>66</sup> Mansfield Rebuttal lines 109-123.

<sup>67</sup> Mansfield Rebuttal at lines 148-150 notes that information is “available to customers,” suggesting that third-party access is not possible or contemplated.

1056

1057 **Q. PLEASE SUMMARIZE AND RESPOND TO WITNESS MANSFIELD'S**  
1058 **RESPONSES TO YOUR COST-BENEFIT ANALYSIS?**

1059 A. Witness Mansfield's critique of my analysis of RMP's cost-benefit analysis  
1060 ultimately highlights RMP's own failure to respond to stakeholder data  
1061 requests transparently and comprehensively.

1062           Witness Mansfield criticized my analysis for (1) assuming that net  
1063 benefits remain constant and (2) assuming a 20- versus 25-year  
1064 investment life. Witness Mansfield failed to acknowledge that the OCS  
1065 requested RMP's cost-benefit analysis, and that RMP's own analysis  
1066 omitted each of these assumptions.<sup>68</sup> In fact, RMP provided a sparse  
1067 spreadsheet with hard coded numbers with no explanation. I made the  
1068 most reasonable assumptions I could with the information provided. RMP  
1069 has not provided the "detailed financial analysis" reference by Witness  
1070 Mansfield nor has RMP justified its own key assumptions, such as the  
1071 7.5% escalation of net benefits.

1072           My direct testimony should not be interpreted as an exhaustive  
1073 analysis of RMP's cost-benefit analysis. In fact, most of my criticisms on  
1074 RMP's lack of process are directly related to its insufficient cost-benefit  
1075 analysis. Many of these concepts should have been incorporated into the  
1076 study. For example, RMP did not include the undepreciated lives of the

---

<sup>68</sup> See RMP's response to OCS Data Request 5.16 and attachment.

1077 meters that will be retire early. Nor did RMP include billing upgrades  
1078 required to enable TOU rates.

1079

1080 **Q. DID WITNESS MANSFIELD HAVE ANY OTHER CLAIMS?**

1081 A. Yes. Witness Mansfield claimed that my analysis conflicted with OCS  
1082 Witness Donna Ramas. Specifically, Witness Mansfield's states, "as  
1083 acknowledged in the testimony of OCS witness Ms. Ramas, the Company  
1084 began the project in 2018 and has already placed into service  
1085 approximately \$22 million in project costs." Witness Mansfield's claims, in  
1086 his footnote six, that his view is supported in Witness Ramas' direct  
1087 testimony at lines 990-1022.

1088

1089 **Q. HOW DO YOU RESPOND TO WITNESS MANSFIELD'S CLAIM?**

1090 A. I find it to be factually incorrect. The referenced portion of Witness  
1091 Ramas's direct testimony does not state the AMI Project began in 2018  
1092 nor that the Company has placed \$22 million into service. In fact, Witness  
1093 Ramas appears to provide evidence that clearly contradicts Witness  
1094 Mansfield's claim.

1095 Exhibit OCS 22D contains RMP's response to OCS DR 11.1 and  
1096 the associated attachments. Said attachment shows that \$1.2 million was  
1097 included in FERC Account 106 - completed plant not classified in  
1098 December 2018. The attachment also shows that as of the end of the  
1099 base year in this case (i.e., 12/31/19) only \$1,225,650 was included in

1100 plant in service for the project. The response also shows that the during  
1101 2020 (through 6/2020) RMP had booked \$523,829 to FERC Account 106 -  
1102 Completed Plant not Classified for the "AMI-Utah Energy Usage Web."  
1103 This information indicates that some form of *de minimis* AMI investments  
1104 may have begun prior to this proceeding but nothing close to \$22 million  
1105 and not in 2018.

1106 Lastly, Witness Mansfield claimed that I “erroneously state(d) that,  
1107 ‘Due to COVID RMP has delayed the start of the AMI project until the end  
1108 of 2022.’”<sup>69</sup> This is a similar and also false claimed according to RMP’s  
1109 response to OCS Data Request 11.1, which states that, “The Utah  
1110 Advanced Metering Infrastructure (AMI) project was delayed till the end on  
1111 2022 due to cybersecurity concerns, vendor recommended technology  
1112 changes and COVID-19 pandemic related issues. Current forecasts  
1113 project \$27.4 million in capital expenditures and plant placed in service for  
1114 2022.”<sup>70</sup> RMP previously provided information that contradicts the claims  
1115 made by Witness Mansfield.

1116

1117

1118

---

<sup>69</sup> Mansfield Rebuttal at lines 229-230.

<sup>70</sup> See Ramas Direct, OCS Exhibit 22D.

1119 **Q. HOW DOES WITNESS MANSFIELD ATTEMPT TO ASSUAGE**  
1120 **CONCERNS RELATED TO YOUR RECOMMENDATION TO**  
1121 **HOLISTICALLY AND PROACTIVELY ANALYZE RMP'S AMI AND GRID**  
1122 **MODERNIZATION INVESTMENTS?**

1123 A. Witness Mansfield promotes a regulatory approach where the PSC would  
1124 review the costs and benefits associated with discrete projects brought  
1125 forward by the utility.

1126

1127 **Q. HOW TO YOU RESPOND TO RMP'S RECOMMENDATION FOR**  
1128 **PIECEMEAL REGULATORY REVIEW?**

1129 A. Permitting RMP to selectively bring components of a larger grid  
1130 modernization plan forward, as opposed to reviewing a comprehensive  
1131 grid modernization strategy with all required investments, will lead to a  
1132 game of "hide the ball." Regulators will not see a complete accounting of  
1133 the costs of grid modernization nor be able to hold RMP accountable for  
1134 realizing the broad scope of benefits that can be—but rarely are—  
1135 achieved with grid modernization.

1136

1137 **VII. CONCLUSION**

1138 **Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?**

1139 A. Yes.
