Dear Utah Public Service Commission,

20 yrs ago Utah was at the start of the 20 yr drought. People need to get their heads out of the fantasy world they are in. Utah is in a horrible position right now, due to undermining our laws and regulations that were created years ago to stop Corporations, Big Oil, Utility Companies, Mining and Developers etc from destroying the earth. The greed and insanity must stop. Please do the right thing by becoming part of the solution and not the problem. I still have hope that my grandchildren will be able to see the beauty of the planet I have seen, rather than the total destruction that is going on right now. Thank you for your consideration in regards to maybe rethinking what the IRP should include.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Ruth Powers

Dear Utah Public Service Commission,

I remind Commissioners that nuclear power plants come with their own pollution problems: 3 Mile Island and nuclear accidents in Japan and Russia have rendered living sites unusable over extended period of time. Even without accidents, disposing of spent fuel rods and, eventually, of spent power plants themselves create huge waste problems and potential cancer causes.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. Dear Utah Public Service Commission,

So many Utahns are dependent on Rocky Mountain power for their utilities. But our utility companies are not serving us well, when they fail to work against climate change and clean air standards?goals which Utahns clearly desire. We need to be more prescient (and realistic) regarding future restrictions re: carbon output. We also need our corporations to better reflect Utah?s goals for a ?clean energy? future.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah?s future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power?s failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Dear Utah Public Service Commission,

Dear commissioners,

Thank you for this opportunity to weigh in on Utah's energy future. It would be so awesome if we could lead the way in clean, safe energy. Using new nuclear technology does not sound like a safe bet. In my opinion we should be pushing wind and solar and innovation in solar storage and recycling. We definitely should be cleaning up our coal plants to the strictest degree.

And when the time is right we should let that resource be a thing of the past. I hope Utah can get its act together. We have had so many opportunities to make this a great place to live economically as well as a healthy place to live. But I am starting to lose hope.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Nathan Gilbert

Dear Utah Public Service Commission,

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Dear Utah Public Service Commission,

Coal power plants add to the pollution in this state. It was so nice when the air around Price was cleaned up. We have a beautiful state. Let's keep it that way. Explore sources of clean energy. They will pay for themselves eventually and will keep our state one of beauty.

Dear Utah Public Service Commission,

Air quality in the Slat Lake Valley is poor - and the only way to change it is to reduce pollution from major sources as industry and power generation. It's time to eliminate coal as a Utah power source. It's the responsible thing to do.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. Dear Utah Public Service Commission,

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Barbara Komeyli

Dear Utah Public Service Commission,

It is time to be proactive in planning for Utah's future. Our air quality is not acceptable and it is killing us. Please make decisions that capture carbon instead of spewing more into the air.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. Dear Utah Public Service Commission,

Please promote solar and wind, not nuclear and coal. For the sake of our sons and daughters and of the health of the planet. I already have 8 solar panels which supply all my power. Simple. Reliable. Fusion power from the sun.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. Dear Utah Public Service Commission,

During a 1200 year drought RMP proposes horrific solutions for its energy procurement in its 2021 Integrated Resource Plan. Say NO to nuclear and NO to coal! Where is solar and wind and geothermal? Send the plan back for major revision PLEASE!

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Jesse Jorna

Dear Utah Public Service Commission,

Utah is one of the best places for solar in the country and yet a small fraction of our power comes from Solar. We also have excellent areas for wind turbines and yet have almost no wind turbines. It makes no sense that we would want to invest in an experimental nuclear plant which will almost certainly be over budget and late as well as maintain coal plants that are already more expensive than renewables and will continue to become more expensive. From a purely economic perspective a strong focus on renewables is an obvious choice. Beyond the economics renewables provide a much smaller pollution footprint which is better for everyone. Please consider the citizens of Utah and push Rocky Mountain power to come up with plans that make sense for the customer and citizen not just the Rocky mountain power shareholders.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Larry Muench

Dear Utah Public Service Commission,

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. Dear Utah Public Service Commission,

Utah's air quality along the Wasatch front is some of the worst in the world. Nuclear is not the answer ??it is dangerous and there still is not a viable long-term solution to waste.

Solar and wind are both viable options in Utah. Why are they not pursuing these?

Dear Commissioners,

Dear Utah Public Service Commission,

RMP should scrap their current 20-year plan and start over with the objective to move quickly and decisively towards clean safe renewable energy instead of a continuing reliance on a dirty, harmful, fossil fuel and dangerous, unsafe, risky, super expensive, environment-polluting, harmful radioactive waste producing (for which there is no long-term viable method of safe disposal), nuclear power. Investors and nuclear power shy away from being economically responsible for all dangers associated with this technology. That is why typically ordinary citizens are required to pay for the insurance involved in these types of nuclear projects. Nuclear power is among the most expensive forms of power. That includes the damage to those who mine and process the coals needed to produce the fuel for these plants. Typically those people are the disadvantaged. The nuclear power industry often takes advantage of Native Americans who need the money.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Jonathan Jensen

Dear Utah Public Service Commission,

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Dear Utah Public Service Commission,

The 2021 IRP is unacceptable for filing. Rocky Mountain Power fails to take into account the critical need for renewable energy in the future and relies on untested technology for part of the plan. Their thermal plants are currently not in compliance with Clean Air requirements.

Dear Utah Public Service Commission,

Although you have much to consider and after looking at your plan, I believe your energy plan needs more renewable energy ideas and less dependency on older models that are ruining our communities and in a broader sense our world. I would say no to this proposal

Dear Commissioners,

We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Christopher Hall

Dear Utah Public Service Commission,

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Ryan Anderson

Dear Utah Public Service Commission,

Time for all major utilities to start implementing real meaningful changes even if it cost them billions of dollars.. if they don't like it they can let someone else do it retire with all their dirty money. They know no matter what it cost they will make it back plus billions more but just don't care.. WE MUST FORCE THEM!!!

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. Dear Utah Public Service Commission,

To whom it may concern. Times are changing and we need to start thinking outside the usual box. Coal is gone, let's use the natural gas we have and the utilization of other green energy's. I live in Milford Utah and if you want to see how to get green energy come visit. My name is Scott Symond and I'm a city councilman, chairman of the Milford memorial Hospital Board. Please let me know!!!

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

T Mullarkey

Dear Utah Public Service Commission,

REJECT Rocky Mountain Power's 2021 Integrated Resource Plan!

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. Dear Utah Public Service Commission,

Utah's current Government is literally killing it's people because it puts money before health. Corruption is rampant and deep seated, and unfortunately they lie to their own citizens using religion as a blanket to cover their decades long addiction to the fossil fuel industry. Deny the current 20 year plan. Require responsible planning and a commitment to a renewable future.

Dear Commissioners,

Dear Utah Public Service Commission,

Please urge Rocky Mountain Power to support our state and communities by progressing into the 21st century. We are already 22 years in, and these outdated, environment damaging, and atmosphere polluting policies need to be transitioned into energy efficiency. Please do it for the health of Utah families and the entire planet. Thank you.

Dear Commissioners,

The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Joan Turpin

Dear Utah Public Service Commission,

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Dear Utah Public Service Commission,

The plan is backward thinking. It seems to ignore the fact that we are experiencing a drought worse than all others during the past thousand years. Water for cooling needs to be considered as we may not have enough to support our growing population. Also planning on using untested nuclear technology instead of clean power sources like wind and solar and others is fraught with uncertainty and potential radioactive waste problems that we are leaving to future generations to deal with. That is immoral and irresponsible. Our energy future must be solved by us not our grandchildren and their grandchildren. Coal burning needs to stop in this generation for all our sake.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. Dear Utah Public Service Commission,

Rocky Mountain Power's 20-Year Plan recklessly ignores almost every factor except shareholder returns. Relying on an untested and unapproved nuclear technology rather than demonstrated renewable sources cannot be considered a serious plan for the future. It is understood to fail, and in ways that continue to maximize shareholder value at the expense of the public and the environment.

Dear Commissioners,

Dear Utah Public Service Commission,

As a 6th generation Utahn with children and a grandchild, I have watched with alarm as our state leaders and industries risk all of our futures pursuing wealth and power in their energy policies. Air pollution, water issues, wildfires, climate change and global warming, an unprecedented drought and the breakdown of our ecosystems, let alone population explosion. So much to repair, and such a daunting future that requires careful planning to preserve life in Utah for future generations. This is no time to be careless and arrogant.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. Dear Utah Public Service Commission,

Utahns need and deserve clean air. It's crucial for our health and the health of our environment to move as quickly as possible away from burning coal for our energy needs. This 20-year plan does not accomplish this and unnecessarily prolongs coal use over more economical and clean energy sources.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Peter LeFebvre

Dear Utah Public Service Commission,

We need to move to clean energy! Coal plants are not the future. An untested nuclear power plant is NOT what Utah needs or wants! Please reject Rocky Mountain Power's 20-year plan. We need clean air, not the pollution we currently live with.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Dear Utah Public Service Commission,

There is no energy clean resolution without removing dogmatic doctrine on fossil fuels. Clean energy has advanced for enough to be able to pick up the reins. All that requires is good honest humble people in charge of the transition. Coal, and petroleum have been infested with greed for well over a century. We must give the power back to humble intellectuals in order to save our existence on Mother Earth.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. Dear Utah Public Service Commission,

The plan for Utah needs to include much more and less expensive power from solar and wind. Don't include Natrium reactors which have not been approved, and may cost more in the long-run.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Joan Entwistle

Dear Utah Public Service Commission,

NO MORE COAL BURNING

I add multiple megawatts to the grid every year from my home PV system. RMP should be encouraged to invest in clean tech, NOT 19th CENTURY technology.

Dear Utah Public Service Commission,

Personally, I'm fine with the nuclear power option. But I absolutely reject any continued use of coal to power our electricity generation. Instead, invest heavily in solar, wind and storage. We can and we must, for our survival.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. Dear Utah Public Service Commission,

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Kiri Monks

Dear Utah Public Service Commission,

There is no reason to proceed with techniques that hurt our land. We need to abandon coal as a fuel to make electricity.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. Dear Utah Public Service Commission,

The longer we delay the energy transition, the more we will suffer and the more we will be required to sacrifice.

We need to move to proven, low-carbon, inexpensive energy as quickly as possible. Solar and wind fit all those characteristics. But RMP has failed to prioritize those resources on a proper timescale.

Instead, RMP says that it will be relying on new nuclear. During its many decades of development, nuclear has proven to be the most-expensive energy resource, to take long periods of time to build, and to use enormous amounts of water. But we don't have the money, the time, or the water to make nuclear viable as a near-term option for Utah.

We need to make better decisions for our families and our communities.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. Dear Utah Public Service Commission,

Come folks - really! 20 more years of burning coal. You know the effects of burning coal on our communities and our public lands. It's way past time to accelerate the transition to clean and renewable sources of energy.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Steve Knox

Dear Utah Public Service Commission,

We need to stop climate change now, before it is too late. This plan is an "end of the world as we know it" plan! We need to think about what we need to do to help save the world, not ruin it further. It is the only one we have.

Dear Commissioners,

Dear Utah Public Service Commission,

I've lived in Ogden my whole life and this among many other things give me big concern for the environmental impact on this state. This is definitely getting farther from the place I grew up in. Please consider the health of future generations. Environmental issues affect all of us and money can't do anything to buy back better air, water, you name it, once it's polluted. Please consider the impact of this plan!

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Nedra Carroll

Dear Utah Public Service Commission,

Please do not adopt the currently proposed integrated resource system put forth by Rocky Mountain power. It allows for coal burning long into the future while devoting resources to unproven technology rather than increasing the cleaner technologies now in use. They just don't have the good of their customers in mind at all. Please demand more from them.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Dear Utah Public Service Commission,

Wow, in this day of solar clean energy, I find it appalling that anyone would consider staying in the dark ages and continue to burn coal for another 20 years!! Coal is dirty and harms all of our health especially our children?s. Utah needs to set an example, not be the last in caring about our environment!! No to nuclear!!

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah?s future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power?s failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

Dear Utah Public Service Commission,

Climate change is an existential threat. Scientists don't know what atmospheric level of CO2 causes a runaway greenhouse effect, so we must be very careful with adding more carbon into the atmosphere, or the Earth could soon heat up uncontrollably to inhospitable temperatures. Every current decision will affect us for years to come, as building fossil-fuel-burning infrastructure creates a lasting dependence on carbon-intensive fuels. Thus, I ask you to reconsider your planned expansion and continued reliance on coal.

I understand the issues at hand. I know that there will be times without wind or sunshine, so we will need sources of energy that can substitute our power needs at this time. However, I think relying on coal for this purpose is problematic. I support the use of nuclear energy for this reason, but only so long as that technology has been tested to prevent another disaster like Cherynoble. Please make more judicious decisions regarding our future sources of energy.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. Dear Utah Public Service Commission,

I don't often write in or add my name to petitions. However, I am very concerned about our energy use and plans for future growth in Utah. We should be leaders in the nation in how we protect and use our resources, and be able to show we are stewards with integrity and have politicians who are forward thinking and not tied to companies with a lot of clout. I personally do not like how Rocky Mountain Power puts profits before integrity, and short term gains before long term responsibility. I urge you to think carefully about the message you are sending when working with our energy companies and work harder to create careful plans. Thank you.

Dear Commissioners,

Dear Utah Public Service Commission,

Utah needs to plan to move toward clean energy as soon as possible. We cannot plan to delay it by continuing to rely on coal when there are so many cost-effective alternatives. Utah inversion is getting worse and worse, and we need Rocky Mountain Power to be a leader and an example, not a hindrance and embarrassment. Please revise the 20-year and 5-year plans to incorporate wise use of cleaner energy sources and safe, tested, nuclear energy. Utah is counting on you to help keep it clean and sustain it as a great place to live!

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks. Worse yet, Rocky Mountain Power has forced the nuclear project into almost every single planning scenario. What happens when the project runs into inevitable delays and procedural hurdles? What alternative resources would need to be built to replace that capacity in the near term? We do not know, because Rocky Mountain Power has not included that very foreseeable reality into planning assumptions.

Utah's own Electric IRP Guidelines state that an IRP should include a demonstration and analysis as to whether the resources studied are the least-cost/least risk, the modeling assumptions, sensitivity analyses, the types of resources considered and a demonstration that the assumptions used in the study are reasonable. By this standard alone, the Utah Commission should not accept the Rocky Mountain Power IRP for filing. The utility has repeatedly failed to plan for existing and projected Clean Air Act compliance obligations on coal plants. The utility manufactured a recent crisis because of this lack of planning, which required an emergency proclamation from Wyoming Governor Gordon to keep Jim Bridger unit 2 operating in violation of federal law. Now, coal communities and customers must contend with severe uncertainty because Rocky Mountain Power acted irresponsibly by refusing to plan for the foreseeable eventuality of federal air regulations.

Utah needs a plan that prepares us to address the very real challenges facing our state. We need a plan that takes our carbon-constrained economy into account, and accurately represents transition timelines to coal workers and communities. We need a plan that includes consideration of the causes, impacts, and risks of climate change, and prepares Utah for a more resilient future. We need a plan that invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology. Rocky Mountain Power's 2021 IRP fails to reasonably address all of these concerns, and should be rejected.

Thank you for your consideration.

Sincerely,

Silvia Smith

Dear Utah Public Service Commission,

Living in UTAH I see all around me the beauty of the natural environment- I also how it is being threatened by climate change with historic drought exacerbated by greenhouse gases, air quality degradation from fires here and elsewhere and pollution coming from coal fired plants. The plan proposed is a gigantic step backward on commitments to move to renewables and eliminate coal in a reasonable timeframe. And Nuclear? When the technology isn't even proven yet? This will only move the goalposts further away. Please increase your commitment to solar, wind and geothermal. We have plenty of all those here in UTAH.

Dear Commissioners,

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. The current 20-year plan and 5-year Action Plan represent a huge risk for Utah's future and do not reflect my values as a Utah resident. I am deeply concerned that the current IRP ignores critical information and employs wishful thinking on behalf of untested technologies to build an unrealistic energy mix, without any viable contingency plan. Rocky Mountain Power's failure to consider climate change impacts, the continued decline of coal economics, and Clean Air Act compliance requirements for their thermal plants, does not mean those realities do not exist, but rather, that Utah communities will have to face the consequences of inaction unprepared and unsupported by their public utility. We deserve a utility plan that ensures least cost and least risk energy supply that is based in reality, not false solutions.

The Natrium nuclear plant, targeted to be online relatively soon by 2028, is shockingly unsupported in the IRP with no contract or permitting details and no reasonable accounting of costs and risks.
