RMP Response to DPU Data Request 4.10

DPU Data Request 4.10

If the additional investment in these two projects is not approved, will all of the PTCs from Prior Mountain and TB Flats flow through the EBA? If not, what portion of the PTC credits would flow through the EBA and how would that be determined?

Response to DPU Data Request 4.10

If the Company's request for recovery of the incremental revenue requirement associated with the Pryor Mountain wind project and the TB Flats wind project is not approved in this major plant additions (MPA) proceeding, absent an adjustment, the full amount of the production tax credits (PTC) will flow through the energy balancing account (EBA). The Company would make an adjustment in the EBA to ensure proper alignment of the capital costs and the PTC tax benefits. The Company would separately identify all wind projects, or portions of projects, that are not included base rates and make an adjustment to only include the PTC tax benefits associated with wind projects, or portions of projects, whose capital cost are included in rates.
