Rocky Mountain Power Docket No. 22-035-03 Witness: Shayleah J. LaBray

BEFORE THE PUBLIC SERVICE COMMISSION OF THE STATE OF UTAH

ROCKY MOUNTAIN POWER

Direct Testimony of Shayleah J. LaBray - ERRATA

January 2022

1

Q. Please state your name, business address, and position with PacifiCorp.

A. My name is Shayleah J. LaBray. My business address is 825 NE Multnomah Street,
Suite 600, Portland, Oregon 97232. My position is Vice President, Resource Planning &
Acquisitions. I am testifying on behalf of PacifiCorp d/b/a Rocky Mountain Power
(the "Company").

6

Q. Please describe the responsibilities of your current position.

A. I am responsible for aspects of PacifiCorp's resource planning and procurement functions,
which includes the integrated resource plan ("IRP"), structured commercial business and
valuation activities, and long-term load forecasts. Most relevant to this docket, I am
responsible for conducting competitive request for proposal ("RFP") processes consistent
with applicable state procurement rules and guidelines.

12 Q. Please describe your professional experience and education.

13 A. I joined PacifiCorp in September 2001 and assumed the responsibilities of my current 14 position in September 2021. Over this period, I held several analytical and leadership 15 positions within the Company. I have been involved in the IRP process at PacifiCorp 16 since 2016. I have been directly involved in the Company's most recent 2020 All-Source 17 RFP ("2020AS RFP") process and economic analysis supporting a range of resource 18 investment opportunities. Before taking on the responsibilities of my current role, I held 19 analytical and leadership roles in transmission overseeing the Company's transmission annual formula rate and managing transmission contracts, managing state regulatory 20 21 affairs, and developing customer service support systems. I graduated from Robert D. 22 Clark Honors College at the University of Oregon in 2000 and received a Bachelor of 23 Science degree in Business Administration.

Page 1 – Direct Testimony of Shayleah J. LaBray - Errata

24

PURPOSE AND SUMMARY OF TESTIMONY

25 Q. What is the purpose of your testimony?

A. The purpose of my testimony is to provide and explain the information, data, models and analyses used to evaluate the resources for which the Company is seeking a waiver of the significant energy resource approval process. Specifically, I describe the projects selected as a result of the solicitation process approved by the Public Service Commission of Utah ("Commission") in Docket No. 20-035-05.¹ I also explain how the economic benefits of the resources were further validated in the Company's 2021 IRP.

32

Q.

Please summarize your testimony.

33 The Company seeks a waiver of the significant energy resource approval process under A. 34 Utah Code section 54-17-501 for five projects selected through the 2020AS RFP. This 35 solicitation process was approved by the Commission and overseen by an independent 36 evaluator, Merrimack Energy Group, Inc. ("Merrimack") in Utah and an independent 37 evaluator, PA Consulting Group, Inc. in Oregon. The Company used 2019 IRP modeling 38 tools including the System Optimizer ("SO") and Planning and Risk ("PaR") models to 39 evaluate the projects under varying price-policy assumptions. The Company subsequently 40 used the 2021 IRP modeling system, Plexos, as a further validation that the 2020AS RFP 41 final shortlist, including the projects described in detail below, continue to provide 42 customer benefits.

¹ Application of Rocky Mountain Power for Approval of Solicitation Process for 2020 All Source Request for Proposals, Docket No. 20-035-05. Order Approving 2020 All Source RFP (July 17, 2020).

43		SIGNIFICANT ENERGY RESOURCE PROJECTS
44	Q.	Please provide a brief description of the projects for which a Company seeks a waiver
45		of the significant energy resource approval requirement.
46	A.	The Company seeks a waiver for the following significant energy resource additions being
47		procured through either a power-purchase agreement ("PPA"), a battery-storage agreement
48		("BSA"), or a build-transfer agreement ("BTA"), which I will refer to collectively in this
49		testimony as the "Projects":
50		• Boswell Springs Wind PPA (320 megawatts ("MW"))
51		• Cedar Springs IV Wind PPA (350 MW)
52		• Dominguez I Battery Storage Agreement ("BSA") (200 MW)
53		• Green River I & II Solar + Storage PPA (400 MW)
54		• Rock Creek IRock Creek II Wind BTA (400 MW)
55		Except for the BSA, each of the significant energy resource additions is a renewable
56		energy resource under Utah Code Ann. § 54-17-602(10) with a nameplate capacity
57		exceeding 300 MW. The BSA is a significant energy resource that exceeds 100 MW of
58		generating capacity. The term of each of the contracts for purchase of electricity and
59		electric generating capacity exceeds ten years. Rock Creek IRock Creek II will be owned
60		by the Company after construction has been completed. The Projects are scheduled to
61		come online in 2024.
62		2020 ALL SOURCE RFP
63	Q.	Please provide an overview of the 2020AS RFP.
64	A.	The 2020AS RFP sought resources to meet the Company's projected resource need
65		identified in the 2019 IRP and confirmed in the 2021 IRP. Conducting the 2020AS RFP

I

66		was described as action item 2b in the 2019 IRP. Based on the cost-and-performance
67		assumptions for proxy resources in the 2019 IRP, the Company expected that new wind,
68		solar and battery energy storage systems ("BESS") were likely to be the most cost-
69		competitive types of resources offered into the 2020AS RFP. However, bidders could offer
70		proposals for other types of resources (<i>i.e.</i> , natural gas, pumped storage, etc.).
71	Q.	Did the Commission approve the solicitation process used in the 2020AS RFP?
72	A.	Yes. The Commission approved the solicitation process in Docket No. 20-035-05. ²
73		Concerning the Company's solicitation process at issue in that docket, the Commission
74		stated:
75 76 77 78 79 80 81		In addition to the solicitation's inclusivity and extensive, methodical review process, we find the Final Proposed RFP provides a commendably transparent process, providing relatively exhaustive and well-defined requirements to bidders at the same time, in a reasonably clear and concise manner. We conclude this is consistent with both the letter and spirit of the Act and further maximizes the likelihood the process will identify and select resources in the public interest.
82 83	Q.	When was the 2020AS RFP released to the market?
84	A.	The Company filed for and received approval of the 2020AS RFP from the Commission
85		and from the Oregon Public Utility Commission ("Oregon Commission") (Docket No. UM
86		2059). ³ PacifiCorp released the 2020AS RFP to the market on July 7, 2020.
87	Q.	What was the market response to the 2020AS RFP?
88	A.	The 2020AS RFP elicited a robust market response that produced over 28,000 MW of
89		conforming bids with an additional 12,500 MW of bids that did not conform with minimum

² Id.

³ The Oregon Commission has established competitive bidding requirements for certain resource acquisitions by Oregon's investor-owned utilities. *See, In the Matter of the Rulemaking Regarding Allowances for Diverse Ownership of Renewable Energy Resources,* Docket No. AR 600, Order No. 18-324, Appendix A (Aug. 30, 2018). *See also In the Matter of PacifiCorp Application for Approval of 2020 All Source Request for Proposal,* OPUC Docket No. UM2059, Order No. 20-228 (July 16, 2020).

Page 4 – Direct Testimony of Shayleah J. LaBray - Errata

90

requirements set forth in the 2020AS RFP.

91 Q. How did the Company evaluate the bids that were submitted?

92 The first step in the process was identification of the initial shortlist, which PacifiCorp A. 93 made public on October 30, 2020. The initial shortlist included 5,453 MW of renewable 94 resource capacity: 2,974 MW of solar or solar with storage (1,130 MW of battery 95 storage) and 2,479 MW of wind. The initial shortlist also included 200 MW of standalone BESS. PacifiCorp then initiated a capacity factor evaluation 96 process 97 (performed by third-party expert WSP Global). The initial shortlist contained a mix 98 of various ownership structures, including proposals for PPAs, BTAs, and BSAs.

99 Q. Please describe how PacifiCorp selected the final shortlist.

A. Consistent with the bid evaluation and selection process outlined in the 2020AS RFP, the final shortlist selection process was implemented in two phases: the portfolio-development phase and the scenario-risk phase. At the time it conducted this analysis, the Company was using the SO model and the PaR model, consistent with the 2019 IRP and previous IRPs. The SO and PaR models are described in Volume I, Chapter 7 of the 2019 IRP.⁴

105 Q. Please describe the analysis conducted in the portfolio-development phase.

A. The portfolio-development phase identified the least-cost combination of bids using a
 methodology consistent with the approach used to produce resource portfolios in
 PacifiCorp's IRP.

109 First, the best-and-final pricing for each bid was processed and incorporated110 into the SO and PaR models as modeling inputs.

⁴ See PacifiCorp's 2019 Integrated Resource Plan, Docket No. 19-035-02.

Page 5 – Direct Testimony of Shayleah J. LaBray - Errata

111 Second, the SO model was used to develop bid portfolios containing the least-cost 112 combination of bids over a 20-year planning horizon (2019 through 2038). The SO model 113 optimized its resource portfolio selections from all the bids included in the initial shortlist, 114 as well as from all other proxy-resource alternatives used to develop resource portfolios in 115 PacifiCorp's 2019 IRP (e.g., front-office transactions or "FOTs," RFP demand-side 116 management resources, etc.). PacifiCorp did not force the SO model to select any bid or 117 any combination of bids. PacifiCorp initially developed bid portfolios for three price-policy 118 scenarios, which reflect different pairings among three natural-gas price forecasts and three 119 carbon-dioxide ("CO2") price forecasts (i.e., a Low gas / No CO2 "LN", Medium gas / 120 Medium CO₂ "MM", and High gas / High CO₂ "HH").

121 **Q**.

Please describe the scenario-risk phase.

122 The scenario-risk phase of the bid-evaluation process was implemented by evaluating the A. 123 different resource portfolios (those produced when LN, MM, and HH price-policy 124 assumptions were applied) under each of the three price-policy scenarios. This step 125 provides insight as to how each of the three bid portfolios perform under a range of 126 conditions. The Company also performed sensitivities to test bid selections and system 127 costs under alternative market price assumptions, market sale assumptions, and federal tax 128 incentive assumptions.

129 Q. What resources were identified for inclusion on the final shortlist based on the bid 130 evaluation and selection process outlined above?

131 After evaluating a range of potential bid portfolios, and after accounting for bid updates A. 132 resulting from interconnection study results, the Company selected the final shortlist, 133 which includes:

Page 6 – Direct Testimony of Shayleah J. LaBray - Errata

134	• 1,792 MW of new wind capacity
135	• 590 MW as BTAs
136	• 1,202 MW as PPAs
137	• 1,302 MW of solar capacity as PPAs
138	• 697 MW of BESS
139	 497 MW of BESS capacity is paired with solar bids
140	 200 MW is standalone BESS capacity as a BSA
141	The final shortlist includes the following Projects for which the Company seeks a waiver.
142	1. Boswell Springs Wind PPA.
143	The Boswell Springs Wind PPA will set forth the terms and conditions for the
144	Company to purchase up to 320 MW of wind-generated electricity from a facility located
145	in eastern Wyoming. The term of the PPA is 30 years. Approval is required under Utah
146	Code Ann. § 54-17-302 because it is a contract for more than 300 MW of electricity and
147	electrical generating capacity with a term longer than 10 years. ⁵ It is considered a
148	renewable energy source under Utah Code Ann. § 54-17-601(10)(a)(i).
149	2. Cedar Springs IV Wind PPA.
150	The Cedar Springs IV Wind PPA will set forth the terms and conditions for the
151	Company to purchase up to 350 MW of wind-generated electricity from a facility located
152	in eastern Wyoming. The term of the PPA is 30 years. Approval is required under Utah
153	Code Ann. § 54-17-302) because it is a contract for more than 300 MW of electricity and

⁵ While the definition of "significant energy resource" under Utah Code Ann. § 54-17-102(4) includes resources with 100 MW or more of generating capacity, Utah Code Ann. § 54-17-502(1) modifies the resource approval process for renewable energy sources to include only projects with a nameplate capacity of 300 MW or more.

154	electrical generating capacity with a term longer than 10 years. It is considered a renewable
155	energy source under Utah Code Ann. § 54-17-601(10)(a)(i).
156	3. Dominguez I BSA.
157	The Dominguez I Battery BSA will set forth terms and conditions for the Company to
158	purchase up to 200 MW of battery capacity located in northern Utah. The term of the BSA
159	is 15 years. It meets the definition of "significant energy resource" under Utah Code Ann.
160	§ 54-17-102(4)(b) because it is a contract for more than 100 MW of electricity with a term
161	longer than 10 years, and therefore approval is required under Utah Code Ann. § 54-17-
162	302.
163	4. Green River I & II Solar + Storage PPA.
164	The Green River I & II PPA will set forth the terms and conditions for the Company to
165	purchase up to 400 MW of solar generated electricity from a facility located in southern
166	Utah. The term of the PPA is 20 years. Approval is required under Utah Code Ann. § 54-
167	17-302 because it is a contract for more than 300 MW of electricity and electrical
168	generating capacity with a term longer than 10 years. It is considered a renewable energy
169	source under Utah Code Ann. § 54-17-601(10)(a)(ii).
170	5. Rock Creek IRock Creek II Wind BTA.
171	The Rock Creek IRock Creek II Wind BTA will set forth the terms and conditions for
172	the Company to purchase a 400 MW wind generation facility in eastern Wyoming.
173	Approval is required under Utah Code Ann. § 54-17-302 because it the acquisition of new
174	generating capacity of more than 300 MW that has a dependable life of 10 or more years.
175	It is also considered a renewable energy source under Utah Code Ann. § 54-17-
176	601(10)(a)(i).

Page 8 – Direct Testimony of Shayleah J. LaBray - Errata

177 Q. Did PacifiCorp conduct the 2020AS RFP under the oversight of independent
178 evaluators?

A. Yes. PacifiCorp conducted the solicitation process in accordance with the approvals
received from the Utah and Oregon Commissions and with the comprehensive oversight
of two independent evaluators—one retained by PacifiCorp and appointed by the Utah
Commission (Merrimack Energy Group) and one retained by the Oregon
Commission (PA Consulting Group, Inc.).

184 Q. What were the independent evaluators' conclusions regarding the 2020AS RFP?

185 A. Both independent evaluators concluded that the process was fair and transparent, and that
186 the bids selected to the final shortlist were reasonable.

187 Q. Please describe the Utah independent evaluator's conclusions regarding the 2020AS 188 RFP.

A. In its Shortlist Report,⁶ the Utah independent evaluator concluded that the RFP was fair, reasonable, and in the public interest. In particular, the Utah independent evaluator concluded:

- The market response to the RFP was robust and, "Based on the unbelievable
 response from the market it is safe to say that the solicitation process resulted
 in a very competitive process with many more proposals generally submitted
 than the expected requirements by bubble identified by PacifiCorp."⁷
- PacifiCorp engaged the bidders throughout the process in a timely manner
 to ensure that all bidders were treated fairly.

⁶ Application of Rocky Mountain Power for Approval of Solicitation Process for 2020 All Source Request for *Proposals*, Docket No. 20-035-05. Shortlist Report of the Independent Evaluator, Merrimack Energy Group, Inc. (Sept 2, 2021).

 $^{^{7}}$ *Id.* at 74

- All bidders were treated the same, had access to the same information at the
 same time, and had an equal opportunity to compete.
- PacifiCorp implemented its evaluation and selection process consistent
 with its proposed evaluation and selection process as outlined in the RFP in a
 structured and consistent manner designed to result in the selection of a
 portfolio of projects that would result in a least cost solution.
- PacifiCorp subjected all bidders to the same information requirements and
 conducted a consistent evaluation process with all proposals treated equally in
 terms of the evaluation methodology and information required of each bidder.
- The selection process was unbiased with respect to ownership structures,
 i.e., the process did not unreasonably favor bids that resulted in a utility-owned
 resource.

210 Q. Please describe the Oregon independent evaluator's conclusions regarding the 211 2020AS RFP.

- A. In its Closing Report,⁸ the Oregon independent evaluator concluded that the final shortlist
 reflected a diverse portfolio of competitive resources that achieves the resource adequacy
 and least cost goals set forth in PacifiCorp's IRP, based on the following conclusions:
- PacifiCorp's procurement process, scoring methodology and results were
 fair and free of bias across all bids and bidders.
- PacifiCorp applied the rules of the 2020AS RFP in an unbiased manner,
 communicated transparently with the independent evaluators regarding their
 modelling processes and with stakeholders regarding their decisions.

⁸ The Closing Report was filed by PacifiCorp in Oregon Commission docket UM 2059 on June 15, 2021, and is available here: <u>https://apps.puc.state.or.us/edockets/DocketNoLayout.asp?DocketID=22320</u>.

Page 10 – Direct Testimony of Shayleah J. LaBray - Errata

220		• PacifiCorp's bid price scores were on average consistent with
221		the independent evaluator's independent scoring methodology.
222		• PacifiCorp's utilization of an outside consultant, WSP Global, to evaluate
223		wind, solar, and battery storage benefitted stakeholders.
224		• The final shortlist was reasonably aligned with the 2019 IRP preferred
225		portfolio.
226		MODELING ASSUMPTIONS
227	Q.	Besides the analysis discussed above, did the Company use any other information,
228		data, models, and analyses used to evaluate the Projects.
229	A.	Yes. The Company confirmed its evaluation of the 2020AS RFP including the Projects
230		using the more advanced Plexos modeling system implemented for the 2021 IRP, rather
231		than the SO model and PaR that were used in prior IRPs.
232	Q.	Please describe the Plexos model.
233	A.	The Plexos modeling system provides three platforms (referred to as Long-term ("LT"),
234		Medium-term ("MT") and Short-term ("ST")), which work on an integrated basis to inform
235		the optimal combination of resources by type, timing, size, and location over PacifiCorp's
236		20-year planning horizon. The Plexos modeling system also allows for improved
237		endogenous modeling of resource options, greatly reducing the number of individual
238		portfolios needed to evaluate impacts of varying resource decisions.
239	Q.	Please describe how PacifiCorp confirmed its evaluation of the 2020AS RFP using the
240		Plexos modeling system.
241	A.	In its 2021 IRP, filed with PacifiCorp's six state utility commissions on September 1, 2021,

Page 11 – Direct Testimony of Shayleah J. LaBray - Errata

PacifiCorp conducted a variant analysis on the top performing portfolio, P02-MM.⁹ That 242 243 variant analysis, P02d-No RFP, removed all resources from the 2020AS RFP final shortlist, including the Projects, and evaluated the effect of the resulting changes in proxy resources 244 245 and system costs. The present value revenue requirement differential of the P02d-No RFP 246 portfolio compared to the top performing P02-MM portfolio was over \$1 billion higher cost on both an expected and risk-adjusted basis further confirming the benefits to 247 customers of the 2020AS RFP final shortlist, including the Projects. The P02d-No RFP 248 249 portfolio also resulted in higher market reliance risk when the 2020AS RFP resources were 250 removed.

- 251 Q. Does this conclude your direct testimony?
- 252 A. Yes.

⁹ See PacifiCorp's 2021 Integrated Resource Plan, Docket No. 21-035-09
