Dear PSC,

Scientists overwhelmingly agree that climate change is happening and that the leading cause is the burning of fossil fuels. Utah's main electric utility --RMP-- burns a lot. 61% of the energy it produces comes from burning Coal; 24% comes from burning Methane [aka. natural gas].

Because state regulatory practice currently ignores most of the environmental and societal damages linked to RMP's operations, I believe externalities should be incorporated into PacifiCorp's resource planning.

Please consider and approve this request.

Best, Aarushi
