My wife and I live in the Sky Ranch community. We have been planning a 24KW solar array on the roof of our house, including battery storage. We have several quotes but have been waiting for a garage extension project to finish before adding the solar array to our roof. The sudden transfer of power utility by Hurricane City has caused a sizable dilemma for us. The quadrupling of the base power rate (from \$10/month to \$40/month) and the maximum power export of 6Kw have dramatically changed the financial equation for recouping the cost to install power. Furthermore, the maximum solar array limit of 16kW is substantially lower than our planned 24kW system. We had no choice in the change and should be grandfathered in at the rates and limits provided to us when we purchased our house last year and for the rates and limits we were provided for our planned project.
