

Rocky Mountain Power
Docket No. 25-035-06
Witness: Robert M. Meredith

BEFORE THE PUBLIC SERVICE COMMISSION
OF THE STATE OF UTAH

ROCKY MOUNTAIN POWER

Direct Testimony of Robert M. Meredith

June 2025

1 **Q.** **Please state your name, business address, and present position with PacifiCorp**
2 **dba Rocky Mountain Power (“Rocky Mountain Power” or the “Company”).**

3 **A.** My name is Robert M. Meredith. My business address is 825 NE Multnomah Street,
4 Suite 2000, Portland, Oregon 97232. My present position is Director, Regulation.

5 **I. QUALIFICATIONS**

6 **Q.** **Please describe your education and professional background.**

7 **A.** I have a Bachelor of Science degree in Business Administration and a minor in
8 Economics from Oregon State University. In addition to my formal education, I have
9 attended various industry-related seminars. I have worked for the Company for 20 years
10 in various roles of increasing responsibility in the Customer Service, Regulation, and
11 Integrated Resource Planning departments. I have over 14 years of experience
12 preparing cost of service and pricing related analyses for all of the six states that
13 PacifiCorp serves. In March 2016, I became Manager, Pricing and Cost of Service. In
14 March 2025, I assumed my current position.

15 **Q.** **Have you appeared as a witness in previous regulatory proceedings?**

16 **A.** Yes. I have testified for the Company in regulatory proceedings in Utah, Oregon,
17 Wyoming, Washington, Idaho, and California.

18 **Q.** **What is the purpose of your testimony?**

19 **A.** The purpose of my testimony is to present the proposed initial rates for Schedule 100
20 – Community Clean Energy Program – Optional and explain how annual updates for
21 the rates would work.

II. INITIAL SCHEDULE 100 PRICES

23 Q. **What is the Utah Community Clean Energy Program (“Program”)?**

24 A. As discussed in the direct testimony of Company witness Craig M. Eller, the Program
25 provides participants in 19 communities with a clean energy program, under which
26 non-emitting resources will be procured on behalf of participants. Participants will be
27 notified before the commencement date of the Program and have an opportunity to opt
28 out if they wish not to participate. Participants will pay for all of the incremental
29 resource and administrative costs of the Program. To backstop Program costs, reserve
30 funds will be collected from participants to prevent non-participating customers and
31 the Company from incurring incremental costs of the Program.

32 Q. **What is Schedule 100?**

33 A. Schedule 100 is the tariff that will govern the Program. Attachment G to the Initial
34 Application of Rocky Mountain Power to Implement Community Clean Energy
35 Program Authorized by the Community Clean Energy Act contains an initial draft of
36 this tariff which has the terms and conditions of service.

37 Q. **What initial prices does the Company propose for Schedule 100?**

38 A. The Company proposes that the initial prices for Schedule 100 will be 0.6132 cents per
39 kWh plus a \$0.11 per month surcharge to fund low-income assistance credits.

40 Q. **How did the Company determine these prices?**

41 A. The Company developed a model to forecast the charges needed to fund a particular
42 level of renewable procurement for the Program, which considers the incremental cost
43 of the renewable purchase power agreement (“PPA”), the initial startup costs, the
44 ongoing administrative costs, and the necessary reserve fund amounts needed. To fully

45 understand the viability of the Program, the Company modeled the monthly costs and
46 collections under the assumptions it used for a full 24-year period.

47 **Q. What other costs will participating customers incur?**

48 A. Please refer to Eller Workpaper – Program Costs_URC, which shows all other
49 estimated costs the Program will incur.

50 **Q. What assumptions were used in the Company's forecasted Schedule 100 model?**

51 A. The Company made the following assumptions in its forecasted Schedule 100 model:

- 52 • Interest rate of 5.0 percent.
- 53 • Startup costs for the Program of \$820,169.
- 54 • Ongoing administrative costs of \$1,014,847 per year.
- 55 • 20 percent of load for residential customers will opt-out. 70 percent of load for
56 customers on Schedules 6, 6A, 8, 10, and 23 will opt-out. 95 percent of load for
57 customers on Schedules 9, 9A, and 31 will opt-out.
- 58 • Participating load for the first year in 2026 will be 2,816,268 MWh and will
59 increase commensurate with the Company's forecast.
- 60 • The first designated resource for the Program will be a 60 MW solar resource
61 with a commercial operation date of December 1, 2028.
- 62 • A second designated resource for the Program will be a 60 MW solar resource
63 with a commercial operation date of December 1, 2030.
- 64 • Both solar resources will have a PPA cost that is \$10 per MWh higher than their
65 avoided cost value, a capacity factor of 31.9 percent, an annual degradation rate
66 of 0.5 percent, and a term of 20 years.

- 67 • A reserve balance of 12.5 years of the cost of the PPA in excess of the avoided
68 cost value is required one year before each resource's commercial operation
69 date.
- 70 • A reserve balance of five years of the administrative costs is collected in the
71 first Program year.

72 **Q. What periods were assumed for the forecasted Schedule 100 model?**

73 A. To fully understand how the rates, reserve balances, and the incremental environmental
74 benefits of the Program might change over time, the Company's forecast model
75 examined a 24 year period that was broken into three phases: 1) the Build-Up Phase
76 between 2026 and 2029 when reserve balances are collected to support renewable
77 acquisition; 2) the Maintenance Phase from 2030 to 2042 when the ongoing
78 incremental cost of the PPA is funded; and 3) the Draw Down Phase from 2043 to 2049
79 when the reserve balances will be returned to participants. To determine the forecast
80 rates for the Build-Up Phase, the Company determined the price that is needed to
81 collect and build up the necessary reserve balance one year before the commercial
82 operation date of each resource. For the Maintenance Phase, the Company determined
83 the rate that is necessary to recover the incremental cost of the PPA during the time
84 when the Company was neither building up nor drawing down its reserve balance.
85 During the Draw Down Phase, the Company determined the price that would bring the
86 reserve balances down to zero when the last PPA's term is completed.

87 **Q. What is the estimated rate impact of the proposed initial prices for Schedule 100?**

88 A. At the proposed initial prices of 0.6132 cents per kWh plus \$0.11 per month for low-
89 income assistance for Schedule 100, the Company estimates that the impact to a

90 customer's bill would range from 4.8 percent to 9.3 percent depending upon rate
91 schedule and usage based upon rates in effect on March 1, 2025. Residential customers
92 using 675 kWh would see a \$4.14 or 4.8 percent increase to their monthly bills. Exhibit
93 RMP ____ (RMM-1) shows the estimated bill impacts for different rate schedules at
94 different usage levels.

95 **Q. Please describe how rates would change for Schedule 100 over the years given the**
96 **assumptions the Company used.**

97 A. Exhibit RMP ____ (RMM-2) shows how the Company estimates the prices, percentage
98 of incremental renewables that participants could claim, and the overall reserve balance
99 for administration and for the PPAs over the life of the Program.

100 **Q. Do you anticipate that the initial prices will stay the same throughout the expected**
101 **life of the CREA Program?**

102 A. No. The Company estimated how pricing would work under a specific set of
103 assumptions. Those assumptions will almost certainly change over the 24-year period
104 planned for the Program. Opt-outs, the energy usage for participants, renewable
105 production, and the interest rate will vary over time. As discussed in Mr. Eller's
106 testimony, the Company will need to review its Schedule 100 prices annually to reflect
107 the most recent information available.

108 **III. ANNUAL SCHEDULE 100 UPDATES**

109 **Q. Please list all of the factors that could necessitate an annual update of Schedule**
110 **100 prices.**

111 A. Factors that would affect the annual update of Schedule 100 prices include actual load
112 participating in the Program, actual generation from renewable resources dedicated to

113 the Program, count of low-income customers in the Program, the actual administrative
114 costs incurred, and the actual interest earned in the escrow account for the period from
115 the last annual price update through the most recent available month. The Schedule 100
116 price update would also be affected by the forecast load participating in the Program,
117 forecast generation from renewable resources dedicated to the Program, forecast count
118 of low-income customers in the Program, anticipated administrative costs, and the
119 forecast interest from the escrow account for the remaining months in the current period
120 and the next annual period.

121 **Q. What will be the timing of rate filings?**

122 A. Under the assumptions used for the purposes of modeling, the initial Program rates
123 would take effect on July 1, 2026. One year later, the Company would make a filing on
124 July 1, 2027 to change rates effective on November 1, 2027. For each subsequent year
125 during the pendency of the Program, the Company would file on July 1 and request
126 rates effective November 1. This illustrates the timing of the filing, but actual filing
127 dates will be dependent on the date the Commission issues its order approving the
128 Program.

129 **Q. Please describe how the Company will determine the update to Schedule 100
130 prices.**

131 A. The Company will determine the actual balances of the reserve accounts (a reserve
132 account for each renewable resource and a reserve account for administrative costs,
133 including the low-income credit) through April and forecast the balances until the new
134 rate effective date. The Company will then adjust the forecasted reserve balances on
135 the new rate effective date to reflect the difference between the actual reserve balances

136 and the target reserve balances and recalibrate the Program rate to target the necessary
137 reserve funds using the forecasted participation and renewable generation for the 12
138 months following the requested rate effective date.

139 **Q. Did the Company prepare an example calculation that shows how the annual
140 updates would work?**

141 A. Yes. Please refer to Exhibit RMP (RMM-3) for example calculations for three years
142 of annual updates. Pages one and two provide an example for the first year of the
143 Program, showing how the actual participation, administrative costs, and interest will
144 impact the rate necessary to recover ongoing costs of the Program and target the
145 necessary level of reserves. This example assumes the actual participation will closely
146 align with the Company's forecast. Pages three and four demonstrate how the rates will
147 be adjusted on an ongoing basis to maintain the necessary reserves that were collected
148 during the first year of the Program and recover the annual costs of the Program. This
149 example for the second year of the Program demonstrates the role that actual generation
150 from renewable resources plays in the Program rates and, like the first example,
151 assumes a similar level of participation to the Company's forecast model. Pages five
152 through seven for the third Program year provide an example of how low participation
153 in the Program impacts the program rate. Pages five and six assume a steady level of
154 participation as the Program continues. Pages seven and eight recalibrates the program
155 rate assuming many participants opt-out of the Program between November of 2029
156 and November of 2030. This example shows that the Program could withstand a
157 moderate level of opt-out without causing an unreasonable Program rate for
158 participants.

159 Q. Does this conclude your direct testimony?

160 A. Yes.
