Dear Utah Public Service Commission,

I am writing in support of Rocky Mountain Power's application, filed in Docket No. 25-035-06, to implement the Community Clean Energy Program.

As a Utah resident and Rocky Mountain Power customer, I see this new clean energy program as a meaningful step toward a healthier, more prosperous future for our state.

However, I am concerned about Rocky Mountain Power's recent proposals that could undermine the program's success. Rocky Mountain Power wants to undervalue solar, wind, and other energy sources — by about 40% — which would make it harder to build the new projects Utah needs. It's also asking program participants to pre-pay for four years of ongoing administration, adding about \$4 million in excessive upfront costs. Approving these changes will result in a smaller and more expensive program, and Utah could miss out on its last best opportunity to add affordable clean energy this decade. The Public Service Commission now faces a critical decision: whether to approve the Utah Renewable Communities program while ensuring it remains truly affordable for the communities it serves. I urge the Commission to reject RMP's proposals that would undervalue clean energy resources and impose excessive administration costs on participating customers. Approving a fair, community-centered version of this program will help keep electricity rates affordable while advancing Utah's clean energy future.

This program offers Utah the opportunity to diversify energy sources, create jobs, improve air quality, and strengthen energy independence. It will also help support Governor Cox's Operation Gigawatt by adding new power plant capacity at a time when Utah's economy needs it.

We ask that you please approve a version of the program that reflects the priorities of the communities it's meant to serve.

Sincerely,

Linda Zeveloff

Dear Utah Public Service Commission,

By approving the Utah Renewable Communities program, you will give ratepayers the freedom to choose renewable energy, something which RMP is reluctant to provide unless it is completely on their terms and their timetable. Utah ratepayers such as myself want the choice of 100% renewable energy now, and not be locked into inefficient and increasingly costly fossil fuel sources of electricity. I strongly urge you to support the program - thank you!

I am writing in support of Rocky Mountain Power's application, filed in Docket No. 25-035-06, to implement the Community Clean Energy Program.

As a Utah resident and Rocky Mountain Power customer, I see this new clean energy program as a meaningful step toward a healthier, more prosperous future for our state.

Dear Utah Public Service Commission,

As a homeowner, solar customer, and Salt Lake City transplant, making renewable energy more available and affordable for everyone in my community is very important to me. Utah is blessed with being one of the sunniest states (certainly the sunniest landapos;ve ever lived), yet we still rely in large part on coal and fossil fuels which further pollute our air and threaten our health and general quality of life. I find myself looking out every morning to check the air quality based on how clearly I can see the mountains to help me decide how much time landapos;ll let my son play outside that day. Playing outside should be the healthiest way to spend his childhood, yet landapos;m constantly worried about the pollutants and other toxins heandapos;s getting exposed to just by being outside.

Therefore, I am writing in support of Rocky Mountain Power's application, filed in Docket No. 25-035-06, to implement the Community Clean Energy Program.

As a Utah resident and Rocky Mountain Power customer, I see this new clean energy program as a meaningful step toward a healthier, more prosperous future for our state.

However, I am concerned about Rocky Mountain Power's recent proposals that could undermine the program's success. Dear Utah Public Service Commission,

I am a parent of 2, and concerned about climate change. I want my children to experience a healthy environment. I am very concerned about all of the carbon emissions.

I think it's unethical for Rocky Mountain power to be changing its conditions in terms at this time after 19 communities commit.

I am writing in support of Rocky Mountain Power's application, filed in Docket No. 25-035-06, to implement the Community Clean Energy Program.

As a Utah resident and Rocky Mountain Power customer, I see this new clean energy program as a meaningful step toward a healthier, more prosperous future for our state.
