To whom it may concern,

As a resident of Sandy Utah for 45 years, and Salt Lake City prior to that, I would like to express my support for the Utah renewables program. I would like the option to be able to select to use 100% clean energy to power my home without installing personal solar panels. Please consider this option!

Thank you,

Anne Earl

My name is Braden Kellams, and I am a resident of Millcreek, UT.

I am writing in full support of the Utah Renewable Communities Program.

As a condo home owner, I would love the option to power my home 100% with clean energy as a Rocky Mountain Power customer. I otherwise do not have this option being in a condo, and this is an important cause/ option for me.

This is an important step toward developing clean energy infrastructure, empowering consumers to have more choices, and taking care of our environment and public health by lowering emissions.

Please approve this program application so my household can opt in to participate in 2026.

Thank you!
