To: Utah Public Service Commission <psc@utah.gov>

Dear Utah Public Service Commission,

Very achievable and very important for our future!

I am writing in support of Rocky Mountain Power's application, filed in Docket No. 25-035-06, to implement the Community Clean Energy Program.

As a Utah resident and Rocky Mountain Power customer, I see this new clean energy program as a meaningful step toward a healthier, more prosperous future for our state.

However, I am concerned about Rocky Mountain Power's recent proposals that could undermine the program's success. Rocky Mountain Power wants to undervalue solar, wind, and other energy sources — by about 40% — which would make it harder to build the new projects Utah needs. It's also asking program participants to pre-pay for four years of ongoing administration, adding about \$4 million in excessive upfront costs. Approving these changes will result in a smaller and more expensive program, and Utah could miss out on its last best opportunity to add affordable clean energy this decade. The Public Service Commission now faces a critical decision: whether to approve the Utah Renewable Communities program while ensuring it remains truly affordable for the communities it serves. I urge the Commission to reject RMP's proposals that would undervalue clean energy resources and impose excessive administration costs on participating customers. Approving a fair, community-centered version of this program will help keep electricity rates affordable while advancing Utah's clean energy future.

This program offers Utah the opportunity to diversify energy sources, create jobs, improve air quality, and strengthen energy independence. It will also help support Governor Cox's Operation Gigawatt by adding new power plant capacity at a time when Utah's economy needs it.

We ask that you please approve a version of the program that reflects the priorities of the communities it's meant to serve.

Sincerely,

patricia gomes

Hello,

I have been an Utah resident since 1990. I love this state and all that it is...even its quirks and zealotry.

I was so excited when my city, Ogden, was going to be one of the cities in the state to participate in the Community Renewable Energy Program because it is important for a community to be able diversify its energy resources.

Just like a diversified investment portfolio relies on differing asset classes to hedge risk, this program's intent is the same, to reduce our reliability on one energy source.

With rapid the advance of technology and energy needed for such it is more important than ever for a program like this to be adopted.

It saddens me that bureaucrats, politicians and greedy monopolist energy companies and trying to strike down or dilute the effect and intent of this movement.

Please move forward with this program as it was originally intended and honor the wishes and good health of the people in this community.

Regards,

Elliot C. Lewis
