I'm Elizabeth Close, current resident of South Ogden and resident of Utah most of my 71-year life. More importantly, my children and grandchildren live nearby. My interest in clean, renewable energy focuses on ensuring as healthy an environment as possible for my expanding family.

The Wasatch Front's topography makes it prone to natural inversions, which then trap pollutants within the air we breathe. This problem certainly isn't unique to Utah, but the Utah Renewable Communities (URC) Program shows Utah residents are proactive enough to do something about it. Working together to build a better future is nothing new to residents of the Bee Hive State. Let's continue to lead the way with the URC program.

I wish South Ogden were a signatory community under the proposal, but my family will personally benefit from Ogden's involvement. It may not seem fair that I'll reap the benefits of cleaner air without paying the estimated \$3 or \$4 dollar monthly rate increase but I gladly would pay. I expect that rate increase will be offset by the benefits of good health provided by the program.

In closing, I urge the approval of the program as proposed by the URC. Let's continue investing in the best possible future for our Utah families.

Thank you, Elizabeth Close

Good evening

My name is Shelley Hill-Worthen. I am currently a resident of Morgan, but I have lived and worked in the Wasatch Front for the majority of my life. I'm an engineer and architect who has a keen interest in sustainable energy. I'm also a daughter, wife and mother who cherishes my family's long history in Utah.

I am saddened by the continued decline of our air quality and the threat of the collapse of the Great Salt Lake.

When I was pregnant with our son, I developed a severe form of preeclampsia whose incidence increases in areas with severe air pollution. Our son was born 6 weeks preterm. In my late 50's I also developed a rare blood cancer that continues to threaten my life. The statistics also suggest that poor environmental quality can be associated with my cancer. I believe that preservation of Utah's air and water will protect families like mine from health disorders.

You have a fantastic opportunity to support the Community Clean Energy Program today. The program will enable small cities to choose affordable clean energy systems. I wholeheartedly support the program and kindly ask that you vote to support the development of clean energy for our families and our communities.

Thank you

Shelley Hill-Worthen

To: "psc@utah.gov" <psc@utah.gov>

Hello Public Service Commission,

Thank you for considering the Community Renewable Energy Program. I live in Ogden, one of the communities active in the program. I'm excited for Ogden residents to have the opportunity to choose clean, renewable energy!

Poor air quality in Utah has a significant negative impact on quality of life, health and climate and the shift to clean, renewable energy is urgently needed.

The Utah Renewable Communities plan offers customers an affordable choice to supplement current energy mix with renewable clean energy with the potential to shift 25% of the energy produced by RMP in Utah to renewably sourced clean energy.

The potential \$3-4 monthly increase is small relative to the benefits and residents may opt out or seek assistance if this is burdensome. However, RMP's proposal to impose excessive administrative costs and to undervalue clean energy resources will increase the cost and undermine the program's success.

I ask that you approve the program as proposed by the 19 Utah Renewable Communities.

Thank you for your time and for your commitment to ensuring Utah's energy future is clean, reliable, and equitable.

Sincerely,

Tracy Newell

Ogden, Utah

Good morning,

I just wanted to express my support for the URC. I have lived in SLC since 1996 and feel like we have been frontrunners in many ways for pushing for renewable and conservation of energy. Now more than ever that is important so I hope this program gets more and more support.

With climate change rapidly changing our environment, we need to do what we can to keep SLC's environment a healthy one.
