Dear Utah Public Service Commission,

I am writing in support of Rocky Mountain Power's application, filed in Docket No. 25-035-06, to implement the Community Clean Energy Program.

As a Utah resident and Rocky Mountain Power customer, I see this new clean energy program as a meaningful step toward a healthier, more prosperous future for our state.

However, I am concerned about Rocky Mountain Power's recent proposals that could undermine the program's success. Rocky Mountain Power wants to undervalue solar, wind, and other energy sources — by about 40% — which would make it harder to build the new projects Utah needs. It's also asking program participants to pre-pay for four years of ongoing administration, adding about \$4 million in excessive upfront costs. Approving these changes will result in a smaller and more expensive program, and Utah could miss out on its last best opportunity to add affordable clean energy this decade. The Public Service Commission now faces a critical decision: whether to approve the Utah Renewable Communities program while ensuring it remains truly affordable for the communities it serves. I urge the Commission to reject RMP's proposals that would undervalue clean energy resources and impose excessive administration costs on participating customers. Approving a fair, community-centered version of this program will help keep electricity rates affordable while advancing Utah's clean energy future.

This program offers Utah the opportunity to diversify energy sources, create jobs, improve air quality, and strengthen energy independence. It will also help support Governor Cox's Operation Gigawatt by adding new power plant capacity at a time when Utah's economy needs it.

We ask that you please approve a version of the program that reflects the priorities of the communities it's meant to serve.

Sincerely,

Laurel Asplund

Dear Utah Public Service Commission,

The clean energy program can only work if rooftop solar and other renewable retail sources are reimbursed at a rate proportional to the company generation plants. As the system works now, my payment for my solar collectors + the charges I still get from RMP are more than I was paying for their power.

I am writing in support of Rocky Mountain Power's application, filed in Docket No. 25-035-06, to implement the Community Clean Energy Program.

As a Utah resident and Rocky Mountain Power customer, I see this new clean energy program as a meaningful step toward a healthier, more prosperous future for our state.

However, I am concerned about Rocky Mountain Power's recent proposals that could undermine the program's success. Rocky Mountain Power wants to undervalue solar, wind, and other energy sources — by about 40% — which would make it harder to build the new projects Utah needs. It's also asking program participants to pre-pay for four years of ongoing administration, adding about \$4 million in excessive upfront costs. Approving these changes will result in a smaller and more expensive program, and Utah could miss out on its last best opportunity to add affordable clean energy this decade. Dear Utah Public Service Commission,

Blue skies and clean air for all Utahns, please! I hate it when my beloved spouse and son have to struggle to breathe in Salt Lake's smoggy air. Renewable energy projects are vital.

I am writing in support of Rocky Mountain Power's application, filed in Docket No. 25-035-06, to implement the Community Clean Energy Program.

As a Utah resident and Rocky Mountain Power customer, I see this new clean energy program as a meaningful step toward a healthier, more prosperous future for our state.

Dear Utah Public Service Commission,

As a teacher in Granite School District for 26 years and at the University of Utah for 31 years, I had to have two part-time jobs to make ends meet. Even so, my husband and I committed to buy solar panels 8 years ago. We don't buy new cars. We saved up again, and purchased 11 more panels and a battery this year. Increased rates won't hurt us much, but they do hurt our neighbors and children with their own kids. Coal (\$71/MWh) and natural gas (\$45/MWh) are much more than either wind or solar (\$34, \$35/MWh).

Renewables on the East side would generate 20,000 jobs (Current Energy Group Exec. Summary, 2025).

Diverse portfolios reduce cost and increase reliability because of fluctuating markets (Lawrence Berkeley National Lab. (Synapse, 11, 2024).

New discoveries of rare earth minerals in the United States have made solar even more cost effective.

Our national security is better with diverse power generation that is scattered over a large area.

Clean air is important to the climate.

I am writing in support of Rocky Mountain Power's application, filed in Docket No. 25-035-06, to implement the Community Clean Energy Program.

As a Utah resident and Rocky Mountain Power customer, I see this new clean energy program as a meaningful step toward a healthier, more prosperous future for our state.

However, I am concerned about Rocky Mountain Power's recent proposals that could undermine the program's success. Rocky Mountain Power wants to undervalue solar, wind, and other energy sources — by about 40% — which would make it harder to build the new projects Utah needs. It's also asking program participants to pre-pay for four years of ongoing administration, adding about \$4 million in excessive upfront costs.
