To: Utah Public Service Commission <psc@utah.gov>

Dear Utah Public Service Commission,

Many of us have taken it upon ourselves to invest in clean, renewable energy sources like rooftop solar because we know that fossil fuels are literally a "dead end" for all of us. I expect Rocky Mountain Power and PacifiCorp to show the same level of responsibility for a sustainable future. Continuing to embrace coal is a bad move, any way you look at it. It is now more expensive for RMP and thus ratepayers, and delays RMP from taking needed steps forward to remain competitive and relevant. Burning coal enables destruction to environmentally sensitive areas through mining, pollutes our air with increased carbon emissions and impacts the health of all species. Time to get with the 21st century and move on.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

RMP's continued reliance on outdated coal plants and expensive carbon-capture technology is a risk-laden plan that threatens to drive up energy costs.

More than 80% of RMP's requested rate increases in the last two years were due to high coal and gas costs. Meanwhile, Utah stands to gain millions in tax revenue and thousands of jobs by expanding renewable energy, according to a Sierra Club analysis conducted by Current Energy. Yet PacifiCorp's plan moves in the opposite direction.

I urge the PSC to reject costly, high-risk continued reliance on fossil fuels and instead push Rocky Mountain Power and PacifiCorp to prioritize affordable, reliable clean energy that benefits Utah families and businesses. When RMP's pursuit of carbon capture and small-scale nuclear fail to materialize, it will be RMP's customers who pay the price. RMP should be investing in clean energy today, when it is cheapest, not waiting until the 2030s to commit. Utahns shouldn't have to pay more for decisions that benefit corporate shareholders and hurt our communities.

Please advocate for an energy plan that protects ratepayers, public health, and our economic future by rejecting PacifiCorp's current Integrated Resource Plan.

Sincerely,

Katie Pappas

Dear Utah Public Service Commission,

I know you have tried to keep our energy the cheapest possible, but now you are going back to the most expensive source, both for coal miners' health and our environment. I remember seeing the buildings in England in the 1960's, before they were cleaned, that showed the build-up of coal soot on the limestone buildings. With the Salt Lake Valley in the bowl, we cannot stand more coal.

We should be moving to clean energy of solar or wind and now with the battery back-up, that can be constant power that is really reliable if located around the state. There are hardly any days when the sun doesn't shine somewhere over Utah. With AI and bitcoin, we should be adding more transmission lines and production, rather than holding on to antiquated equipment. I know that you own low quality coal mines and are selling yourself coal from those mines, the cost to transport that coal and the cost of the pollution to do so, should have to be added to the total cost. It isn't in the equation you use.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.
