Dear Utah Public Service Commission,

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

RMP's continued reliance on outdated coal plants and expensive carbon-capture technology is a risk-laden plan that threatens to drive up energy costs.

More than 80% of RMP's requested rate increases in the last two years were due to high coal and gas costs. Meanwhile, Utah stands to gain millions in tax revenue and thousands of jobs by expanding renewable energy, according to a Sierra Club analysis conducted by Current Energy.. Yet PacifiCorp's plan moves in the opposite direction.

I urge the PSC to reject costly, high-risk continued reliance on fossil fuels and instead push Rocky Mountain Power and PacifiCorp to prioritize affordable, reliable clean energy that benefits Utah families and businesses. When RMP's pursuit of carbon capture and small-scale nuclear fail to materialize, it will be RMP's customers who pay the price. RMP should be investing in clean energy today, when it is cheapest, not waiting until the 2030s to commit. Utahns shouldn't have to pay more for decisions that benefit corporate shareholders and hurt our communities.

Please advocate for an energy plan that protects ratepayers, public health, and our economic future by rejecting PacifiCorp's current Integrated Resource Plan.

Sincerely,

Jon Hager

Dear Utah Public Service Commission,

Coal is currently \$71/MWh compared to \$34 to \$35/MWh for wind and solar. It creates unmeasured costs to health in the surrounding areas of the power plant, as well as creating more of a blanket around the world with particles that absorb heat and increase the temperature of the climate around the world. We need electricity that is produced in many areas of the state, not concentrated in one place for more reliability and for more security.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

Dear Utah Public Service Commission,

I want to have a livable planet. I have been taught since I was young that one of the most important things we can do is conservation. A key part of conservation is investing in renewable energy sources like wind and solar. This is good for everyone, it is good for everything, it is plainly and unequivocally a good thing to invest in renewable and green energy sources.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

Dear Utah Public Service Commission,

I am one more person suffering from COPD, a lung condition that prevents me from doing many things I would like to do. If diesel equipment is operating near my home I have to stay inside. While I do not have coal filth here directly there are many Utah residents who are in the path of dirty, destructive coal burning plants. Spare them.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

Dear Utah Public Service Commission,

Please improve battery capacity! Coal is not the answer!

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

RMP's continued reliance on outdated coal plants and expensive carbon-capture technology is a risk-laden plan that threatens to drive up energy costs.

More than 80% of RMP's requested rate increases in the last two years were due to high coal and gas costs. Meanwhile, Utah stands to gain millions in tax revenue and thousands of jobs by expanding renewable energy, according to a Sierra Club analysis conducted by Current Energy.. Yet PacifiCorp's plan moves in the opposite direction.

I urge the PSC to reject costly, high-risk continued reliance on fossil fuels and instead push Rocky Mountain Power and PacifiCorp to prioritize affordable, reliable clean energy that benefits Utah families and businesses. When RMP's pursuit of carbon capture and small-scale nuclear fail to materialize, it will be RMP's customers who pay the price. RMP should be investing in clean energy today, when it is cheapest, not waiting until the 2030s to commit. Utahns shouldn't have to pay more for decisions that benefit corporate shareholders and hurt our communities.

Please advocate for an energy plan that protects ratepayers, public health, and our economic future by rejecting PacifiCorp's current Integrated Resource Plan.

Sincerely,

Reed Hansen

Dear Utah Public Service Commission,

Utahns need clean air to breathe. My son has severe asthma, and I most especially want him to breathe outdoors without fear.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

Dear Utah Public Service Commission,

We need to concentrate on renewables. Our world is getting dangerously hot and fossil fuels are a major contributor. Stop supporting coal and invest in renewables. We know coal is more costly to run and worse for the environment and our health.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

RMP's continued reliance on outdated coal plants and expensive carbon-capture technology is a risk-laden plan that threatens to drive up energy costs.

Dear Utah Public Service Commission,

Fossil fuels are more expensive to produce and more harmful to all of us. The power plants in Utah are creating higher costs. RMP needs to invest in renewables and stop raising prices.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.
