Dear Utah Public Service Commission,

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

RMP's continued reliance on outdated coal plants and expensive carbon-capture technology is a risk-laden plan that threatens to drive up energy costs.

More than 80% of RMP's requested rate increases in the last two years were due to high coal and gas costs. Meanwhile, Utah stands to gain millions in tax revenue and thousands of jobs by expanding renewable energy, according to a Sierra Club analysis conducted by Current Energy.. Yet PacifiCorp's plan moves in the opposite direction.

I urge the PSC to reject costly, high-risk continued reliance on fossil fuels and instead push Rocky Mountain Power and PacifiCorp to prioritize affordable, reliable clean energy that benefits Utah families and businesses. When RMP's pursuit of carbon capture and small-scale nuclear fail to materialize, it will be RMP's customers who pay the price. RMP should be investing in clean energy today, when it is cheapest, not waiting until the 2030s to commit. Utahns shouldn't have to pay more for decisions that benefit corporate shareholders and hurt our communities.

Please advocate for an energy plan that protects ratepayers, public health, and our economic future by rejecting PacifiCorp's current Integrated Resource Plan.

Sincerely,

Grace Jencks

Dear sirs: I have been a resident of Utah for my 95 long years and don't want to see Rocky Mountain Power/PacifiCorp dirtying our air by going backwards to burning coal and keeping old mining operations going past their retirement times. I need to breathe clean air and so do all Utahns!!

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

Dear Utah Public Service Commission,

Utah is perfect for solar, wind and geothermal energy - clean energy, much faster to build, and a MUCH lower cost, and therefore MUCH lower prices for consumers. Do what's right for the planet and the consumer. Please.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

RMP's continued reliance on outdated coal plants and expensive carbon-capture technology is a risk-laden plan that threatens to drive up energy costs.

More than 80% of RMP's requested rate increases in the last two years were due to high coal and gas costs. Meanwhile, Utah stands to gain millions in tax revenue and thousands of jobs by expanding renewable energy, according to a Sierra Club analysis conducted by Current Energy.. Yet PacifiCorp's plan moves in the opposite direction.

I urge the PSC to reject costly, high-risk continued reliance on fossil fuels and instead push Rocky Mountain Power and PacifiCorp to prioritize affordable, reliable clean energy that benefits Utah families and businesses. When RMP's pursuit of carbon capture and small-scale nuclear fail to materialize, it will be RMP's customers who pay the price. RMP should be investing in clean energy today, when it is cheapest, not waiting until the 2030s to commit. Utahns shouldn't have to pay more for decisions that benefit corporate shareholders and hurt our communities.

Please advocate for an energy plan that protects ratepayers, public health, and our economic future by rejecting PacifiCorp's current Integrated Resource Plan.

Sincerely,

Lynn Zaritsky

Dear Utah Public Service Commission,

The EBA was 15% of my bill this month. More renewables= less EBA.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

RMP's continued reliance on outdated coal plants and expensive carbon-capture technology is a risk-laden plan that threatens to drive up energy costs.

More than 80% of RMP's requested rate increases in the last two years were due to high coal and gas costs. Meanwhile, Utah stands to gain millions in tax revenue and thousands of jobs by expanding renewable energy, according to a Sierra Club analysis conducted by Current Energy.. Meanwhile, Utah stands to gain millions in tax revenue and thousands of jobs by expanding renewable energy, according to a Sierra Club analysis conducted by Current Energy.. Yet PacifiCorp's plan moves in the opposite direction.

I urge the PSC to reject costly, high-risk continued reliance on fossil fuels and instead push Rocky Mountain Power and PacifiCorp to prioritize affordable, reliable clean energy that benefits Utah families and businesses. When RMP's pursuit of carbon capture and small-scale nuclear fail to materialize, it will be RMP's customers who pay the price. RMP should be investing in clean energy today, when it is cheapest, not waiting until the 2030s to commit. Utahns shouldn't have to pay more for decisions that benefit corporate shareholders and hurt our communities.

Please advocate for an energy plan that protects ratepayers, public health, and our economic future by rejecting PacifiCorp's current Integrated Resource Plan.

Sincerely,

Jared Gifford

Dear Utah Public Service Commission,

Please invest in clean air which will benefit all instead of fossil fuels that pollute our precious air and benefit only your shareholders. We all live on this planet and IN this environment. Invest in everyone's future!

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

RMP's continued reliance on outdated coal plants and expensive carbon-capture technology is a risk-laden plan that threatens to drive up energy costs.

More than 80% of RMP's requested rate increases in the last two years were due to high coal and gas costs. Meanwhile, Utah stands to gain millions in tax revenue and thousands of jobs by expanding renewable energy, according to a Sierra Club analysis conducted by Current Energy.. Yet PacifiCorp's plan moves in the opposite direction.

I urge the PSC to reject costly, high-risk continued reliance on fossil fuels and instead push Rocky Mountain Power and PacifiCorp to prioritize affordable, reliable clean energy that benefits Utah families and businesses. When RMP's pursuit of carbon capture and small-scale nuclear fail to materialize, it will be RMP's customers who pay the price. RMP should be investing in clean energy today, when it is cheapest, not waiting until the 2030s to commit. Utahns shouldn't have to pay more for decisions that benefit corporate shareholders and hurt our communities.

Please advocate for an energy plan that protects ratepayers, public health, and our economic future by rejecting PacifiCorp's current Integrated Resource Plan.

Sincerely,

Dear Utah Public Service Commission,

The doubling down of fossil fuels is evident in our air, especially on the Wasatch front. This pollution is known to cause expensive health issues which is generally not included in the cost assessments for these projects. Wind and solar, conservation and better infrastructure would offer energy while saving our citizens health.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

Dear Utah Public Service Commission,

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

RMP's continued reliance on outdated coal plants and expensive carbon-capture technology is a risk-laden plan that threatens to drive up energy costs.

More than 80% of RMP's requested rate increases in the last two years were due to high coal and gas costs. Meanwhile, Utah stands to gain millions in tax revenue and thousands of jobs by expanding renewable energy, according to a Sierra Club analysis conducted by Current Energy.. Yet PacifiCorp's plan moves in the opposite direction.

I urge the PSC to reject costly, high-risk continued reliance on fossil fuels and instead push Rocky Mountain Power and PacifiCorp to prioritize affordable, reliable clean energy that benefits Utah families and businesses. When RMP's pursuit of carbon capture and small-scale nuclear fail to materialize, it will be RMP's customers who pay the price. RMP should be investing in clean energy today, when it is cheapest, not waiting until the 2030s to commit. Utahns shouldn't have to pay more for decisions that benefit corporate shareholders and hurt our communities.

Please advocate for an energy plan that protects ratepayers, public health, and our economic future by rejecting PacifiCorp's current Integrated Resource Plan.

Sincerely,

Stanford Neering

Dear Utah Public Service Commission,

Please stop burning fossil fuels. Our air quality inn the Salt Lake Valley is already terrible and we don't need to add more pollution to that. Please consider how you want to leave the earth for your grandkids.

Dear Utah Public Service Commission,

When will you get into the 21st Century??? Renewable Energy should be the way. Coal and gas should be a thing of the past! Maybe a new Board of Directors is needed..... those who care about the future of the earth and the health of all of us.....not lining their pockets with old, tired very expensive methods. DO THE RIGHT THING! Get away from coal and gas.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

Dear Utah Public Service Commission,

As a biologist in natural resources, this plan is the way we go backwards, fall behind on power technology from the rest of the world, drive up costs for people (the majority of residents and communities) that are already struggling, and harm existing fragile ecosystems. If you've looked outside or commuted to work recently, you'll see the inversion/pollution problem is already huge. Please look for clean sources of power. Do not take advantage of us.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

To: Utah Public Service Commission <psc@utah.gov>

Dear Utah Public Service Commission,

Expand renewable energy in your IRP. Don't rely on outdated energy forms and resources that create so much pollution in the air, that is LITERALLY poisoning our children and giving them respiratory problems. Please??

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

RMP's continued reliance on outdated coal plants and expensive carbon-capture technology is a risk-laden plan that threatens to drive up energy costs.

More than 80% of RMP's requested rate increases in the last two years were due to high coal and gas costs. Meanwhile, Utah stands to gain millions in tax revenue and thousands of jobs by expanding renewable energy, according to a Sierra Club analysis conducted by Current Energy.. Yet PacifiCorp's plan moves in the opposite direction.

I urge the PSC to reject costly, high-risk continued reliance on fossil fuels and instead push Rocky Mountain Power and PacifiCorp to prioritize affordable, reliable clean energy that benefits Utah families and businesses. When RMP's pursuit of carbon capture and small-scale nuclear fail to materialize, it will be RMP's customers who pay the price. RMP should be investing in clean energy today, when it is cheapest, not waiting until the 2030s to commit. Utahns shouldn't have to pay more for decisions that benefit corporate shareholders and hurt our communities.

Please advocate for an energy plan that protects ratepayers, public health, and our economic future by rejecting PacifiCorp's current Integrated Resource Plan.

Sincerely,

Conner Schacherer

Dear Utah Public Service Commission,

We need alternatives that pollute less for our energy needs. Support those causes and stop enabling corporate interests to take us back to coal and fossils fuels.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

RMP's continued reliance on outdated coal plants and expensive carbon-capture technology is a risk-laden plan that threatens to drive up energy costs.

More than 80% of RMP's requested rate increases in the last two years were due to high coal and gas costs. Meanwhile, Utah stands to gain millions in tax revenue and thousands of jobs by expanding renewable energy, according to a Sierra Club analysis conducted by Current Energy.. Yet PacifiCorp's plan moves in the opposite direction.

I urge the PSC to reject costly, high-risk continued reliance on fossil fuels and instead push Rocky Mountain Power and PacifiCorp to prioritize affordable, reliable clean energy that benefits Utah families and businesses. When RMP's pursuit of carbon capture and small-scale nuclear fail to materialize, it will be RMP's customers who pay the price. RMP should be investing in clean energy today, when it is cheapest, not waiting until the 2030s to commit. Utahns shouldn't have to pay more for decisions that benefit corporate shareholders and hurt our communities.

Please advocate for an energy plan that protects ratepayers, public health, and our economic future by rejecting PacifiCorp's current Integrated Resource Plan.

Sincerely,

Kristopher Toll

Dear Utah Public Service Commission,

Commit now to clean energy, RMP!! Our air already sucks. Many of us here have lung issues and are looking forward to cheaper, cleaner wind and solar energy. Get rid of coal and shale. Carbon recapture is crazy. Get with the modern era!! PSC, do your job!!!

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

RMP's continued reliance on outdated coal plants and expensive carbon-capture technology is a risk-laden plan that threatens to drive up energy costs.

More than 80% of RMP's requested rate increases in the last two years were due to high coal and gas costs. Meanwhile, Utah stands to gain millions in tax revenue and thousands of jobs by expanding renewable energy, according to a Sierra Club analysis conducted by Current Energy.. Yet PacifiCorp's plan moves in the opposite direction.

I urge the PSC to reject costly, high-risk continued reliance on fossil fuels and instead push Rocky Mountain Power and PacifiCorp to prioritize affordable, reliable clean energy that benefits Utah families and businesses. When RMP's pursuit of carbon capture and small-scale nuclear fail to materialize, it will be RMP's customers who pay the price. RMP should be investing in clean energy today, when it is cheapest, not waiting until the 2030s to commit. Utahns shouldn't have to pay more for decisions that benefit corporate shareholders and hurt our communities.

Please advocate for an energy plan that protects ratepayers, public health, and our economic future by rejecting PacifiCorp's current Integrated Resource Plan.

Sincerely,

Cheryl Harris

Dear Utah Public Service Commission,

It makes NO SENSE, to continue investing in DIRTY coal!! I want a clean energy plan.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

Dear Utah Public Service Commission,

We retired folks on a LOW fixed income are already stretched thin trying to make ends meet without additional energy costs being raised. We cannot pay for rising food Costs along with rising energy bills too! Vote NO on this, and vote YES on Clean Green Energy sources, like geothermal, instead! Thank you.

Dear Utah Public Service Commission,

As a life-long native, Utahn, I believe Utah is the most uniquely diverse in geography and also one of the most beautiful in breathtaking earth formations. Yet, we shockingly seem to be the most ignorant in environmental issues, and more likely than most to destroy the natural beauty that surrounds us. We seem to be, generally, a use-and-abuse people, which makes zero sense to me. Could it be that we tend to elect politicians that are the very worst as to environmental issues. I am sick of our corporate energy stranglehold. PLEASE reject PC and RMP plan to further trash our beautiful home.

I am writing to express my concerns about Rocky Mountain Power's 2025 Integrated Resource Plan. This plan prioritizes costly, harmful technologies while reversing plans to invest in clean, affordable energy, leaving Utah ratepayers to bear the financial and health burdens.

RMP's continued reliance on outdated coal plants and expensive carbon-capture technology is a risk-laden plan that threatens to drive up energy costs.
