To: "psc@utah.gov" &lt;psc@utah.gov&gt;

As the owner of a condominium in Salt Lake City and as an avid skier for nearly 65 years, I am writing to you to push for a change to the sources of the power being provided by Rocky Mountain Power in Utah.

It should be obvious to anyone who is paying attention that the continued use of fossil fuels for power generation has impacted the states billion dollar plus ski industry and its continued use will likely impact the 2034 Winter Olympics in an adverse way.

It would be an absolute disaster for those who currently have the ability to change the current trajectory to look back from a snowless 2034 Olympics and say that we wish we had acted while there was still time.

Utah has an abundance of renewable sources of power, all it takes is the will to act. Now is the time.

Thank you

Chris Auer

Clean energy is inexpensive compared to gas and coal, no doubt. Countries and communities that adopt it will thrive. Others will pay a much higher cost for energy putting a brake on growth.

Please take the time to read Jeremy Grantham's articles. He's a climate realist and objective, and, as a result, a very successful investor.

Thinking Outside the Box: How and Why to Invest  
in a Climate Change Strategy

Good luck with your decisions on our next 20 year RMP plan.

You are in a very powerful position, able to correct the power company's catastrophic plans to ignore global warming, present and future. Clearly science has demonstrated over several years the danger of relying on fossil fuels. Utah has an amazing opportunity to expand and foster safe, and effective renewable energy. Also worth noting is the fact that foreign wars don't affect transportation of LNG, etc. Solar and wind will be there without disruption.

Please consider the future for our children and grand children.

Sincerely, Beverly Boyce

To: psc@utah.gov

You just released your 20 year plan and didn't include new clean energy. We NEED it. Our winters are dying. Wind and solar are cheaper than constantly mining coal or natural gas, and at least nuclear is better for the environment.

We NEED you to do better.
