## Rocky Mt Power updated energy plan

I read about Rocky Mt updated 20 year energy plan and am horrified that it leans into energy produced by fossil fuels instead of renewables. I realize that Utah mines coal and drills for oil and natural gas but we also have a tremendous amount of solar potential as well as excellent energy possibilities from geothermal and wind. Why are we stuck in the polluting energy sources of the past? Energy sources that contribute to global warming and pollute the air? Even a small, relatively poor nation like Morrocco gets over 40% of its energy from solar. We should also be moving forward by switching as fast as possible to renewables. This 20 year "updated" energy plan should be rewritten to accommodate cleaner, cheaper energy sources. The public service commission needs to reject the current proposal and have it rewritten to reflect a clean future for our state.

Please consider the next generation of Utah residents as you look at RMP's energy plan. Is this the best option? Is it cost effective? Does it reflect where energy is going, not where it's been?

Global warming is hitting us with a sledge hammer. The driest winters, the hottest summers, the worst air, wildfire smoke and fossil fuel pollution. Solar is least expensive. RMP's energy plan reflects none of it.

Please consider. Thank you,

Tay in Salt Lake City

To: psc@utah.gov

To say we are at a crossroads concerning our energy needs is a comical understatement. The idea that RMP is even entertaining the idea of continuing to use fossil fuels as a primary source of supplying said energy is indefensible, in the USA and, more specifically Utah. As Great Salt Lake evaporates before our eyes and Utah has the dubious distinction of the most polluted air nationally or further, it is impossible to ignore the need for cleaner sources of energy. These sustainable sources are readily available and are becoming, or already are, a more cost efficient way to supply our energy.

As a concerned citizen of the human race, and Utah, I implore this Utah Public Service Commission to reject RMP's current updated energy plan.

Thank you in advance for considering this request.

Sincerely,  
Celia Rose
