Please make RMP include more renewable energy in its long term planning and not rely on dirty energy like coal. Utah needs cleaner energy. Thank you

RMP's energy proposal

1 message

Executive Director <director@logannature.org>

To: psc@utah.gov

I cannot urge you strongly enough to oppose Rocky Mountain Power's new energy proposal. From an environmental perspective, it is a disaster. By choosing to not invest in a green energy future, you would literally be dooming your children and grandchildren to suffer the consequences. Green energy is available, more affordable than traditional energy sources, and better for our health - not investing in it makes zero sense.

However, you must also consider the economic perspective here. Climate change is real and we are smart and capable enough as humans to address it. But by choosing not to, we also doom our economy in Utah that depends on a healthy environment. Loss of snow, dirty air, and the death of GSL would also be a death knell for our economy. Like it or not, the economy is moving to green energy. While most green energy technology was originally invented in the US, we have allowed other countries to outpace us in the last decade and we have lost our standing as an economic leader on the technology of the future. We cannot continue to let that happen. If you care about jobs in Utah, we should be investing more, not less, in green energy. Investment from RMP could directly lead to more innovation and more jobs in green energy - good paying, long term, and future looking jobs. If you choose to support RMP's plan to not add more green energy, you are killing the future economy.

Whether we want it to or not, whether those in power agree or not, the world is moving to green energy and climate change is real. RMP must follow suit. We as citizens have no free market when it comes to our energy choices in Utah. We cannot choose to invest in another company as RMP has a monopoly. So the only hope we have is you to not allow this terrible, short sighted, and dangerous plan to go through.

Renewables in Our State portfolio

1 message

Sarah Woolsey <sarahwoolsey@gmail.com>

Dear colleaegues,

Please ensure that at least 1/3- 1/2 of Utah's portfolio includes renewable energy investment. As a citizen that has long benefitted from personal solar energy at my home, who has learned from recent events that Geothermal is a high potential for Utah, and watching states around us dive into solar, I agree with many that we need lots of renewables to take Utah to the next century. I am not sure of the place nuclear holds as the water needed to cool the current technology is too much. BUT I know we are well placed for solar, wind, and geothermal.

Let's mix the portfolio,

thank you

I am strongly opposed to RMP's long-term energy proposal.

It relies too heavily on fossil fuels. Utah has abundant solar, wind and geothermal resources; we must transition away from climate damaging fossil fuels.

This proposal is detrimental to the environment and the people of Utah. No, no, no!

Dear Public Service Commission:

Like many other Utahns, I was shocked by the short-sightedness of Rocky Mountain Power's so-called "long term energy plan." I count on you to represent the public by rejecting this plan and forcing RMP to make a realistic plan that reduces carbon dioxide emissions and makes use of Utah's vast potential for solar and wind energy.

To: psc@utah.gov

Dear Sirs,

I am writing to oppose the proposal coming before you from RMP. The reliance on Fossil fuels for electricity production is a blatant bid for increased shareholder profits over consumers and the environment's health . And to make matters worse, many cities, including Millcreek where I live, are beginning to opt residents into a program that requires me to pay \$4 per month to help RMP get power from cleaner sources! I will be opting out ASAP as I find it galling to be asked to pay a monopoly to do what they should be doing in the first place. The PSC is the only restraint consumers have in Utah as we are forced to deal with a behemoth monopoly like RMP. Please reject this plan they are putting before you. Thank you for your consideration.

To: Utah's Public Service Commission

I oppose your current long term energy plan.

Please add more and meaningful wind and solar projects so as to redirect your planning to eventually stop relying on fossil fuels for the energy needs of Utah..

Sincerely,

Lauren Florence, MD

Public Comment: Opposition to Rocky Mountain Power's 2025/2026 Integrated Resource Plan (IRP)

1 message

Greg Goddard <ggoddard@gmail.com>
To: "psc@utah.gov" <psc@utah.gov>

Sun, May 3, 2026 at 4:46 PM

Dear Commissioners,

I am writing as a resident of Salt Lake City to formally express my opposition to the current long-term energy proposal submitted by Rocky Mountain Power.

As an avid skier, I have a deep personal and stake in the future of Utah's climate. Our state's world-class winter recreation isn't just a hobby; it is a vital part of our local economy and a primary reason many of us choose to call Utah home. I am deeply concerned that Rocky Mountain Power's plan doubles down on fossil fuels and coal, which directly contributes to the warming trends and erratic weather patterns threatening our snowpack and the longevity of our ski seasons.

I am asking the Commission to reject this proposal for the following reasons:

- **Protection of Natural Resources:** We need a plan that aggressively transitions to wind and solar to mitigate the environmental impact on our mountain ecosystems.
- **Economic Stability:** Protecting "The Greatest Snow on Earth" is essential for the thousands of jobs and billions in revenue that the winter sports industry brings to Utah.
- **Air Quality:** Shifting away from coal is a necessary step in addressing the air quality issues that plague our valleys during the winter months.

I urge the Commission to hold Rocky Mountain Power accountable and demand a revised plan that prioritizes sustainable, clean energy over continued reliance on outdated carbon-intensive sources.

Thank you for your time and for considering the future of Utah's environment and economy.

Sincerely,

Greg Goddard
