Docket No: 25-035-52. Utah Clean Energy's Request for Expedited Investigatory Docket and Agency Action
9/13/2025

Tom Moyer: Co-state coordinator, Citizens' Climate Lobby

Dear Commissioners -

I write in support of Utah Clean Energy's request for agency action. Energy production is key to Utah's strong economic growth, and Utah's energy demand is rising. New data centers, a growing population, a strong economy, and increasing electrification all point in the direction of higher electricity demand - while at the same time older generation assets pose an increasing risk of retirement or lengthy maintenance events. It is a given that new generation will be needed in the state. Much of this new electricity generation will be supplied by wind, solar, batteries, and geothermal regardless of whether it happens this year or over the next decade. It is clearly in Utah's interest and in the ratepayers' interest to begin construction as soon as possible on those assets to take advantage of federal tax credits before they expire. I hope that you'll consider granting the request for expedited action to benefit from those cost savings.

Thank you very much,

- Tom Moyer

To whom it may concern,

My name is Bill Barron and I am a Network Director for Citizens' Climate Lobby and am commenting as an individual regarding Docket No: 25-035-52 Utah Clean Energy's Request for Expedited Investigatory Docket and Agency Action.

HR1 and new US Treasury guidance have created new restrictions and abbreviated timelines for clean energy projects to qualify for the clean energy tax credits. I request that you consider rapid project approvals so that Utah can meet tax advantaged project deadlines defined by HR1. This would offer significant savings to ratepayers and help Utah support Gov. Cox's Operation Gigawatt initiative as part of an all of the above energy strategy.

Best, Bill
