Dear Utah Public Service Commission,

As your constituent, I urge you to ensure PacifiCorp saves Utah customers billions of dollars by seizing the opportunity to procure clean-energy resources before federal Inflation Reduction Act tax credits expire.

If PacifiCorp delays, our state will still need new resources, but they will cost at least 30% more -- forcing families and businesses to shoulder billions in unnecessary costs.

Clean energy leads to lower bills. And building solar and wind here in Utah strengthens energy abundance, security, and reliability. It keeps us from relying on volatile fossil-fuel markets, makes our grid more resilient to extreme weather, and ensures that Utah isn't left behind while neighboring states secure billions in savings.

The Aug. 29 filing by Utah Clean Energy before the Utah Public Service Commission shows the scale of potential benefits – over \$150 million in savings for every 100 MW of solar and \$210 million for every 100 MW of wind built. PacifiCorp's 2025 Integrated Resource Plan already identifies the need for 668 MW of solar and 744 MW of wind by 2031. That adds up to over \$2.5 billion in savings by capturing currently available tax credits for wind and solar. What's more, solar and wind bring down fuel costs that have driven PacifiCorp's most recent double-digit rate-increase requests. The only question is whether PacifiCorp will act in time to secure these resources at the lowest possible cost or delay procurement until the tax credits expire.

Please urge the Public Service Commission to accept the Utah for Clean Energy petition to open an investigation into why PacifiCorp has not yet acted to procure these resources at least cost.

I am asking you to use your leadership to ensure PacifiCorp moves quickly to capture these savings, strengthen reliability, and keep our state at the forefront of America's energy future.

Sincerely,

Sophie Chernosky

Dear Utah Public Service Commission,

As your constituent, I urge you to ensure PacifiCorp saves Utah customers billions of dollars by seizing the opportunity to procure clean-energy resources before federal Inflation Reduction Act tax credits expire.

If PacifiCorp delays, our state will still need new resources, but they will cost at least 30% more -- forcing families and businesses to shoulder billions in unnecessary costs.

Clean energy leads to lower bills. And building solar and wind here in Utah strengthens energy abundance, security, and reliability. It keeps us from relying on volatile fossil-fuel markets, makes our grid more resilient to extreme weather, and ensures that Utah isn't left behind while neighboring states secure billions in savings.

The Aug. 29 filing by Utah Clean Energy before the Utah Public Service Commission shows the scale of potential benefits – over \$150 million in savings for every 100 MW of solar and \$210 million for every 100 MW of wind built. PacifiCorp's 2025 Integrated Resource Plan already identifies the need for 668 MW of solar and 744 MW of wind by 2031. That adds up to over \$2.5 billion in savings by capturing currently available tax credits for wind and solar. What's more, solar and wind bring down fuel costs that have driven PacifiCorp's most recent double-digit rate-increase requests. The only question is whether PacifiCorp will act in time to secure these resources at the lowest possible cost or delay procurement until the tax credits expire.

Please urge the Public Service Commission to accept the Utah for Clean Energy petition to open an investigation into why PacifiCorp has not yet acted to procure these resources at least cost.

I am asking you to use your leadership to ensure PacifiCorp moves quickly to capture these savings, strengthen reliability, and keep our state at the forefront of America's energy future.

Sincerely,

Torrey Hunsaker

Dear Utah Public Service Commission,

Please take advantage of any and all government help to adopt renewable energy. Pushing this off until ecosystems are unrecoverable and families cannot afford to cool or heat their homes is a misuse of power and a misuse of the the renewable energy technology that is at our fingertips. Please be responsible with what is within your power to improve lives- not make more money now.

As your constituent, I urge you to ensure PacifiCorp saves Utah customers billions of dollars by seizing the opportunity to procure clean-energy resources before federal Inflation Reduction Act tax credits expire.

Dear Utah Public Service Commission,

I strongly believe renewable energy is the best for everybody. I believe that if you are seen purposely missing opportunities to keep moving forward with renewable energy the public will have issues with your company and considering you are supplying a product to is I think it's important you understand that it's improved to listen to what the public wants. People are already fed up with how expensive stuff is I don't think they'll put up with more rising cost.

As your constituent, I urge you to ensure PacifiCorp saves Utah customers billions of dollars by seizing the opportunity to procure clean-energy resources before federal Inflation Reduction Act tax credits expire.

Dear Utah Public Service Commission,

This is your chance to make good on your campaign promise to pursue an "all of the above" approach to energy. I personally think we should be doing a lot more clean energy in Utah. The smog, pollution, and political ramifications of coal and gas are killing us.

As your constituent, I urge you to ensure PacifiCorp saves Utah customers billions of dollars by seizing the opportunity to procure clean-energy resources before federal Inflation Reduction Act tax credits expire.

If PacifiCorp delays, our state will still need new resources, but they will cost at least 30% more -- forcing families and businesses to shoulder billions in unnecessary costs.

Clean energy leads to lower bills. And building solar and wind here in Utah strengthens energy abundance, security, and reliability. It keeps us from relying on volatile fossil-fuel markets, makes our grid more resilient to extreme weather, and ensures that Utah isn't left behind while neighboring states secure billions in savings.

The Aug. 29 filing by Utah Clean Energy before the Utah Public Service Commission shows the scale of potential benefits – over \$150 million in savings for every 100 MW of solar and \$210 million for every 100 MW of wind built. Dear Utah Public Service Commission,

Make good choices in our behalf as inflation is being felt by all right now. Keep self interest out of this and do what's best for all now and in the future

As your constituent, I urge you to ensure PacifiCorp saves Utah customers billions of dollars by seizing the opportunity to procure clean-energy resources before federal Inflation Reduction Act tax credits expire.

If PacifiCorp delays, our state will still need new resources, but they will cost at least 30% more -- forcing families and businesses to shoulder billions in unnecessary costs.

Clean energy leads to lower bills. And building solar and wind here in Utah strengthens energy abundance, security, and reliability. It keeps us from relying on volatile fossil-fuel markets, makes our grid more resilient to extreme weather, and ensures that Utah isn't left behind while neighboring states secure billions in savings.

The Aug. 29 filing by Utah Clean Energy before the Utah Public Service Commission shows the scale of potential benefits – over \$150 million in savings for every 100 MW of solar and \$210 million for every 100 MW of wind built. PacifiCorp's 2025 Integrated Resource Plan already identifies the need for 668 MW of solar and 744 MW of wind by 2031. That adds up to over \$2.5 billion in savings by capturing currently available tax credits for wind and solar. What's more, solar and wind bring down fuel costs that have driven PacifiCorp's most recent double-digit rate-increase requests. The only question is whether PacifiCorp will act in time to secure these resources at the lowest possible cost or delay procurement until the tax credits expire.

Please urge the Public Service Commission to accept the Utah for Clean Energy petition to open an investigation into why PacifiCorp has not yet acted to procure these resources at least cost.

I am asking you to use your leadership to ensure PacifiCorp moves quickly to capture these savings, strengthen reliability, and keep our state at the forefront of America's energy future.

Sincerely,

Dear Utah Public Service Commission,

Let's move forward, not backwards.

As your constituent, I urge you to ensure PacifiCorp saves Utah customers billions of dollars by seizing the opportunity to procure clean-energy resources before federal Inflation Reduction Act tax credits expire.

If PacifiCorp delays, our state will still need new resources, but they will cost at least 30% more -- forcing families and businesses to shoulder billions in unnecessary costs.

Clean energy leads to lower bills. And building solar and wind here in Utah strengthens energy abundance, security, and reliability. It keeps us from relying on volatile fossil-fuel markets, makes our grid more resilient to extreme weather, and ensures that Utah isn't left behind while neighboring states secure billions in savings.

The Aug. 29 filing by Utah Clean Energy before the Utah Public Service Commission shows the scale of potential benefits – over \$150 million in savings for every 100 MW of solar and \$210 million for every 100 MW of wind built. PacifiCorp's 2025 Integrated Resource Plan already identifies the need for 668 MW of solar and 744 MW of wind by 2031. That adds up to over \$2.5 billion in savings by capturing currently available tax credits for wind and solar. What's more, solar and wind bring down fuel costs that have driven PacifiCorp's most recent double-digit rate-increase requests. The only question is whether PacifiCorp will act in time to secure these resources at the lowest possible cost or delay procurement until the tax credits expire.

Please urge the Public Service Commission to accept the Utah for Clean Energy petition to open an investigation into why PacifiCorp has not yet acted to procure these resources at least cost.

I am asking you to use your leadership to ensure PacifiCorp moves quickly to capture these savings, strengthen reliability, and keep our state at the forefront of America's energy future.

Sincerely,

Dear Utah Public Service Commission,

As your constituent, I urge you to ensure PacifiCorp saves Utah customers billions of dollars by seizing the opportunity to procure clean-energy resources before federal Inflation Reduction Act tax credits expire.

If PacifiCorp delays, our state will still need new resources, but they will cost at least 30% more -- forcing families and businesses to shoulder billions in unnecessary costs.

Clean energy leads to lower bills. And building solar and wind here in Utah strengthens energy abundance, security, and reliability. It keeps us from relying on volatile fossil-fuel markets, makes our grid more resilient to extreme weather, and ensures that Utah isn't left behind while neighboring states secure billions in savings.

The Aug. 29 filing by Utah Clean Energy before the Utah Public Service Commission shows the scale of potential benefits – over \$150 million in savings for every 100 MW of solar and \$210 million for every 100 MW of wind built. PacifiCorp's 2025 Integrated Resource Plan already identifies the need for 668 MW of solar and 744 MW of wind by 2031. That adds up to over \$2.5 billion in savings by capturing currently available tax credits for wind and solar. What's more, solar and wind bring down fuel costs that have driven PacifiCorp's most recent double-digit rate-increase requests. The only question is whether PacifiCorp will act in time to secure these resources at the lowest possible cost or delay procurement until the tax credits expire.

Please urge the Public Service Commission to accept the Utah for Clean Energy petition to open an investigation into why PacifiCorp has not yet acted to procure these resources at least cost.

I am asking you to use your leadership to ensure PacifiCorp moves quickly to capture these savings, strengthen reliability, and keep our state at the forefront of America's energy future.

Sincerely,

Erin Rawley

To: Utah Public Service Commission &lt;psc@utah.gov&gt;

Dear Utah Public Service Commission,

As your constituent, I urge you to ensure PacifiCorp saves Utah customers billions of dollars by seizing the opportunity to procure clean-energy resources before federal Inflation Reduction Act tax credits expire.

If PacifiCorp delays, our state will still need new resources, but they will cost at least 30% more -- forcing families and businesses to shoulder billions in unnecessary costs.

Clean energy leads to lower bills. And building solar and wind here in Utah strengthens energy abundance, security, and reliability. It keeps us from relying on volatile fossil-fuel markets, makes our grid more resilient to extreme weather, and ensures that Utah isn't left behind while neighboring states secure billions in savings.

The Aug. 29 filing by Utah Clean Energy before the Utah Public Service Commission shows the scale of potential benefits – over \$150 million in savings for every 100 MW of solar and \$210 million for every 100 MW of wind built. PacifiCorp's 2025 Integrated Resource Plan already identifies the need for 668 MW of solar and 744 MW of wind by 2031. That adds up to over \$2.5 billion in savings by capturing currently available tax credits for wind and solar. What's more, solar and wind bring down fuel costs that have driven PacifiCorp's most recent double-digit rate-increase requests. The only question is whether PacifiCorp will act in time to secure these resources at the lowest possible cost or delay procurement until the tax credits expire.

Please urge the Public Service Commission to accept the Utah for Clean Energy petition to open an investigation into why PacifiCorp has not yet acted to procure these resources at least cost.

I am asking you to use your leadership to ensure PacifiCorp moves quickly to capture these savings, strengthen reliability, and keep our state at the forefront of America's energy future.

Sincerely,

Dear Utah Public Service Commission,

I urge Pacific Corp to move now and follow their own 2025 Integrated Resource Plan which shows the need for hundreds of megawatts of new solar and wind over the next five years. This Clean Energy should be purchased now while we can still take advantage of the IRA credits that will cost RMP customers millions in unnecessary costs. We customers cannot afford this and should not have to pay for PacificCorps mistakes if they don't move now.

As your constituent, I urge you to ensure PacifiCorp saves Utah customers billions of dollars by seizing the opportunity to procure clean-energy resources before federal Inflation Reduction Act tax credits expire.

If PacifiCorp delays, our state will still need new resources, but they will cost at least 30% more -- forcing families and businesses to shoulder billions in unnecessary costs.

Clean energy leads to lower bills. And building solar and wind here in Utah strengthens energy abundance, security, and reliability. As your constituent, I urge you to ensure PacifiCorp saves Utah customers billions of dollars by seizing the opportunity to procure clean-energy resources before federal Inflation Reduction Act tax credits expire.

If PacifiCorp delays, our state will still need new resources, but they will cost at least 30% more -- forcing families and businesses to shoulder billions in unnecessary costs.

Clean energy leads to lower bills. And building solar and wind here in Utah strengthens energy abundance, security, and reliability. It keeps us from relying on volatile fossil-fuel markets, makes our grid more resilient to extreme weather, and ensures that Utah isn't left behind while neighboring states secure billions in savings.

The Aug. 29 filing by Utah Clean Energy before the Utah Public Service Commission shows the scale of potential benefits – over \$150 million in savings for every 100 MW of solar and \$210 million for every 100 MW of wind built. PacifiCorp's 2025 Integrated Resource Plan already identifies the need for 668 MW of solar and 744 MW of wind by 2031. That adds up to over \$2.5 billion in savings by capturing currently available tax credits for wind and solar. What's more, solar and wind bring down fuel costs that have driven PacifiCorp's most recent double-digit rate-increase requests. The only question is whether PacifiCorp will act in time to secure these resources at the lowest possible cost or delay procurement until the tax credits expire.

Please urge the Public Service Commission to accept the Utah for Clean Energy petition to open an investigation into why PacifiCorp has not yet acted to procure these resources at least cost.

I am asking you to use your leadership to ensure PacifiCorp moves quickly to capture these savings, strengthen reliability, and keep our state at the forefront of America's energy future.

Sincerely,

Dear Utah Public Service Commission,

Renewable energy is the future

As your constituent, I urge you to ensure PacifiCorp saves Utah customers billions of dollars by seizing the opportunity to procure clean-energy resources before federal Inflation Reduction Act tax credits expire.

If PacifiCorp delays, our state will still need new resources, but they will cost at least 30% more -- forcing families and businesses to shoulder billions in unnecessary costs.

Clean energy leads to lower bills. And building solar and wind here in Utah strengthens energy abundance, security, and reliability. It keeps us from relying on volatile fossil-fuel markets, makes our grid more resilient to extreme weather, and ensures that Utah isn't left behind while neighboring states secure billions in savings.

Dear Utah Public Service Commission,

I have watched Utahns, citizens and legislatures alike, toil with energy policy since I was a child. Time and again, I have watched decision makers hurt their constituents through lack of action, in order to protect profit and precedent.

There is no grey area here. It is time to choose better, to choose your constituents over greed. We need to invest in the future. The cost is too great to delay.

As your constituent, I urge you to ensure PacifiCorp saves Utah customers billions of dollars by seizing the opportunity to procure clean-energy resources before federal Inflation Reduction Act tax credits expire.

If PacifiCorp delays, our state will still need new resources, but they will cost at least 30% more -- forcing families and businesses to shoulder billions in unnecessary costs.
