Hello There,

As long as RMP continues to insist on burning coal to power our grid, it should hold the sole responsibility for wildfire insurance, & not charge its customers any kind of rate hike (even a small one). We all know that using 19th century technology (like coal) to power the 21st century is absurd, expensive, & damaging to the atmosphere; & such action increases the likelihood of wildfire. These facts remain true even when the coal lobby lies to the People. No more coal, no insurance rate hike, while Solar is the most obvious source of power because it's actually free from the sky (& batteries are getting so much better). Which I know probably scares RMP's bottom line, which is fine with me because it's great for our (the costumer's) bottom lines.

Peace,
Jeremy

Hello Again,

Please, for the love of god, do not let Utah be a place where nuclear bombs are made or tested. The world doesn't need more intercontinental ballistic missiles. Pete Hegseth is a war monger. Don't let him turn our state into his vision of a world built on fear, lies, & rage.

Let Utah remain loving, kind, open to those of us who care for each other & those most interested in a future where Human Beings figure out a way to share this planet we call Earth. That's what I learned growing up in Utah.

Peace,
Jeremy
