To Whom It May Concern:

RE: Docket Number 25-035-61

Rocky Mountain Power is proposing an increase in customer electricity rates for a period of about 10 years. Money from this increase is to fund a wildfire liability account.

Since wildfires are fueled by increased temperatures and decreased rain and snowfall, I object to this increase in electricity rates because Rocky Mountain is still using fossil fuels in some Utah plants to generate electricity.

I will support the rate increase for a wildfire liability fund only if it is tied to Rocky Mountain agreeing to significantly increase investments in clean energy to produce and distribute electricity.

Sincerely,

Ann Johnson, [893 N Evelyn Street, Farmington, UT 84025](#)

To Whom It May Concern,

I understand Rocky Mountain Power wants to raise electric rates, for up to 10 years, to fund a wildfire liability account.

Rocky Mountain Power should be held accountable to promote Clean Energy so the risk of wildfires is mitigated. Tax payers should not pay a wildfire liability account if Rocky Mountain Power is not aggressively pursuing Clean Energy measures.

Climate change is the reason we have such devastating conflagrations! We owe it to ourselves and to future generations to address climate change!

Thank you for your consideration.

Hello,

I am writing to request that Rocky Mountain Power demonstrate their commitment to alternate forms of clean energy production (such as solar and wind), storage and grid resilience before increasing energy costs for consumers related to increasing RMP's wildfire liability fund.

Show us consumers that you are doing everything you can to reduce your use of fossil fuels that contribute to climate change and increased wildfire risk rather than just continuing the use of fossil fuels as usual.

Thank you,  
Aline Devaud
