I oppose at rate hike from Rocky Mountain Power until they full stop, stop using polluting coal and oil to run all of their power plants and invest in only renewable energy ways of production. I made a heacy investment into solar power with battery backup this summer. This needs to be nation wide despite the current administration trying to promote polluting energy production at the expense of our environment and health.

Also, alternative wind production methods are now available that are safer for birds. This needs to be looked into. Harmony wind turbines have some novel ideas.

Thank you, Stacy C Higbee
