Subject: RMP Surge Event

To:

Hi -

Dear Utah Public Service Commission,

I am seeking guidance on how best to proceed regarding a power surge that affected multiple homes in my neighborhood and caused thousands of dollars in damage. I filed Claim #7494434 with Rocky Mountain Power, but despite repeated follow-ups, I have received no meaningful response, and the denial I did receive cited tariff language that does not appear applicable to the circumstances.

This was not a routine fluctuation; multiple neighboring homes experienced significant damage at the same moment, which strongly suggests a failure within Rocky Mountain Power's distribution system. Their own representative initially indicated that further investigation was required, but no findings or explanation have been provided.

Could you please advise on the appropriate next steps for bringing this matter to the Commission's attention? I am happy to provide documentation, correspondence, and the relevant tariff excerpt the company used in its denial.

Thank you for your time and assistance.

To: Utility Complaints

Thank you for confirming receipt of my complaint.

For your investigation, the neighbors I am aware of who experienced simultaneous issues are:

- Brent Coburn
- Cookie Hart
- Brian Barker

I presume you have access to the full correspondence and documentation already provided, but please let me know if you require anything further.

I also wanted to specifically address the 15-minute interval report I received, which was used to explain why the utility was not at fault. I believe an instantaneous surge, which would not be captured accurately by an average voltage report, is the more likely cause of the severe, simultaneous damage across multiple homes. As I understand it, our meters only log stable voltage values, and not spikes or surges.

Best regards,

Chimso Onwuegbu

Hi Kami,

The company has responded to the customer regarding their damage claim. Unfortunately, the company denied the customer's claim for damages. A copy of the company's response to the customer has been attached for your review, along with a copy of the company's claims representative's denial of coverage letter to the customer.

The company investigated the events at the customer's site on the date of loss and determined that there was no evidence of any company negligence resulting in damages to the customer's property.

The customer is responsible for providing proper protection equipment to protect their property from electric damage that may occur due to their interconnection to the electric infrastructure. A copy of Rule 5, which references this requirement, has been attached for your review.

The company cannot be liable for any damages that are a result of events that are beyond the company's control and the lack of protection to the customer's property.

Please let us know if you have any questions or concerns.

Thank you!
