

DPU Data Request 1.4

Please provide the calculation for the 20 percent, which would include a table of all owned and contracted resources with their associated generation, also outlining which ones are renewable resources or the ability to filter for that.

Response to DPU Data Request 1.4

As discussed in the Direct Testimony of Company witness, Craig M. Eller, filed in Docket No. 24-035-04 (general rate case (GRC)) on June 28, 2024, lines 219 through 231, the Company proposed to set an initial percentage of 20 percent for the first program year. The Company chose this number as it reasonably approximates the percentage of renewable energy in the Company's resource portfolio for which the Company has entitlement to the renewable attributes and has Western Renewable Energy Generation Information System (WREGIS) certificates available to be retired. The data the Company reviewed in determining the 20 percent figure is provided as Confidential Attachment DPU 1.4. As discussed by Craig Eller in the GRC, the 20 percent will be used as the initial percentage and reviewed annually for subsequent program years.

The Company notes that the Public Service Commission of Utah (UPSC) approved the new program in its order on April 25, 2025 in the GRC, including the Company's proposal for the initial program year, calendar year 2026, to offer renewable energy credit (REC) retirements equal to 20 percent of the participating load.
